Call for Evidence

Managing Radioactive Waste Safely: Review of the Siting Process for a Geological Disposal Facility

Response form

13 May 2013

Call for Evidence

Please use this form to answer questions on the Call for Evidence on Managing Radioactive Waste Safely: Review of the Siting Process for a Geological Disposal Facility.

The closing date for the submission of responses is **10 June 2013**.

Responses can be returned by email (preferable) or post.

Email address: radioactivewaste@decc.gsi.gov.uk

Or by post to: The Managing Radioactive Waste Safely team
Department of Energy and Climate Change
55 Whitehall
London
SW1A 2EY

In order to help us analyse responses, please provide details of your organisation.

When the call for evidence ends, we may publish or make public the evidence submitted. Also, members of the public may ask for a copy of responses under freedom of information legislation.

If you do not want your response - including your name, contact details and any other personal information – to be publicly available, please say so clearly in writing when you send your response to the call for evidence. Please note, if your computer automatically includes a confidentiality disclaimer, that will not count as a confidentiality request.

Please explain why you need to keep details confidential. We will take your reasons into account if someone asks for this information under freedom of information legislation. But, because of the law, we cannot promise that we will always be able to keep those details confidential.

The responses to this Call for Evidence will inform a public consultation that will follow in the autumn.

We would like to keep stakeholders who are interested in the MRWS process up to date on developments. If you would like to be kept up to date please sign up at the end of the form.

Introduction

1. The UK Government's policy for the long-term management of higher-activity radioactive waste is geological disposal¹. In 2008 the Managing Radioactive Waste Safely (MRWS) White Paper² was published which outlined a framework for implementing geological disposal based on the principles of voluntarism and partnership.
2. Three local authorities formally expressed an interest in the MRWS programme: Copeland and Allerdale Borough Councils, and Cumbria County Council. In January 2013, the three local authorities voted on whether to proceed to stage 4 of the process. The two boroughs voted in favour, but the county voted against. The Government had in 2011 given a specific undertaking that the existing site-selection process would only continue in west Cumbria if there was agreement at both borough and county level. The county's decision therefore ended the existing site selection process in west Cumbria.
3. Shepway District Council in Kent had also taken soundings from local residents, but subsequently decided against making a formal expression of interest in the current MRWS process.
4. The Government remains firmly committed to geological disposal as the right policy for the long-term safe and secure management of higher-activity radioactive waste. The Government also continues to hold the view that the best means of selecting a site for a geological disposal facility (GDF) is an approach based on voluntarism and partnership.
5. Evidence from abroad shows that this approach can work, with similar waste disposal programmes based on these key principles making good progress in countries like Canada, Finland, France and Sweden.
6. The fact that two local authorities in west Cumbria voted in favour of continuing the search for a potential site for a GDF demonstrates that communities recognise the substantial benefits that are associated with hosting such a facility – both in terms of job creation and the wider benefits associated with its development.

Purpose of the call for evidence

7. In line with the Secretary of State's written Ministerial statement of 31 January 2013³, Government has been considering what lessons can be learned from the experiences of

¹ Radioactive waste disposal is a devolved matter. The Scottish Government has a separate policy and supports long-term interim storage and an on-going programme of research and development. The Welsh Government has reserved its position on geological disposal of radioactive waste while continuing to play an active part in the MRWS process. The Department of the Environment in Northern Ireland supports the MRWS programme.

the MRWS programme in west Cumbria and elsewhere. We are now inviting views on the site selection aspects of the ongoing MRWS programme in this call for evidence, particularly from those who have been engaged in (or have been interested observers of) the MRWS process to date. The responses to this call for evidence will inform a consultation that will follow later in the year.

Background

8. Higher-activity radioactive wastes are produced as a result of the generation of electricity in nuclear power stations, from the associated production and processing of the nuclear fuel, from the use of radioactive materials in industry, medicine and research, and from military nuclear programmes.
9. As one of the pioneers of nuclear technology, the UK has accumulated a substantial legacy of higher activity radioactive materials. Some of it has already been processed and placed in safe and secure interim storage on nuclear sites. However, most will only become waste over the next century or so as existing facilities reach the end of their lifetime and are decommissioned and cleaned up safely and securely.
10. These higher-activity wastes can remain radioactive, and thus potentially harmful, for hundreds of thousands of years. Modern, safe and secure interim storage can contain all this material – but this method of storage requires on-going human intervention to monitor the material and to ensure that it does not pose any risk to human or environmental health. While the Government believes that safe and secure interim storage is an effective method of managing waste in the short to medium term, the Government is committed to delivering a permanent disposal solution.
11. In October 2006, following recommendations made by the independent Committee on Radioactive Waste Management, the Government announced its policy of geological disposal, preceded by safe and secure interim storage. The Government subsequently announced that it would pursue a policy of geological disposal with site selection on voluntarism and partnership. This remains Government policy.

Geological disposal

12. Geological disposal involves isolating radioactive waste in an engineered facility deep inside a suitable rock formation to ensure that no harmful quantities of radioactivity ever reach the surface environment. It is a multi-barrier approach, based on placing packaged wastes in engineered tunnels at a depth of between 200 and 1000m underground, protected from disruption by man-made or natural events.
13. Geological disposal is internationally recognised as the preferred approach for the long-term management of higher-activity radioactive waste. It provides a long-term, safe solution to radioactive waste management that does not depend on on-going human intervention.

Response form

Please use this form to respond to this call for evidence on Managing Radioactive Waste Safely: Review of the Siting Process for a Geological Disposal Facility.

The closing date for the submission of responses is **10 June 2013**.

Responses can be returned by email (preferable) or post.

Would you like to be kept informed of developments with the MRWS programme?

Yes

Would you like your response to be kept confidential? If yes please give a reason

No

The Government is interested in your views on the geological disposal facility site selection process outlined in the 2008 Managing Radioactive Waste Safely (MRWS) White Paper. To assist us you may wish to consider the following issues in your response:

- What aspects of the site selection process in the MRWS White Paper do you think could be improved and how?
- What do you think could be done to attract communities into the MRWS site selection process?
- What information do you think would help communities engage with the MRWS site selection process?

- 1) The information provided to communities regarding available options for safe storage of nuclear waste in West Cumbria failed to be updated as new evidence became available during the lifetime of the consultation process eg the online video of what other countries were doing was not updated to reflect this new evidence.
- 2) The information provided to communities regarding emerging options for processing (rather than storing) spent waste was not analysed or consulted on during the lifetime of the consultation process.
- 3) The consultation process was undermined by focusing on voluntarism before acknowledging that the criteria for Safe Storage of Nuclear Waste should be determined by geological suitability and sound engineering solutions to provide a multi barrier protection plan.
- 4) By 2013 the consultation process lacked the openness and transparency needed and ultimately failed to promote a consultation process based on trust. The consultation process had not been updated to engage with the general public through social media
- 5) The apparent 'grooming' of leading organisations within Cumbria by the Nuclear Industry and subsequent pressure brought to bear by the DECC and Baroness Verma also indicated that voluntarism was simply a smokescreen for the true intention of imposing deep disposal of nuclear waste on communities in Cumbria.
- 6) All the relevant bodies associated with the Nuclear Industry and the safe storage of nuclear waste should have a balanced membership which can provide an open and transparent challenge on the basis of being a "critical friend". This was often not the case.
- 7) The process was further undermined by the evidence provided by Prof Smythe and Hazeldine and the statement from Deerlove that it would be highly unlikely that any suitable site for deep disposal of Nuclear Waste would be found in Cumbria
- 8) It became apparent during the consultation process that there were geologically better options for the storage of Nuclear Waste, in the UK, than Cumbria and in particular Copeland and Allerdale further undermining trust and public confidence in the consultation process.

- 9) The consultation process focused on deep disposal at the expense of any other solution including the development of an interim storage facility; shallow or sub surface disposal with an engineering solution that included the possibility of access and spent waste being retrievable should circumstances change or new technology be developed for new uses of the waste or new safer storage options be developed.**
- 10) It is now essential that work begins as a matter of urgency to put the existing intermediate and high level waste into a safe form to store in an intermediate storage facility.**
- 11) The community benefit package was not fully explored and many were of the opinion that it constituted a bribe rather than an acknowledgement that Cumbria already holds the vast majority of the Country's Nuclear Waste that is in need of urgent investment to make it safe.**
- 12) The considerable investment and financial stranglehold that the Nuclear Industry has on the communities of Copeland and Allerdale was also apparent during the consultation process and clearly had an impact on the final deliberations of the Copeland and Allerdale Councils and their positive votes to proceed to stage 4. This did not reflect the considerable public opposition to the deep storage of nuclear waste in areas identified as being geologically unsuitable.**
