

env/ ext/ 0775 – IED TNP Application: EPR/FP3031HJ

Dear David,

I am in the process of preparing an application to be part of the Transitional National Plan (TNP) in connection with the Industrial Emissions Directive (IED). The site is currently excluded from the definition of a combustion plant under the Large Combustion Plant Directive and is not part of the National Emissions Reduction Plan (NERP) and therefore was not invited to join the TNP directly by DEFRA via the letter dated 28th December 2011. The site has since received a copy of the letter and as such would like to be included within the draft UK TNP for emissions of nitrogen oxides. Due to the late receipt of the letter, it has not been possible for the site to collate all the information and the resultant calculations required, however this information will be available by 31st July 2012 at the latest.

In terms of measures foreseen, the site is in the process of evaluating options in order to ensure a timely compliance with the emission limit values that will apply from 30th June 2020.

Regarding the letter of 28th December 2011, pleased be advised that we wish to include our two LCP emission points in the UK's TNP for emissions of sulphur dioxide, nitrogen oxides and dust.

The EPR permit Number in question is EPR/FP3031HJ, Millennium Chemicals, CHP Plant, PO Box 26, Grimsby, DN41 8DP. This permit is currently held by PX Limited who are operating the installation on behalf of Millennium Inorganic Chemicals. The emission points are a 35m Main Stack from Heat Recovery Steam Generator No.1 (A2 Stack) and a 35m Main Stack from Heat Recovery Steam Generator No.2 (A4 Stack). Additionally there are two 19.5m by-pass stacks for each of the two gas turbines (Stack A1 and A3).

I understand that you require further information (para. 9 letter 28/12/11), however, as stated above I do not envisage that this can be completed until the end of July 2012.

Should you need any further clarification please contact me.

Regards

-
