

STATISTICAL BULLETIN: PUBLIC SPENDING STATISTICS APRIL 2012

This release presents updated Public Spending data for the years 2006-07 to 2010-11. All data in this release are National Statistics and are on an outturn basis. Further background detail is found in the accompanying material published alongside this release. This is the second release in a new format with expanded content following on from the changes first implemented in our February 2012 release. We welcome any feedback on this release at: statistics-enquiries@hmtreasury.gsi.gov.uk.

We intend to continue to improve the new format for the Annual PESA release in July.

HM Treasury Public Spending Statistics provide a range of information about public spending, using two related frameworks as shown in the table on page 7 below. Further detailed explanations are provided in the methodology annex to this bulletin.

IN THIS RELEASE

Key Points in this release	. 2
Chart 1: Real terms trends in public spending	
Chart 2: Trends in Public Spending as a percentage of GDP	. 5
Overview of the Data in this release	. 7
Budgeting statistics	. 7
Expenditure on services Statistics	. 8
Tables	. 9

Key Points in this release

- Total resource DEL (spending within fixed Departmental Expenditure Limits) was £345.8 bn in 2010-11, an increase of 3.8 per cent on the previous year in nominal terms. This is the lowest annual rate of increase for the period covered by this release, a reflection in part of the £6.2bn of savings announced by the Government in May 2010.¹
- During the recession, as GDP shrank but spending increased, Total Managed Expenditure (a measure of total government spending) took an increasingly large share of national income. In 2010-11 TME was 46.6 per cent of GDP, a slight fall from the peak of 47.6 per cent seen in 2009-10 (Table 8b).

KEY REVISIONS IN THIS RELEASE

This release incorporates Scottish central and local government final outturn data for 2010-11. Some departments, notably the Northern Ireland Executive and the Department for Education, have revised the economic breakdown of their outturn data. This affects Table 9. The Department for Business, Innovation and Skills has also revised non-cash outturn data in respect of student loans for 2007-08 to 2009-10. This affects Tables 1, 2 and 3. However these revisions are relatively minor and do not substantively change any of the data in the release, or have a significant impact on any of the trends shown.

UPCOMING REVISIONS IN NEXT RELEASE

The next Treasury Public Spending National Statistics release will be in July. There are no major changes pending to the frameworks and standards which will affect this release.

FORTHCOMING CHANGES TO THE SPENDING FRAMEWORKS USED IN THIS RELEASE

The Public Spending National Statistics releases can be affected by public sector classification decisions, changes to the Budgeting framework, and by large one-off transactions.

• **Classification decisions** As new bodies are created and existing ones wound up, the boundary of what is contained in the public sector changes. Additionally, some bodies move across the boundaries both within the public sector and between the public and private sectors. Public sector classification decisions are made by the Office for National Statistics.

¹ http://www.hm-treasury.gov.uk/d/press_04_10.pdf Box 3.B in PESA 2010 set out the effect of the savings on departmental budgets: http://www.hm-treasury.gov.uk/pespub_pesa10.htm

- Changes to the budgeting framework HM Treasury maintains the budgeting framework in order to ensure effective control of the spending of government departments. Each year the Treasury publishes a new version of the Consolidated Budgeting Guidance² which explains the system for expenditure control. Changes to the budgeting guidance may affect the presentation of the tables in this release.
- Large one-off transactions or events These statistics can be affected by large one-off events or financial transactions. Whenever this occurs we will explain the impact in the text within our release.

The following items will have a material effect on the figures contained in future Public Spending National Statistics releases:

- The one-off transfer of assets from the Royal Mail Pension Plan to the public sector will reduce Total Managed Expenditure by £28 bn in 2012-13, with offsetting increases in future years as the public sector will be responsible for paying out Royal Mail Pensions.
- For 2012-13, the treatment of provisions, impairments and bad debts in AME by some regulators has been revised to bring them inside DEL.

PUBLIC SPENDING STATISTICS PUBLICATIONS SCHEDULE 2012-13

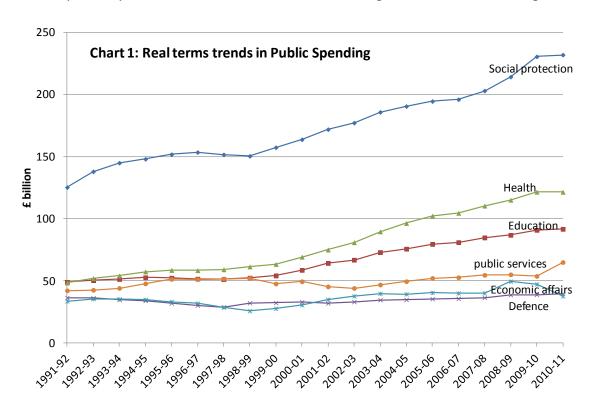

- JULY 2012 The July Public Spending Statistics release contains the first publication of departmental spending outturn for the 2011-12 financial year. This release contains the widest range of data. Local authority data and much of the data from the devolved administrations are still provisional at this stage of the year. This is the main release within each financial year.
- OCTOBER 2012 The Country and Regional Analysis is published in October each year. Additionally, updates to the key series of the Public Spending Statistics are published.
- FEBRUARY 2013 This release contains updates to the key Public Spending Statistics series. It includes updated data for English and Welsh local authorities for the previous financial year.
- APRIL 2013 This release contains updates to the key Public Spending Statistics series. April is the first time in which full outturn for the previous financial year is published, incorporating final data for all local authorities and devolved administrations.

CHARTS

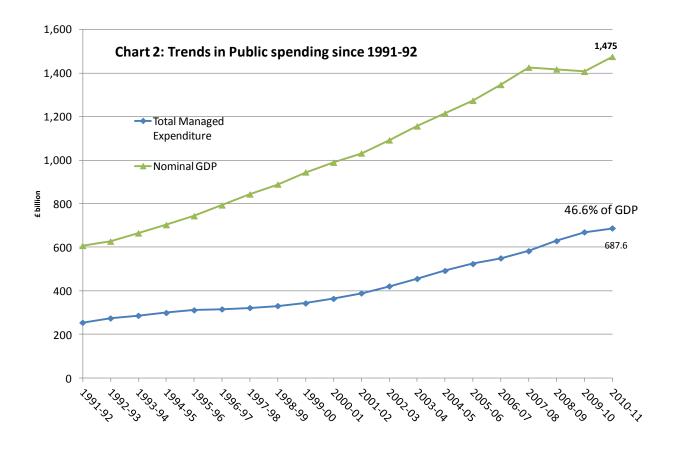

CHART 1 shows trends in public spending in real terms according to the UN defined Classification of the Functions of Government (COFOG) framework. This breakdown allows users to see trends in expenditure over time without changes in the way government is organised (also known as machinery of government changes) introducing distortions. Departmental responsibilities have changed substantially since the early 1990s, for example, making it difficult to create consistent long-run time series. The COFOG framework enables these comparisons over time.

It is important to note that in most cases spending by function does not equate to spending by a single department. Spending within the health function, for example, represents expenditure by the devolved administrations as well as by the Department of Health and other central government departments. In the same way, a large proportion of education spending is carried out by local authorities, and not directly by the Department for Education.

Over the past 20 years the health function has had the highest rate of real terms growth.

CHART 2 shows trends in overall spending compared with overall nominal GDP. The ratio between TME and GDP is a measure of the size of government relative to the rest of the economy.

BACKGROUND

Tables 1 to 7 show central government departmental budgets, which are the aggregates used by the Government to plan and control expenditure. They cover departments' own spending as well as support to local government and public corporations. They are consistent with "Estimates" voted by Parliament and broadly consistent with departmental Resource Accounts, which are based on commercial International Financial Reporting Standards (IFRS) adapted for the Public Sector.

Budgets are divided into Departmental Expenditure Limits (DEL), which are firm plans for three or four years, and Annually Managed Expenditure (AME), covering spending which is demand-led, less predictable and more difficult to control. Table 1 shows the aggregate position for all departments and all types of spending with some of the main types of spending shown separately. Table 7 shows in detail how the budgeting data is used to construct the Total Managed Expenditure (TME) figures published by the Office for National Statistics. These are based on National Accounts concepts and are used in the aggregates which underlie the Government's fiscal policy.

Tables 8 to 9 present spending under the "expenditure on services" framework. This is based on National Accounts definitions and covers the whole of the public sector. It therefore has wider coverage than the budgeting framework and is also more stable over time.

Tables 8, 8a and 8b show public sector expenditure on services broken down by function over a period of 20 years, allowing long-term trends to be identified. Table 9 presents data broken down by economic categories such as pay or grants.

OVERVIEW OF THE DATA IN THIS RELEASE

Spending frameworks used in HM Treasury spending publications

Budgeting

This framework provides information on central government departmental budgets, which are the aggregates used by the Government to plan and control expenditure. It covers departmental own spending as well as support to local government and public corporations.

Expenditure on services

This framework is used in Treasury publications for statistical analysis. It is based on National Accounts definitions and covers spending by the whole of the public sector. It therefore has wider coverage than the budgeting framework and is also more stable over time.

BUDGETING STATISTICS

DEPARTMENTAL EXPENDITURE LIMITS (DEL)

- Total resource DEL was £345.8bn in 2010-11, an increase of 3.8 per cent on the previous year. This is the lowest rate of increase for the period covered by this release, a reflection in part of the £6.2bn of savings announced by the Government in May 2010.
- Depreciation in resource DEL rose by 48 per cent in 2010-11. This was mainly due to a decrease in the value of the Student Loan book within BIS's budget, and the write-off of equipment by the Ministry of Defence.
- Total capital DEL fell by 12.5 per cent in 2010-11, following an increase of 17.4 per cent in 2009-10. This is a reflection of the decision to bring forward some capital spending from 2010-11 to 2009-10 and the savings announced in May 2010¹.

ANNUALLY MANAGED EXPENDITURE (AME)

Net public service pensions fell to -£78.1bn in 2010-11, from £1.5bn in 2009-10. The reduction has been caused by the decision to use the Consumer Prices Index (CPI) rather than the Retail Prices Index (RPI) for the indexation of public service pensions and the consequent reduction in the size of future liabilities. The effect of this on the major pension schemes (teachers, NHS, civil service and armed forces) is shown in the appropriate departmental budget in Table 3. As liabilities are not included in the calculation of TME, there is an offset within the accounting adjustments to remove them (see Table 7 for details).

- Financial sector interventions within resource departmental AME stood at -£14.6bn in 2010-11. This represents an increase in the value of the Bank of England Asset Purchase Facility Fund. The value of this can change significantly as a result of movements in gilts' prices.³ Receipts of £3.0bn within capital departmental AME are the result of the repayment of loans to the Government and the Financial Services Compensation Scheme.⁴
- Central government gross debt interest payments rose to £42.8bn in 2010-11 from £30.2bn in 2009-10, as a result of increased government borrowing.

EXPENDITURE ON SERVICES STATISTICS

- During the recession, as GDP shrank but spending increased, TME took an increasingly large share of national income. In 2010-11 TME was 46.6 per cent of GDP, a slight fall from the peak of 47.6 per cent seen in 2009-10 (Table 8b).
- In 2010-11 public expenditure on health was equal to 8.2 per cent of GDP, compared to 5.1 per cent in 1991-92. Over the same period, education spending has increased from 5.2 per cent to 6.2 per cent of GDP. These reflect a mix of demographics and the policy priorities of successive governments.
- The share of GDP taken by public sector debt interest payments increased to 2.9 per cent in 2010-11 from 2.2 per cent in the previous year reflecting increases in the stock of debt. This is still below the peak of up to 3.6 per cent seen in the mid 1990s, when interest rates were significantly higher than now (Table 8b).
- In real terms (i.e. after adjusting for the effect of inflation) spending on social protection was £232.0 billion in 2010-11, up from £230.6 billion in the previous year. Health spending (including spending by central government departments and devolved administrations) was £121.4 billion in 2010-11, compared to £121.5 billion spent in 2009-10. Education spending was £91.3 billion in 2010-11, up from £90.8 billion in 2009-10 (Table 8a). Financial sector interventions are scored in the Economic Affairs function. Within Table 9 they appear as capital grants and income from sales of goods and services.⁵

³ For further information see HM Treasury's annual report: http://www.hm-treasury.gov.uk/d/annual_report_accounts140711.pdf

⁴ Further details on the treatment of financial sector interventions in budgets can be found in Box 2.A of PESA 2011: http://www.hm-treasury.gov.uk/pespub_pesa11.htm

⁵ Details of financial sector interventions within expenditure on services can be found in Box 5.A of PESA 2011.

(1) As part of the Spending Review 2010 DEL was presented less depreciation. This is continued in this table to allow comparison. (2) Tax credits include working tax credits, stakeholder pension credits and Child Tax Credits. Child allowances paid as part of Income Support and Jobseekers' Allowance are shown within social security benefits. Tax credits include elements that are treated as negative tax in National Accounts, see Box 1.A in Chapter 1 of PESA 2011.

(3) The main pension schemes are reported under FRS17 accounting requirements, the reconciliation to National Accounts is explained in Annex D of PESA 2011.

(4) Transactions from 2008-09 onwards have been affected by financial sector interventions, see Box 2.A in Chapter 2 of PESA 2011.
(5) Local government grants to public corporations are now subtracted from locally financed expenditure rather than accounting adjustments. This is consistent with the OBR's treatment of the grants in their Economic and Fiscal Outlook - March 2012
(6) This excludes the temporary effects of banks being classified to the public sector. See Box 5.A in Chapter 5 of PESA 2011.

(1) Local government grants to public corporations are now subtracted from locally financed expenditure. This is consistent with the OBR's

Public Spending Statistics April 2012 treatment of the grants in their Economic and Fiscal Outlook - March 2012 (2) Reflects timing difference between the latest COINS and other source data and the data underlying the Public Sector Finances statistical bulletin. These mainly result from revisions policy and issues with late corrections to COINS data in the early years.

(1) GDP until 2010-11 is consistent with the latest figures from the Office for National Statistics (published 21December 2011).

(2) Transactions in 2008-09 onwards have been affected by financial sector interventions. Details are provided in Box 5.A in PESA 2011.

(3) This excludes the temporary effects of banks being classified to the public sector. See Box 5.A in PESA 2011 for details.

TABLE 9 PUBLIC SECTOR EXPENDITURE ON SERVICES BY ECONOMIC CATEGORY, 2006-07 TO 2010-11

£million
