Subject: no nuclear dump in Cumbria

31 Brigstocke rd
BS 2 8 UA

To whom it may concern

I OBJECT TO A REPOSITORY FOR NUCLEAR WASTE IN CUMBRIA.

You do not make clear that the Government plan is for the repository to take not only legacy waste but waste from new build.

The new reactors being proposed are going to use high burn up fuel which when spent is even more difficult to manage and shield including during transportation. The HLW/spent fuel situation is unworkable now with 'legacy' waste but with new build it will be much worse.

Cumbria is particularly unsuitable geologically....this has been assessed scientifically the "willingness" of a community is not based on scientific decision making. This is purely political maneuvering Future generations of that community will be INVOLUNTARY hosts to radioactive nuclear waste.

To bury and transport nuclear waste to Cumbria is not a solution it is simply not safe and it is not necessary.

There is serious scientific evidence coming to light that the nuclear industry is underestimating the serious and devastating repercussions of radiation on the health of the population

As far as I can see DECC and our government are too keen to please the industry at the expense of the health of our population and future generations. this is a gross infringement of our human rights not just for our generation but future generations
