i

¹ Median Age by Calendar Year

² Based on 9 months data (6th April - 31st December 2009)

Although the average age has increased from 37 in 2000 to 41 in 2009, it is possible that this is due to a compositional effect. That is, average age of the population has increased.

Population estimates, published by the Office for National Statistics, state that 'In mid-2009 the average age of the population was 39.5 years, up from 37.3 in 1999.' (<u>http://www.statistics.gov.uk/cci/nugget.asp?id=6</u>)

It is expected that, if the composition of the population is the same as for bankrupts, the average age for the population would be lower, as it includes individuals under 18 years of age.

The average age of someone with a DRO in April-December 2009 is comparable to that of a bankrupt.

Percentage per Age Group

¹ Based on 9 months data (6th April - 31st December 2009)

On releasing data for bankruptcies by age and gender, there was some focus on how the number of bankruptcies in particular age groups (notably under 25 and 65+) had increased dramatically.

Looking at the distribution of bankruptcies by age group in percentage terms shows that the distribution has changed very little between 2000 and 2009. The slight increase in age groups 35-44 and 45-54 could again be explained by the compositional difference in the base population, as before.

	Bankruptcies									
Age Group	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009

Rate per 10,000 Adult Population per Age Group

This is calculated on the same basis as how we calculate the regional rates.

Generally, the rate in each age group has followed the same trend as that for all bankrupts.

The rate for Under 25's has decreased from 2006 to 2009, compared to all other age groups, where the rate has increased.

This hasn't been done for DROs as the numbers are so small.

Document 2

Notes

- 1. Classifying individuals into age groups is done using the date of birth that the individual provides.
- 2. Classifying individuals into gender groups is done using the gender information the individual provides.
- 3. Numbers of cases reported in these tables are new cases and are based on the date of the order.

Numbers presented in these tables are not consistent with the official, headline National Statistics published a

- extracted from a live database at a different point in time and on a slightly different basis.
- 5. For general notes on individual insolvency statistics in England & Wales see the official quarterly statistics at: www.insolvency.gov.uk/statistics
