4th June 2013

Sir,

My name is _____ I live in Widnes, Cheshire, and I would like to take part in the consultation. I am a member of _____ but I do not represent them in this consultation. My views are expressed as an individual, not any organisation.

1) I think the Government should take into consideration, placing its geological storage site near a nuclear power station.

New nuclear power stations will be built close to old nuclear power stations. Showing the locals are not against nuclear energy and its by-products.

2) Putting the geological storage site under the sea, could reduce people's fear of nuclear waste near them.

Building a tunnel from:-- Sellafield, or a coastal nuclear power station; several miles out to sea, would reduce the fear of nuclear waste.

3) The Government plans to place carbon dioxide from coal fired power stations, into old offshore oil wells. It could do the same with nuclear waste. The nuclear waste could be mixed with a cement slurry, and pumped into old oil or gas wells.

There are Gas rigs off the coast of Merseyside, belonging to British Gas, and Hamilton Brothers. These gas wells could be used to store nuclear waste, such as the 100,000 tons of depleted Uranium, near me. The gas would have been used up by the time new nuclear power station waste is ready to be pumped into them.

4) Burying the nuclear waste on an uninhabited island such as Rockall, 320Km from the Outer Hebrides, would remove the need to consult local people. I am assuming there are uninhabited islands around England.
