Subject: Short Consultation

You ask for comments on how to move forward to find a site for a GDF while keeping the voluntary principle. My views are:-

1. The initial approach was the wrong way round ie asking for volunteers and then looking at the geology. So using data already available eg Nirex, possible sites with potentially suitable geology should be identified and then volunteers sought.
2. The benefits to the local area should be spelt out at the time that communities are asked to volunteer.
3. However the most urgent physical problem is the waste at Sellafield. This should be made as safe as possible from the danger of terrorist attack. This is work that needs to be done in any case before it can be stored in a GDF and will provide local jobs.
