

Highways Agency Specification 2013-14 – Scoping Document

Field	Notes
Short Title	Impact of Investment on the 'On Time' Reliability Measure.
Performance Specification Reference	Output 5 – PS 4.7a
Requirement / Output Details	<p>The network operator should complete a piece of work by the end of March 2015 which:</p> <ul style="list-style-type: none"> Builds understanding of how the investment, and therefore activities, it undertakes affect the on time reliability performance of the network.
Scope	<p>We will identify locations where major schemes have been constructed and examine the 'on time' data to see if the impact of the investment can be identified.</p> <p>We are focussing on major schemes in the first instance as these represent the majority of our investment and the most likely to have an impact. Once the outcome of this work is known, we will review the merit in extending the work to other investment streams.</p>
Rationale	Output 5 highlights that journey times on the SRN should be reliable. Many of our major schemes claim that they will improve reliability.
Proposed Deliverables (with Associated Completion Dates)	<ol style="list-style-type: none"> 1) A list of major schemes constructed, including whether or not an improvement in reliability was anticipated. (completed) 2) Investigate methodologies for how to interrogate the impact of these schemes on the 'on time' measure. (August 2014) 3) A report setting out the results of applying the methodology. (timescale to be agreed when scoping methodology)
