**NEET Statistics - Quarterly Brief
November 2010**

Introduction

This note sets out the available statistics on young people Not in Education, Employment or Training (NEET) and young people Not in Education or Training (NET) from various sources.

The authoritative national estimates of NEET and NET rates are published annually in the Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England'. However, these data are only available annually, and cannot be disaggregated to sub-national levels.

We can use information from the Labour Force survey (LFS) and Client Caseload Information system (CCIS) maintained by the Connexions Service to monitor NEET at a more detailed level.

Analysis of the Labour Force Survey (LFS) allows in-year estimates to be made of NEET levels and trends as well as estimates of NEET levels for other age groups, including 16-24, 18-24 and 19-24. The LFS estimates cannot be directly compared with the headline SFR series, which is based on more detailed but less timely data.

Connexions Service administrative data (CCIS) allows measurement at local level and more detailed breakdowns of the NEET group to be made. However CCIS uses different definitions and relates only to those young people whose status is known to Connexions so is not directly comparable with LFS or SFR measures.

The data presented covers England and is based on academic age for the LFS and SFR data series and on actual age for the CCIS regional data series.

The 5 data series presented are:

- | | |
|--------------------------------|---------------------------------------|
| a. NEET SFR series | (latest data end 2009) |
| b. NEET quarterly LFS series | (latest data Quarter 3 2010) |
| c. CCIS data at regional level | (latest data Nov 09 – Jan 10 average) |
| d. NET SFR series | (latest data end 2009) |
| e. NET quarterly LFS series | (latest data Quarter 3 2010) |

Section 1- Trends. Focuses on the key trends in the NEET and NET data series for 16-18 year olds.

Section 2 - Segmentation. Splits down the 16-18 year olds NEET group into identifiable groups.

Section 3- Methodology and Notes. Explains the methodology used to derive the different series, and gives guidance on their usage.

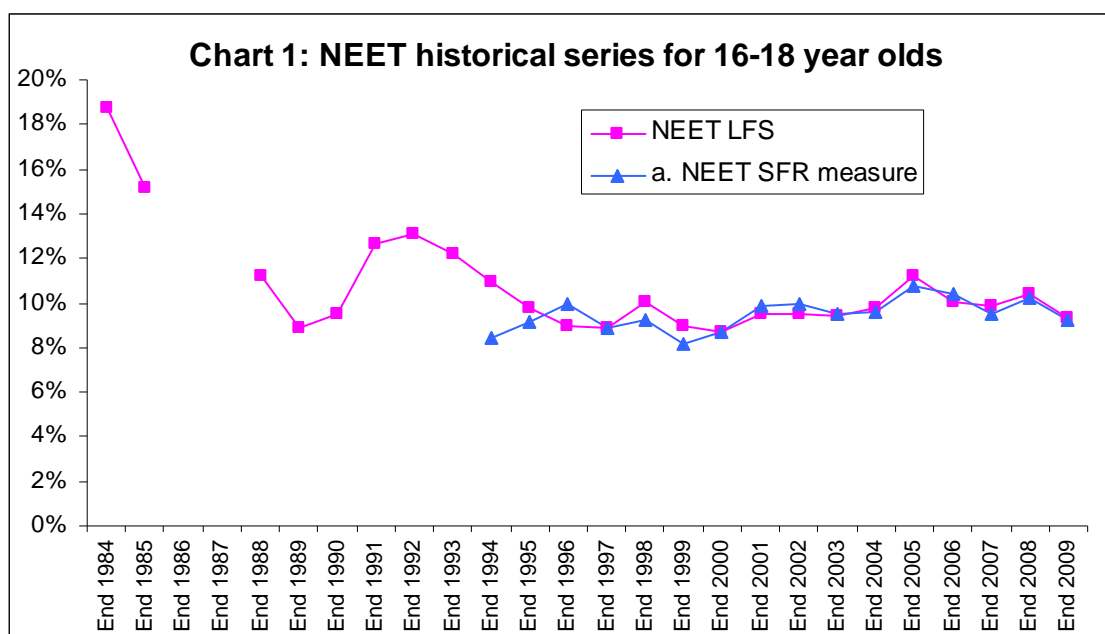

Section 4- Tables. Contains four tables showing numbers and percentages for the key data series on NET and NEET.

1. Trends

Historical Context

Understanding the historical trends in NEET rates is an important part of placing current performance in perspective. In order to do so, we have to use historical LFS data that is not directly comparable with any other series in this note, and so should be used as context only. Unfortunately, due to data issues, estimates for 1986 and 1987 are unavailable. The chart below also shows the NEET SFR measure for comparison.

NEET rates amongst 16-18 year olds were much higher than their current levels in the 1980s. The peak in 2005 was relatively high by the standards of the last 10 years, but the current level is not far off the long run average.

Source: Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England' and analysis of Labour Force Survey.

Note on LFS estimates: Annual data sets are used for 1984 to 1991.

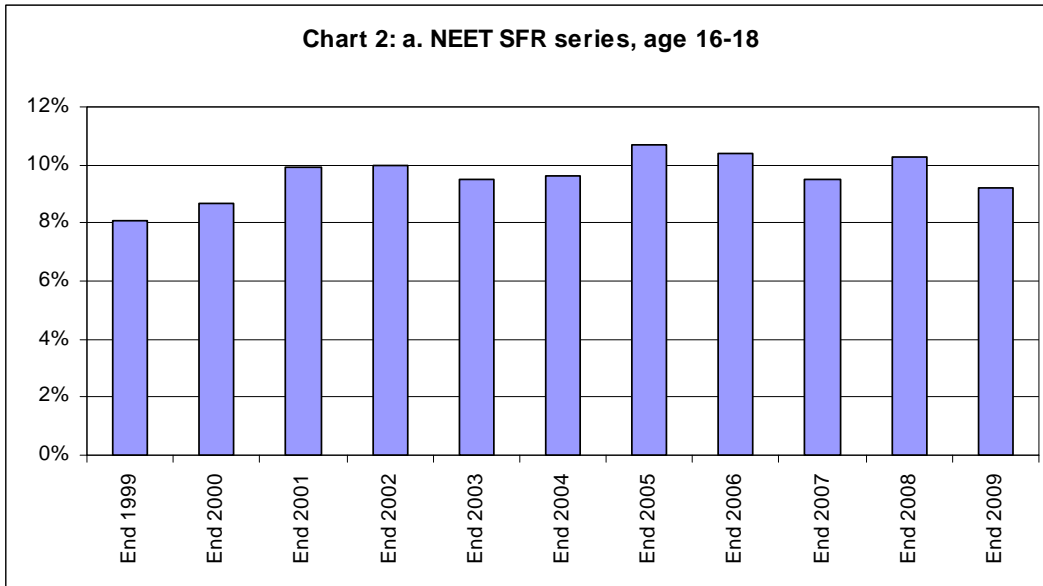

Quarter 4 data is used from 1992 onwards.

Between 1992 and 1994 the data does not exclude individuals answering yes to the qulnow variable, and between 1995 and 1999 individuals sampled in December were not asked the qulnow variable. This may mean that between 1992 and 1999 the proportion NEET is very slightly over-estimated.

a. NEET SFR series (last updated – June 2010)

The Department's Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England' is the primary source of national data on 16-18 year olds NEET.

Despite participation in education and training amongst 16-18 year olds rising consistently since 2003, causing the size of the NET group to fall, the proportion of the cohort who are NEET has remained broadly stable since 2003 (at around 10% ± 1%). This is because the increase in the proportion of 16-18 year olds in education and training (+ 7.4 percentage points since 2003) has been counter-balanced by a fall in the proportion of 16-18 year olds in employment (-15.7 percentage points since 2003). The overall effect is for the NEET rate to remain stable because around half of the drop in employment reflects a shift from young people being both in employment and education to being in education full-time.

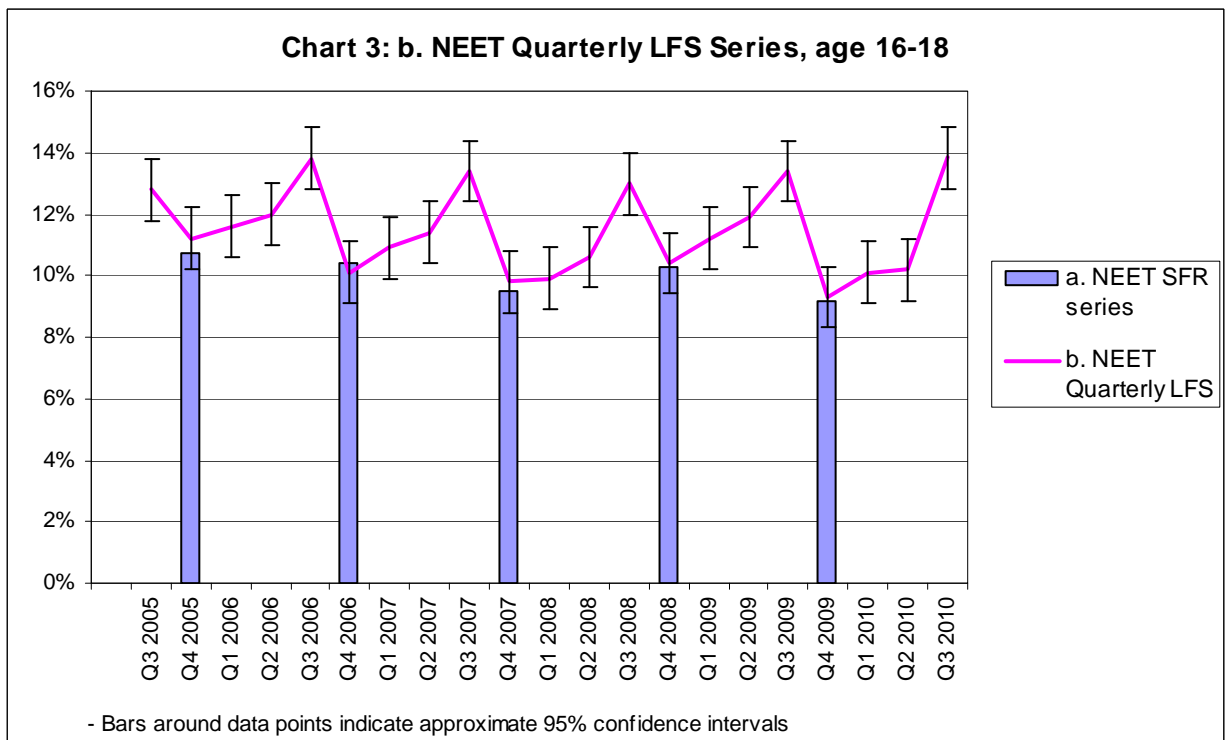

Source Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England'

b. NEET quarterly LFS series (last updated November 2010)

We can monitor trends in NEET rates between the publications of the SFR series using quarterly LFS data.

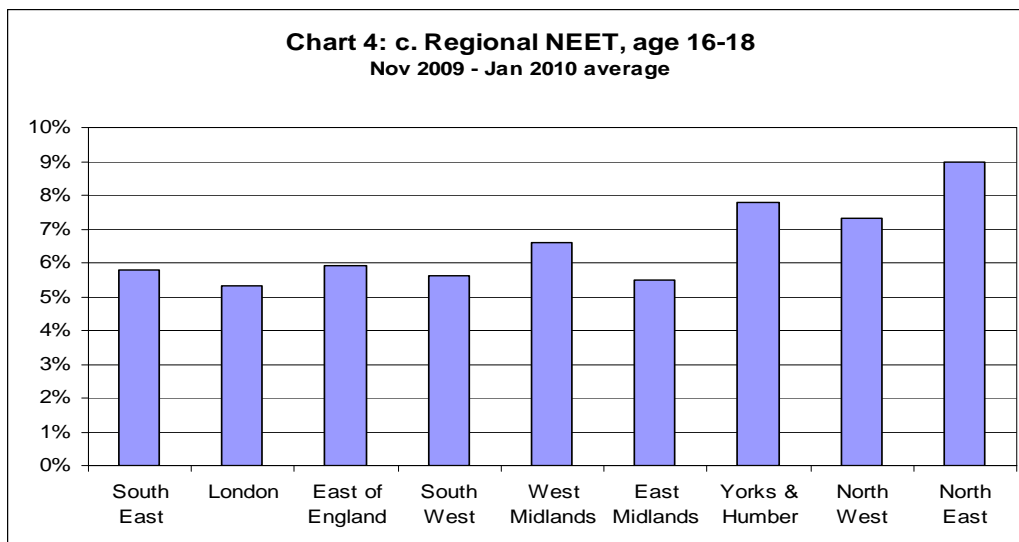

The trend data for 16-18 year olds shows seasonal patterns of lower rates in autumn (Quarter 4, October to December) followed by a gradual rise in spring and early summer (Quarters 1 & 2, January to June) with a peak in late summer (Quarter 3, July to September), reflecting the academic year. The latest data shows that the proportion of 16-18 year olds NEET has increased by 0.4 percentage points to 13.8% in the third quarter of 2010, compared to the third quarter of 2009.

Source: Quarterly Labour Force Survey

c. Regional NEET (last updated May 2010)

The regional picture on 16-18 NEET is taken from Connexions' Client Caseload Information System (CCIS), so is not directly comparable with other series presented here. Connexions data shows a lower percentage NEET than either the SFR or LFS, as there are a number of differences in the definitions used. For example, it is based on calendar age and young people taking a formal gap year or in custody are not counted as NEET in this regional data.

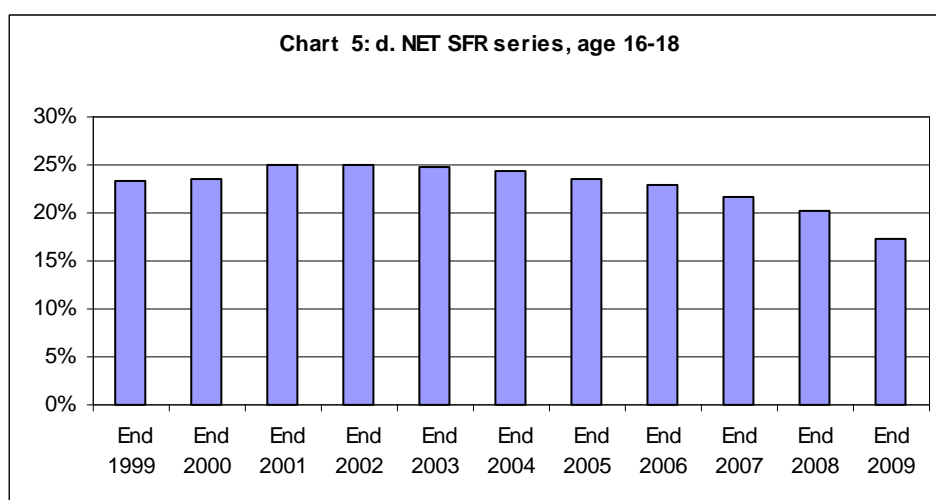

Source: CCIS data

Note: Connexions data are available at local authority level, and are published annually on the DfE website: [Link Here](#); regional NEET estimates for 16-24 year olds based on the LFS are now published as supplementary tables alongside this Quarterly Brief: [Link Here](#).

d. NET SFR series (last updated June 2010)

When looking at NEET data, it is also important to contextualise it with data on the proportion of young people Not in Education or Training (NET). This data is also taken from the Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England'.

Source: Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England'

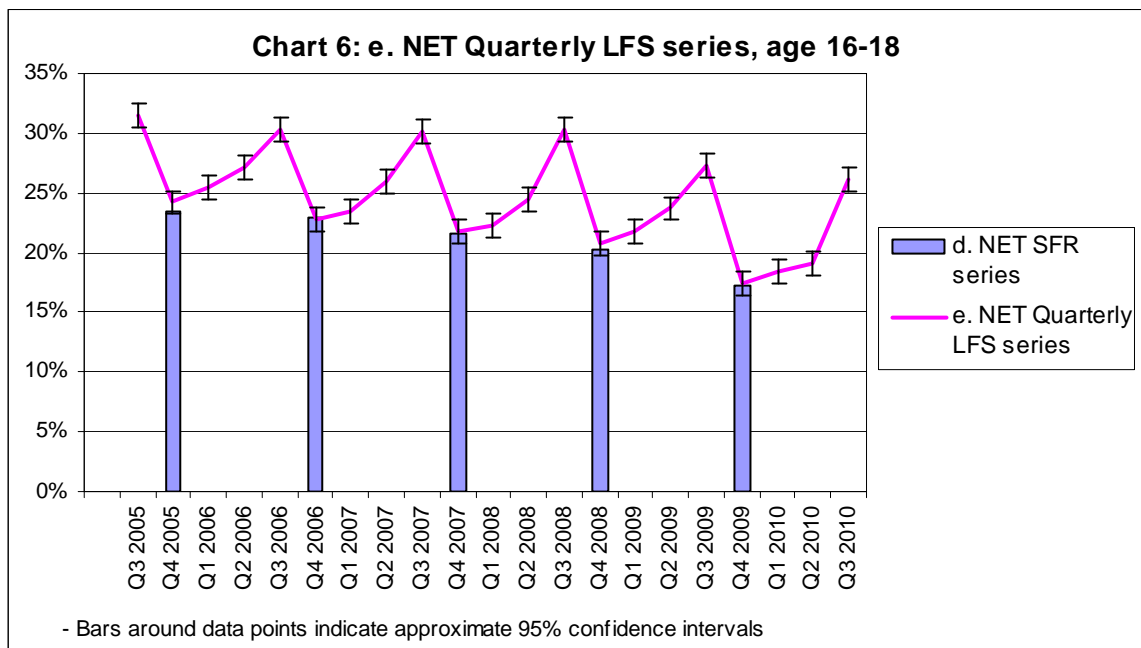

The latest data shows the largest fall in the 16-18 year old NET rate since 1987, and the seventh successive annual fall since 2002. Despite the increased participation in education and training, the

NEET rate has remained broadly stable at 10% ±1. This is due to reduced employment amongst the NET group, down from 61.6% at end 2003 to 46.7% at end 2009.

e. NET quarterly LFS series (last updated November 2010)

As with the NEET data, we can look at the in-year NET trend data using the quarterly LFS.

The same seasonal pattern to the NET figures exists as in the NEET series. The latest LFS NET rate for 16 to 18 year olds, Quarter 3 2010, is 26.1%. The Quarter 3 NET rate for 16-18 year has fallen for the third successive year, and in the latest quarter (Q3 2010) the rate was 1.3 percentage points lower than the same quarter last year.

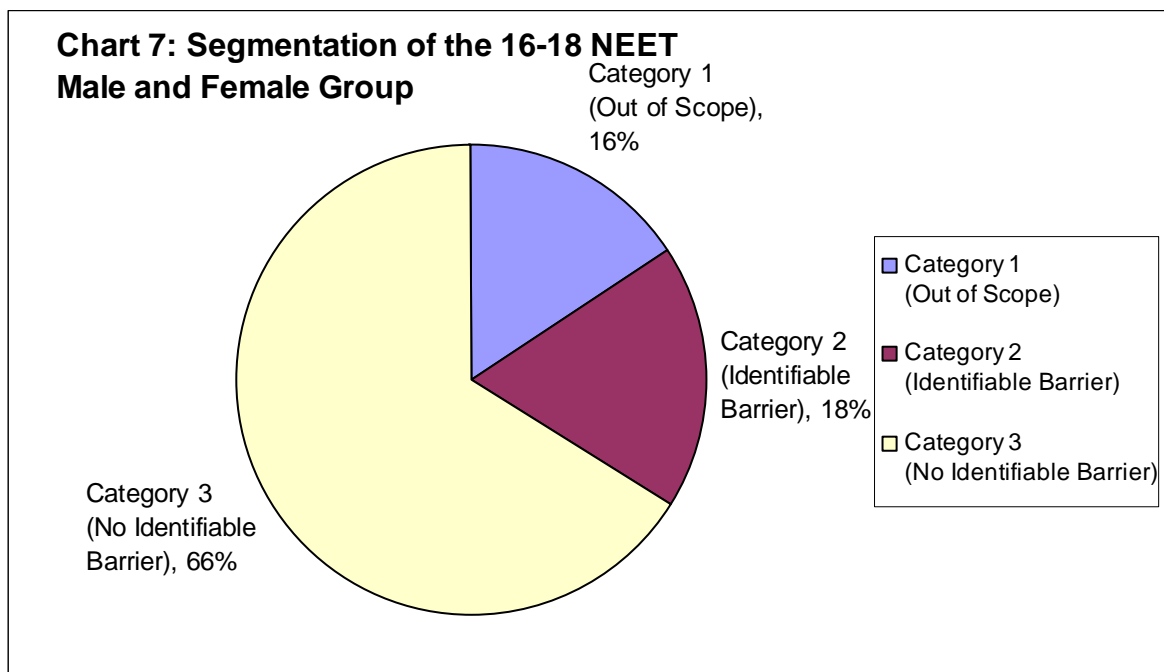

Source: Quarterly Labour Force Survey

2. Segmentation (last updated August 2010)

Using the Connexions' Client Caseload Information System (CCIS) data, we can classify the NEET group into one of 3 categories.

- Category 1 (Out of Scope): Young people who are doing some activity which is not formally counted as education, employment or training. This will include gap year students and those undertaking voluntary work. It will also include those in custody.
- Category 2 (Identifiable Barrier): Young people who have an identifiable barrier to participation, as they have a child or are experiencing serious illness or disability. Some of these individuals may be perfectly able to participate now, but others may require specific help to do so.
- Category 3 (No Identifiable Barrier): Young people who are NEET but are not in either of the specific categories outlined above.

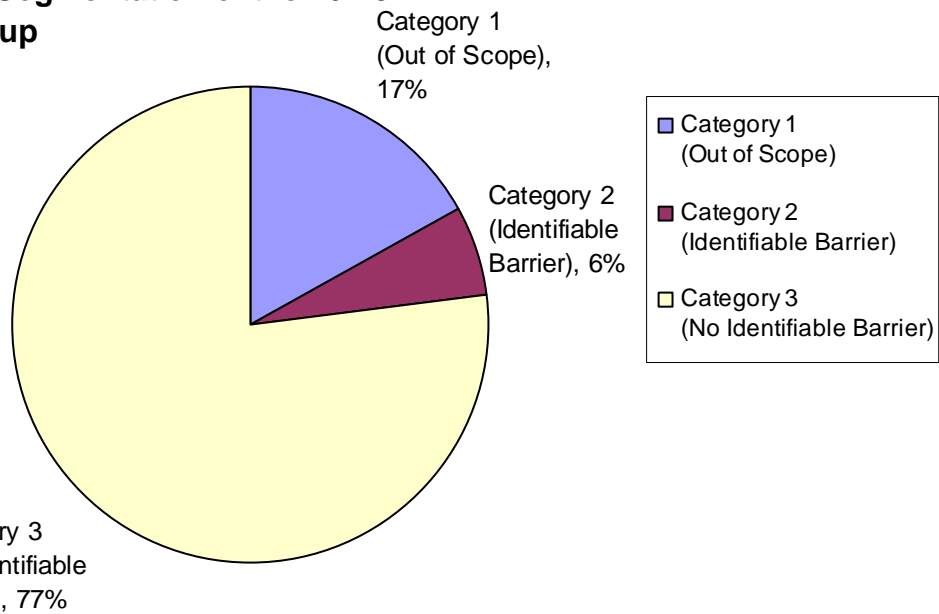

By segmenting the NEET group into these categories using the rich CCIS data¹ we can build up a picture of what the NEET group looks like. The proportions are shown in Charts 7 to 9. The proportions vary widely depending on gender. Chart 7 shows that overall, 66% of the 16-18 NEET group are in the No Identifiable Barrier category. However, 77% of 16-18 year old males NEET have no identified barrier to participation (Chart 8), while only 51% of females NEET fall in this category (Chart 9). Young men who are NEET are much less likely to have an identified barrier to participation (6%) than young women (35%).

Source: Internal analysis based on CCIS, UCAS data and SFR18/2010 Participation in Education, Training and Employment by 16-18 Year Olds in England.

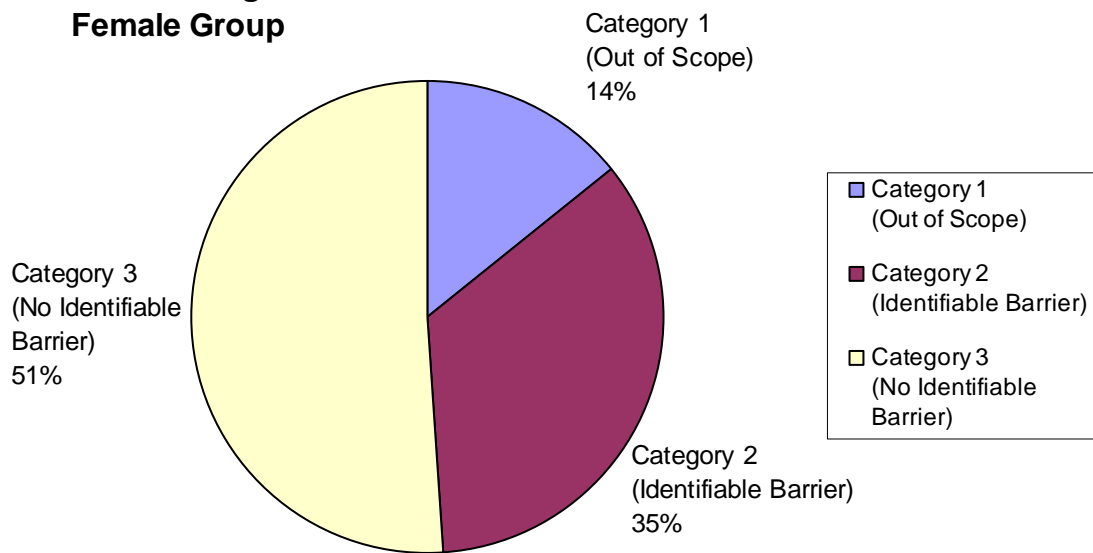

¹ CCIS data was used to proportionally split each age group/gender into the three segmentation categories. These proportions were then applied to the SFR NEET figures, which were then totalled to make the 16-18 group. This ensured under-reporting of certain groups in CCIS would not affect the totals.

Chart 8: Segmentation of the 16-18 NEET Male Group

Source: Internal analysis based on CCIS, UCAS data and SFR18/2010 Participation in Education, Training and Employment by 16-18 Year Olds in England.

Chart 9: Segmentation of the 16-18 NEET Female Group

Source: Internal analysis based on CCIS, UCAS data and SFR18/2010 Participation in Education, Training and Employment by 16-18 Year Olds in England.

If these percentages were applied to the total number of 16-18 year olds NEET from the SFR data, the following table would result.

Estimated number of people in each category of NEET

16-18	Female	Male	Total
Category 1 (Out of Scope)	11,000	18,000	29,000
Category 2 (Identifiable Barrier)	27,000	7,000	33,000
Category 3 (No Identifiable Barrier)	40,000	81,000	121,000
Total	78,000	106,000	183,000

Source: Internal analysis based on CCIS, UCAS data and SFR18/2010 Participation in Education, Training and Employment by 16-18 Year Olds in England

Categories may not sum to the total due to independent rounding

3. Methodology and notes

a. NEET SFR series

Description	This data is the definitive measure for 16-18 NEET rates in England.
Uses	This series should be used as the national time series for 16-18 year olds NEET in England.
Geographical Coverage	England
Age coverage	Academic age 16 to 18
Published source	Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England'
Primary sources	The Schools' Census Pupil Level Annual Schools' Census The Individualised Learner Record (ILR) Higher Education Statistics Agency (HESA). Higher Education Students Early Statistics (HESES) Labour Force Survey Mid-year estimates and projections of population from the Office for National Statistics (ONS) and the Government Actuary's Department (GAD).
Last period covered	End 2009
Last published	June 2010
Next published	June 2011

b. NEET quarterly LFS series

Description	This series is a quarterly estimate of NEET amongst young people from the LFS. It is not directly comparable with the SFR measure.
Uses	This series provides more timely data on the recent trends in NEET since the last SFR. Trends should be assessed by comparing the current quarter with the same quarter in the previous year to account for seasonal effects. Quarter on quarter changes should not be quoted.
Geographical coverage	England
Age coverage	Academic age 16 to 24
Published source	Quarterly Labour Force Survey
Primary sources	Quarterly Labour Force Survey
Last Period Covered	Q3 2010
Last published	November 2010
Next published	February 2011

c. Regional NEET

Description	This series is a 3 month average snapshot estimate of the regional NEET rate taken from the CCIS connexions management information system. It is not directly comparable with the LFS or SFR series. Because of the discrepancy in numbers between this and other measures, only percentages are reported. Unlike in the other series, young people taking a formal gap year or in custody are not counted as NEET.
Uses	This series allow us to look at the regional data used by connexions partnerships to set local activity and targets on NEET. It helps us understand the data that local connexions partnerships base their decisions on.
Geographical Coverage	England
Age coverage	Calendar age 16 to 18
Published source	Unpublished CCIS data
Primary sources	CCIS
Last Period Covered	November 2009 – January 2010 average.
Last published	N/A
Next published	N/A

d. NET SFR series

Description	This data is the definitive measure for NET rates in England.
Uses	This series should be used as a national time series for 16-18 year olds NET in England. It should also be used as context for any NEET data.
Geographical Coverage	England
Age coverage	Academic age 16 to 18
Published source	Statistical First Release (SFR) 'Participation in Education, Training and Employment by 16-18 Year Olds in England'
Primary sources	The Schools' Census Pupil Level Annual Schools' Census The Individualised Learner Record (ILR) HE Higher Education Statistics Agency (HESA). Higher Education Students Early Statistics (HESES) Labour Force Survey Mid-year estimates and projections of population from the Office for National Statistics (ONS) and the Government Actuary's Department (GAD).
Last Period Covered	End 2009
Last published	June 2010
Next published	June 2011

e. NET quarterly LFS series

Description	This series is a quarterly estimate of NET amongst young people from the LFS.
Uses	This series provides more timely data on the recent trends in NET since the last SFR. It should also be used as context for any NEET data. Trends should be assessed by comparing the current quarter with the same quarter in the previous year to account for seasonal effects. Quarter on quarter changes should not be quoted.
Geographical Coverage	England
Age coverage	Academic age 16 to 24
Published source	Quarterly Labour Force Survey
Primary sources	Quarterly Labour Force Survey
Last Period Covered	Q3 2010
Last published	November 2010
Next published	February 2010
