

## MANAGING RADIOACTIVE WASTE SAFELY

Dear Su / Madam,

I live in Cumbria and was very concerned how we as residents felt we were being run round to accept their waste with what seemed like little concern for long term environmental safety (radiological) & short/medium term environmental damage (SSSIs & other SSSI - Freshwater Pearl Mussel).

I believe what is needed now is a massive investment in a ground storage @ Sellafield, a thorough investigation nationally so only secure long term sites are identified. Once this is done, their voluntarism, concentrations can then be introduced into the process.

We have a responsibility for generations to come, not short term expediency!

Let's have good secure NOT politics. Use your position responsibly.
