HIV Position Paper Review

Online Consultation

Introduction

The world has made huge progress against the HIV epidemic in the 30 years since AIDS was first identified. New infections have fallen by 19% since 1999 and over 8 million people are on anti-retroviral treatment, more than a tenfold increase over 5 years. Africa has cut AIDS-related deaths by one third in the past six years. Yet 34 million people are living with HIV today. Half of these people do not know their HIV status. Women and girls remain disproportionately affected and groups often at highest risk of HIV infection are too often neglected from the response. There is still much to do.

In May 2011, the UK published 'Towards zero infections: the UK's position paper on HIV in the developing world'. This set out the UK's strategic priorities and commitment to results up to 2015. The UK is seeking to review its progress against results and its strategic priorities this year. The purpose of this survey is to get a richer understanding from a number of perspectives of how DFID's work in this area has led to results based on your experience of having partnered with us and/or having seen our work in action at a global, national or local level.

1 About you

It helps us in our research to know a little about you. We won't share this information with anyone - and we don't need your name, so you can be sure it is anonymous.

Are you? (You can select more than one answer)

- Academic or researcher
- Civil society/NGO
- Representing a network of people living with HIV
- Representing a network of key affected populations
- Staff member of an international organisation or foundation
- Staff member of a bilateral donor
- Staff member of a national government
- Parliamentarian
