Executive summary

This report presents statistics on abortions carried out in England and Wales in 2013.

For women resident in England and Wales, 2013:

Total number

- The total number of abortions was 185,331. This was 0.1% more than in 2012 (185,122) and 2.1% more than in 2003 (181,582).

Abortion rates

- The age-standardised abortion rate was 15.9 per 1,000 resident women aged 15-44. This was 0.8% lower than in 2012, and 4.7% lower than in 2003 (16.7); the lowest rate for 16 years.
- The abortion rate was highest for women aged 22 (at 30 per 1,000). The highest rate in 2012 was for women aged 21 (at 31 per 1,000).
- The under-16 abortion rate was 2.6 per 1,000 women and the under-18 rate was 11.7 per 1,000 women. Both lower than in 2012 (3.0 and 12.8 per 1,000 women respectively) and in the year 2003 (3.9 and 18.2 per 1,000 women respectively).

Location and funding of abortions

- 98% of abortions were funded by the NHS. Of them, over half (64%) took place in the independent sector under NHS contract, up from 62% in 2012

Gestation

- 91% of abortions were carried out at under 13 weeks gestation, 79% were at under 10 weeks compared to 77% in 2012 and 58% in 2003.

Method of abortion

- Medical abortions accounted for 49% of the total. This was slightly higher than in 2012 (48%), and 17% in 2003.

Ground E abortions

- 2,732 abortions (1%) were carried out under ground E (risk that the child would be born handicapped).

Non-residents:

- In 2013, there were 5,469 abortions for non-residents carried out in hospitals and clinics in England and Wales (5,850 in 2012). The 2013 total is the lowest in any year since 1969.

1. Introduction

- 1.1 This report presents statistics on abortions carried out in England and Wales in 2013. It is the twelfth in an annual series published by the Department of Health (DH), the first of which was for abortions in 2002. These are available on the GOV.UK website¹. Statistics for years from 1974 to 2001 were published by the Office for National Statistics (ONS) in their Abortion Statistics Series AB, Nos 1 to 28. The reports for 1991 to 2001 are available electronically on request to abortion.statistics@dh.gsi.gov.uk. Statistics for years from 1968 to 1973 were published in the Registrar General's Statistical Review of England and Wales, Supplement on Abortion.

The legislative context

- 1.2 The Abortion Act 1967, as amended by the Human Fertilisation and Embryology Act 1990, permits termination of a pregnancy by a registered medical practitioner subject to certain conditions. Legal requirements apply to the certification and notification of abortion procedures. Within the terms of the Abortion Act, only a registered practitioner can terminate a pregnancy. The doctor taking responsibility for the procedure is legally required to notify the Chief Medical Officer (CMO) of the abortion within 14 days of the termination, whether carried out in the NHS or an approved independent sector place and whether or not the woman is a UK resident. The Department of Health provides form HSA4 for this purpose. Further details are available on the GOV.UK website:

<https://www.gov.uk/government/organisations/department-of-health/series/abortion-statistics-for-england-and-wales#statistical-data-sets>

- 1.3 Except in an emergency, any treatment for the termination of pregnancy can only be carried out in an NHS hospital or in a place approved for the purpose by the Secretary of State. After 24 weeks gestation, the abortion can only be carried out in an NHS hospital. Through contractual arrangements with Clinical Commissioning Groups (CCGs), some approved independent sector places perform NHS-funded abortions.
- 1.4 A legally induced abortion must be certified by two registered medical practitioners as justified under one or more of the following grounds:

A the continuance of the pregnancy would involve risk to the life of the pregnant woman greater than if the pregnancy were terminated (Abortion Act, 1967 as amended, section 1(1)(c))

¹ <http://transparency.dh.gov.uk/category/statistics/abortion>

- B the termination is necessary to prevent grave permanent injury to the physical or mental health of the pregnant woman (section 1(1)(b))
- C the pregnancy has not exceeded its twenty-fourth week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of the pregnant woman (section 1(1)(a))
- D the pregnancy has not exceeded its twenty-fourth week and that the continuance of the pregnancy would involve risk, greater than if the pregnancy were terminated, of injury to the physical or mental health of any existing children of the family of the pregnant woman (section 1(1)(a))
- E there is a substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped (section 1(1)(d))

or, in an emergency, certified by the operating practitioner as immediately necessary:

- F to save the life of the pregnant woman (section 1(4))
- G to prevent grave permanent injury to the physical or mental health of the pregnant woman (section 1(4))

How the statistics are produced

- 1.5 The doctor taking responsibility for an abortion is legally required to notify the Chief Medical Officer (CMO) within 14 days of the termination. Abortion notification forms (HSA4s) can be submitted online or on paper.
- 1.6 The Department of Health use a thorough process for inspecting and recording the information received on the forms in order to monitor compliance with the legislation and the extent to which best practice guidance from the Department of Health is followed. The methods used ensure that good quality accurate statistics can be derived from the data. Annex A contains further information about data quality.
- 1.7 The format of the tables have been revised in the light of the judgment handed down by the High Court in the case relating to the release of information on principal medical condition for abortions performed under ground E. A more limited degree of suppression has been applied, where necessary, to avoid the disclosure of personal data.

- 1.8 This publication is a National Statistic. It is a statutory requirement that National Statistics should be produced in accordance with the standards set out in the Code of Practice for Official Statistics. The UK Statistics Authority assesses all National Statistics for compliance with the Code of Practice. The results of the assessment of abortion statistics were published in February 2012 and are available at <http://www.statisticsauthority.gov.uk/assessment/assessment/assessment-reports/index.html>. The Statistics Authority confirmed that the statistics could continue to be designated as National Statistics.

Implementation of the 2013 European Standard Population (ESP)

- 1.9 The European Standard Population (ESP) is an artificial population structure which is used in the weighting of mortality or incidence data to produce age standardised rates (ASRs). Eurostat, the statistical institute of the European Union, decided to update the population structure to be more representative of the current population of Europe.
- 1.10 The 2013 ESP replaces the 1976 ESP used in calculating age standardised rates. Further information about the ESP and the effect on UK age standardised rates is available at <http://www.ons.gov.uk/ons/guide-method/user-guidance/health-and-life-events/revised-european-standard-population-2013--2013-esp-/index.html>. Annex A gives detail of the effect on abortion age standardised rates from the implementation of the 2013 ESP.
- 1.11 All age standardised rates presented in this publication are based on the 2013 ESP. The time series for age standardised rates using the 2013 ESP back to 1968 is presented in table 1. To see rates using the 1976 ESP users should refer to earlier publications.

Ground E notifications

- 1.12 During 2013, it was brought to the Department of Health's attention that the number of Ground E HSA4 notifications was lower than the number reported to the congenital anomaly registries. As there is currently no national register, the Department of Health has worked closely with the National Down's Syndrome Cytogenetic Register (NDSCR) to explore this discrepancy.
- 1.13 A matching exercise was carried out between the NDSCR data and Department of Health notifications for 2011 and 2012 data. Results from the matching suggest that a Department of Health notification was made for about 50% of NDSCR records. Hence there is potentially an undercount presented in the ground E notification tables in this publication.
- 1.14 In response, the Department of Health asked the Royal College of Obstetricians and Gynaecologists (RCOG) to consider the possible reasons for under-reporting of abortions on the grounds of fetal abnormality and make recommendations for improvement. Results from the matching exercise and RCOG recommendations are published at <https://www.gov.uk/government/publications/under-reporting-of-abortions-for-fetal-abnormalities>. The Department of Health will work closely with RCOG and other organisations in implementing the recommendations where possible.

2. Commentary

Unless specified, the following commentary, charts and tables relate to abortions carried out in England and Wales for residents of England and Wales only, rather than all abortions carried out in England and Wales. Figures in all but Table 13 exclude abortions for residents of England and Wales that are carried out in other parts of the United Kingdom or outside the UK.

Overall number and rate of abortions

2.1 In total, there were 190,800 abortions notified as taking place in England and Wales in 2013. There were 185,331 abortions to residents of England and Wales in 2013. This represents an age-standardised abortion rate of 15.9 per 1,000 resident women aged 15-44². This is the lowest rate since 1997: 0.8% lower than in 2012, 4.7% lower than in 2003 but double the rate of 7.8 per 1000 resident women aged 15-44 recorded in 1970 (Table 1 and Figure 1).

Figure 1: Age-standardised abortion rate per 1,000 women aged 15-44 (2013 ESP), England and Wales, 1969 to 2013

Age

2.2 The crude abortion rate in 2013 was highest for women aged 22 (at 30 per 1,000). There were 773 abortions to women aged under 15 (less than one per cent of the total) and 686 to women aged 45 or over (less than a half of one per cent) (Table 4a and Figure 2).

² See Annex A for the 2013 ESP and how the rate is derived.

Figure 2: Abortion rate per 1,000 population by single year of age, England and Wales, 2003, 2012 and 2013

2.3 The under-16 abortion rate was 2.6 per 1,000 population in 2013 compared with 3.0 in 2012 and 3.9 in 2003 and the under-18 rate was 11.7 in 2013, compared with 12.8 in 2012 and 18.2 in 2003. Rates for women up to age 22 were all lower than in 2012, and rates for women over age 22 were similar to the 2012 rate. (Table 3b).

Marital status

2.4 About four-fifths (81%) of abortions in 2013 were carried out for single women, a proportion that has risen slowly from 76% since 2003 (See Table 3a.v).

Ethnicity

2.5 The revised HSA4 forms introduced in 2002 allowed for the recording of ethnicity, as self-reported by the women involved. This information was not previously recorded. Ethnicity was recorded on 96% of the forms received for 2013 compared with 80% in 2003, the first full year of collection. Of women whose ethnicity was recorded in 2013, 76% were reported as White, 9% as Asian or Asian British and 9% as Black or Black British (See Table 3a.vi). This differs from the ethnicity population estimates based on the 2011 census³ where 86% are reported as White, 7.5% as Asian or Asian British and 3.3% as Black or Black British.

2.6 The percentage of women having an abortion in 2013 who had one or more previous abortions varies by ethnic group. 33% of Asian women having abortions in 2013 had previously had an abortion, compared with 49% of Black women (See Table A below). 36% of White women had previously had an abortion.

³ http://www.ons.gov.uk/ons/dcp171776_290558.pdf

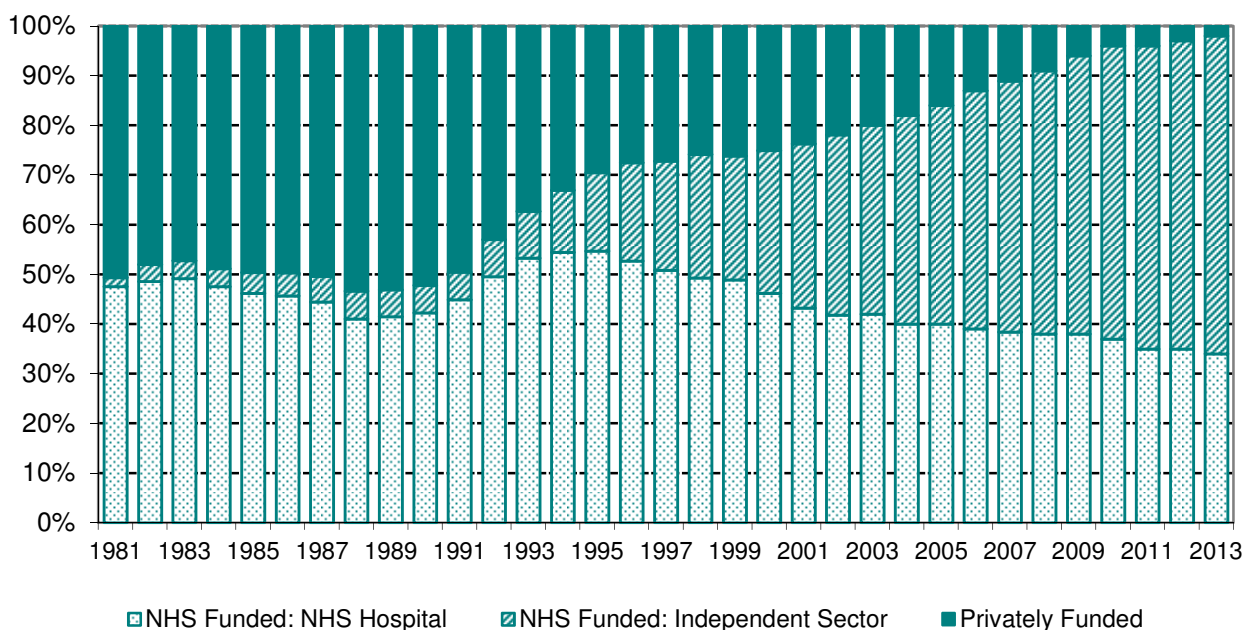

Table A: Percentage of women who had one or more previous abortions, by ethnicity, England and Wales, 2013

| Ethnicity | % of women who had one or more previous abortions |
|-------------------------------|---|
| Asian or Asian British | 33% |
| Black or Black British | 49% |
| Chinese or other ethnic group | 31% |
| Mixed | 45% |
| White | 36% |
| All women | 37% |

Location and funding of abortions

2.7 Table 3a.i and Figure 3 show that in 2013, 34% of abortions were performed in NHS hospitals and 64% in approved independent sector places under NHS contract (previously named NHS Agency), making a total of 98% of abortions funded by the NHS. The remaining 2% were privately funded. The proportion performed under NHS contract has been rising steadily since this information was collected in 1981, while the proportions of NHS hospital and private abortions have been falling since 1995 and 1988 respectively.

Figure 3: Abortions by purchaser / provider, England and Wales, 1981 to 2013

Statutory grounds for abortion

- 2.8 In 2013, the vast majority (97%; 180,680) of abortions were undertaken under ground C. A further 1% (1,726) under ground D, a similar proportion was carried out under ground E (1%; 2,732). Grounds A and B together accounted for about a tenth of one per cent of abortions (192). The proportion of ground C abortions has risen steadily with a corresponding reduction in ground D cases (See Table 3a.ii).
- 2.9 The vast majority (99.84%) of ground C only terminations were reported as being performed because of a risk to the woman's mental health. No further breakdown for F99 (mental disorder, not otherwise specified) is included in the International Classification of Diseases and therefore no further breakdown is possible within the report.
- 2.10 Main medical diagnoses for abortions performed under ground C alone which were not due to mental health (73 cases) were those performed because of; complications of pregnancy (40 cases) including hypertension, excessive vomiting, diabetes, amniotic fluid disorders and premature rupture of membranes; diseases of the circulatory system (8 cases); diseases of the nervous system (4 cases); diseases of the genitourinary or musculoskeletal system (3 cases), and other maternal conditions unrelated to pregnancy such as cancer and epilepsy (18 cases).
- 2.11 At the time of publication, 215 cases performed under ground C did not have enough information to allocate a diagnosis code and are being followed up.
- 2.12 The methods used for abortions performed under ground E are of interest to those working in fetal anomaly screening and medicine. In 2013, 73% of ground E abortions were performed medically compared to 49% of all abortions (Tables 9c and 7a).
- 2.13 Abortions are rarely performed under grounds F or G. In the past 10 years, 4 such abortions have been performed, 1 in each of years 2006, 2011, 2012 and 2013.
- 2.14 Congenital malformations were reported as the principal medical condition in nearly half (48%; 1,301) of the 2,732 cases undertaken under ground E. The most commonly reported malformations were of the nervous system (24% of all ground E cases; 663) and the musculoskeletal system (8%; 216). Chromosomal abnormalities were reported as the principal medical condition for just over a third (37%; 1003) of ground E cases. Down's syndrome was the most commonly reported chromosomal abnormality (22%; 590) (See Table 9a).
- 2.15 The Abortion Notification form HSA4 allows the recording of all medical conditions and other details associated with the ground. Table 9a shows totals for all mentions of any medical condition recorded. For example, there were 1,835 mentions of a congenital malformation within the 2,732 Ground E cases.
- 2.16 No abortions in 2013 were associated with rubella under ground E. In the past 10 years, there have been 7 abortions associated with rubella: 2 in 2003, 3 in 2005, 1 in 2006 and 1 in 2007.

Gestation period

2.17 The vast majority of abortions are performed at under 13 weeks (92% in 2013). There has been a continuing increase in the proportion of abortions that are performed under 10 weeks since 2003. In 2013, 79% of abortions were performed at under 10 weeks, compared to 58% in 2003. In 2013 and 2012, there were similarities in the proportion performed later: in 2013, 12% were performed at 10-12 weeks (compared to 14% in 2012 and 29% in 2003) and 8% at 13 weeks or more (compared to 9% in 2012 and 13% in 2003) (See Table 3a.iii and Figure 4). Department of Health policy is that women who are legally entitled to an abortion should have access to the procedure as soon as possible. Evidence shows that the risk of complications increases the later the gestation.

Figure 4: Abortions by gestation, England and Wales, 2003 to 2013

2.18 Over three quarters (79%) of NHS funded abortions took place at under 10 weeks, ranging from 56% in NHS South West Lincolnshire to 88% in NHS Central London (Westminster) (See Table 11a).

2.19 Abortions where gestation has exceeded its twenty-fourth week account for less than 0.1% of the total. There were 190 such abortions in 2013 (See Table 5 and Table 9a).

Previous abortions

2.20 In 2013, 37% of women undergoing abortions had one or more previous abortions. The proportion has risen from 32% in 2003 (See Table 3a.ix and Table 4b). 27% of abortions to women aged under 25 were to women who had one or more abortions (See Table 11b). Repeat unintended pregnancy and subsequent abortion is a complex issue associated with increased age as it allows longer for exposure to pregnancy risks (See Table B).

Table B: Percentage of women who had one or more previous abortions, by age, England and Wales, 2013

| Age | % of women who had one or more previous abortions |
|------------------|---|
| Under 18 | 7% |
| 18-19 | 18% |
| 20-24 | 34% |
| 25-29 | 44% |
| 30-34 | 47% |
| 35 or over | 45% |
| All women | 37% |

Previous obstetric history

2.21 In 2013, 53% of women undergoing abortions had one or more previous pregnancies that resulted in a live or stillbirth, up from 47% in 2003 (See Table 3a.vii). 18% of women had a previous pregnancy resulting in a miscarriage or ectopic pregnancy, up from 13% in 2003, when the information was first collected (See Table 3a.viii).

Method of abortion

2.22 Different methods may be used to terminate a pregnancy, depending on the duration of gestation, and other circumstances relating to the individual woman. There is one principal medical method, involving the use of the abortifacient drug Mifegyne (mifepristone, also known as RU486). The main surgical methods are vacuum aspiration, recommended at up to 15 weeks gestation, and dilatation and evacuation (D&E) recommended where gestation is greater than 15 weeks. D&E may be used in combination with vacuum aspiration; such cases are recorded in the statistics as D&E.

2.23 Medical abortions accounted for 49% of the total in 2013. The proportion of medical abortions has more than trebled in the last ten years, from 17% in 2003. There has been a continuing upward trend in medical abortions since 1991 when Mifegyne was licensed for use in the UK, when only 4% of abortions were undertaken using a medical procedure (See Table 3a.iv and Table 5). In 2013, 61% of abortions under nine weeks were medical abortions compared with 21% in 2003. The choice of early medical abortion as a method of abortion is likely to have contributed to the increase in the overall percentage of abortions performed at under ten weeks gestation (58% in 2003 compared with 79% in

2013). Early medical abortion is less invasive than a surgical procedure and does not involve use of anaesthetics.

2.24 The surgical procedure vacuum aspiration was used for 46% of all abortions in 2013; and Dilatation and Evacuation (D&E) alone in about 5% (See Table 3a.iv).

2.25 For abortions at 22 weeks or beyond, feticide is recommended by the Royal College of Obstetricians and Gynaecologists prior to the evacuation of the uterus to stop the fetal heart. In 2013, of the 1,201 abortions performed at 22 weeks and over, 68% were reported as preceded by a feticide and a further 26% were performed by a method whereby the fetal heart is stopped as part of the procedure. 4% of abortions at 22 weeks or beyond were confirmed as having no feticide. For the remaining 11 cases, at the time of publication, we had not been able to confirm whether feticide had been performed.

Length of stay in hospital/clinic

2.26 In 2013, 439 women (0.2%) were reported as having duration of stay of one or more nights. More than half of these stays were for abortions performed at later gestations of 20 weeks and over (See Table C).

Table C: Abortions requiring a length of stay of one or more nights, percentage breakdown by gestation, England and Wales, 2013

| Gestation (weeks) | % of those requiring a length of stay of one or more nights (Total 100%) | % of all abortions (Total 100%) |
|-------------------|---|------------------------------------|
| Under 10 | 11% | 79% |
| 10-12 | 7% | 12% |
| 13-19 | 25% | 7% |
| 20 or over | 57% | 1% |

Complications

2.27 Complications were reported in 235 cases in 2013, a rate of about one in every 800 abortions, slightly lower than the rate in 2012 (about one in 700) and 53 per cent lower than in 2003 (See Table 8).

2.28 There were no deaths following abortion reported on form HSA4 in 2013. Deaths related to pregnancy and abortion are published in the 'Confidential Enquiry into Maternal Deaths in the UK' published by The Centre for Maternal and Child Enquiries (CMACE).

Selective terminations

2.29 In 2013, there were 125 abortions which involved selective terminations. In 74 cases, two fetuses were reduced to one fetus. In 28 cases, three fetuses were reduced to two fetuses and in 10 cases three fetuses were reduced to one fetus. Over three quarters (76%) of the selective terminations were performed under ground E.

Chlamydia screening

2.30 The revised HSA4 forms introduced in 2002 allowed for the recording of whether chlamydia screening was offered. The Royal College of Obstetricians and Gynaecologists recommend that all women undergoing an abortion should be screened for *C. trachomatis* and undergo a risk assessment for other STIs. Chlamydia is the most commonly diagnosed STI in England. Infection of varying degrees of severity may occur after medical or surgical abortion and is usually caused by pre-existing infection. Prophylactic antibiotic use and bacterial screening for lower genital tract infection reduces this risk. Analysis of returned data for 2013 shows that 87% of women having abortions in 2013 were offered chlamydia screening, up from 65% in 2003. The figure for women aged under 25 is slightly higher (91%) (See Table 3a.x).

Place of residence within England and Wales

2.31 The place of residence details provided on the HSA4 form, are used to allocate each record to a Clinical Commissioning Group (CCG) for analysis. For Wales, records are allocated to their equivalents, Local Health Boards. Tables 10a, 10b, 11a and 11b show information for these areas.

2.32 Similarly the place of residence details are used to allocate each record to a Local Authority (LA) and tables 10c, 10d, 11c and 11d show information by LA.

Women resident outside England and Wales

2.33 In 2013, there were 5,469 abortions to women resident outside England and Wales, compared with 5,850 in 2012. Principally, these non-residents were from the Irish Republic (67%) and Northern Ireland (15%). See Tables 12a, c, and d. The number of abortions to non-residents has fallen each year since 2003, when the figure was 9,078. The 2013 total is the lowest in any year since 1969 (See Table 1 and Table 12a).

Abortions carried out in Great Britain

2.34 There were 202,577 abortions carried out in Great Britain in 2013, of which 94% took place in England and Wales and 6% took place in Scotland (See Table 13). Scotland perform the majority of abortions medically 79% compared to those performed in England and Wales where the proportions were surgical 52% and medical 48%. The proportion of women undergoing abortions who had one or more previous abortions was higher for women having abortions in England and Wales (36%) than those having abortions in Scotland (31%).

¹ ICD-10 codes are taken from the International Statistical Classification of Diseases and Related Health problems (Tenth Revision) published by the World Health Organisation (WHO)

² the all mentions totals show abortions where more than one medical condition is reported. Totals therefore do not equal the number of abortions performed under Ground E

Other conditions in 'other' may be available by ICD-10 code on request.

³ Total includes one ground A case over 24 weeks gestation which is counted in 'other'.

* Cases where diagnosis is 'not known' are being followed up

Note: percentages are rounded and may not add up to 100

Table 9b: Legal abortions performed under ground E by gestation weeks, residents of England and Wales, numbers, 2013

England and Wales, residents

numbers

| Procedure | Gestation weeks for abortions performed under ground E | | | | | | |
|---|--|------------|------------|------------|------------|------------|-------------|
| | Total | under 13 | 13 & 14 | 15 & 16 | 17 to 19 | 20 & 21 | 22 and over |
| Total abortions | 2,732 | 389 | 785 | 347 | 307 | 497 | 407 |
| Surgical | 736 | 230 | 363 | 69 | 20 | 21 | 33 |
| Vacuum Aspiration | 453 | 185 | 268 | 0 | 0 | 0 | 0 |
| Dilatation and Evacuation | 176 | 16 | 62 | 65 | 16 | 14 | 3 |
| Feticide with a surgical evacuation ¹ | 107 | 29 | 33 | 4 | 4 | 7 | 30 |
| Medical | 1,996 | 159 | 422 | 278 | 287 | 476 | 374 |
| Antiprogestosterone with or without prostaglandin | 1,558 | 158 | 418 | 271 | 278 | 395 | 38 |
| Other medical agent | 23 | 1 | 4 | 6 | 8 | 3 | 1 |
| Feticide with a medical evacuation ² | 415 | 0 | 0 | 1 | 1 | 78 | 335 |

¹ includes feticide with no method of evacuation and surgical 'other'.

² includes 8 cases where use of feticide was not confirmed at time of publication.

Table 9c: Legal abortions performed under ground E by gestation weeks, residents of England and Wales, percentages, 2013

England and Wales, residents

percentages

| Procedure | Gestation weeks for abortions performed under ground E | | | | | | |
|---|--|------------|------------|------------|------------|------------|-------------|
| | Total | under 13 | 13 & 14 | 15 & 16 | 17 to 19 | 20 & 21 | 22 and over |
| Total abortions | 2,732 | 389 | 785 | 347 | 307 | 497 | 407 |
| Surgical | 27 | 59 | 46 | 20 | 7 | 4 | 8 |
| Vacuum Aspiration | 17 | 48 | 34 | 0 | 0 | 0 | 0 |
| Dilatation and Evacuation | 6 | 4 | 8 | 19 | 5 | 3 | 1 |
| Feticide with a surgical evacuation ¹ | 4 | 7 | 4 | 1 | 1 | 1 | 7 |
| Medical | 73 | 41 | 54 | 80 | 93 | 96 | 92 |

^p Provisional data

* Adhering to ISD Statistical Disclosure Control Protocol. See annex B

.

¹ Some notifications record more than one Statutory Ground, therefore totals may not match with the numbers released by ISD Scotland.

Source: ISD Scotland, Department of Health

Note: percentages are rounded and may not add up to 100

Annex A: Data Quality and Methods

- **Validation**
 - i. The Department of Health use a thorough process for inspecting and recording the information received on the forms in order to monitor compliance with the legislation and the extent to which best practice guidance from the Department of Health is followed. Selected forms are scrutinised by a medical practitioner who may request further detail from the patient's medical record via the terminating doctor. Further details of the checks that are made on the data are available on the GOV.UK web site at:

<https://www.gov.uk/government/publications/abortion-notification-forms-for-england-and-wales>

- **Forms returned after the publication cut-off date**
 - ii. The 2013 figures in this annual bulletin are based on a snapshot of the records taken about eight weeks prior to publication. A small number of notifications have been, and will continue to be, received after this cut-off date. Whilst these additional notifications are processed and the information retained in line with our retention policy, they are not included in future statistical releases. So, for example, figures for 2012 published in the 2012 bulletin have not be revised in this year's bulletin. This policy of not revising statistics is taken for three main reasons:
 - to prevent the disclosure of personal information arising from small differences in published tables;
 - to ensure consistency in published outputs over time; and
 - because the revisions would be small in scale and therefore of little value.

- iii. The scale of the effect is illustrated below for 2012. A further 454 notifications were received after the cut-off, equating to a quarter of one per cent of the published total. 1 of these late notifications was for an abortion over 24 weeks. As the table below shows, the inclusion of this information would have resulted in no change in the percentage breakdowns by age group, gestation and grounds to one decimal place.

Table: Examples of the effect on the statistics of forms returned after the publication cut-off date

| | Published 2012 figures | 2012 figures incorporating notifications received after the publication cut off |
|-------------------|------------------------|---|
| Total abortions | 185,122 | 185,576 |
| Gestation (weeks) | | |
| 3 to 9 | 77.4% | 77.4% |
| 10 to 12 | 13.5% | 13.5% |
| 13 to 19 | 7.5% | 7.5% |
| 20 or over | 1.5% | 1.5% |
| Not known | N/A | 0.0% |
| Grounds | | |
| E | 1.5% | 1.5% |
| Other | 98.5% | 98.5% |
| Age | | |
| Under 20 | 16.9% | 16.9% |
| 20 to 34 | 68.5% | 68.5% |
| 35 or over | 14.5% | 14.5% |

- **Incomplete information and imputation**

- iv. Incomplete and incorrectly completed forms are returned to practitioners for completion and clarification. In a very small number of cases (about one-quarter of one percent), the information remains unavailable at the time of publication. Date of birth was missing from 6 records in 2013, gestation information from 46, postcodes from 40 and grounds from 30.
- v. For the purposes of constructing statistics, values for missing items are imputed. Records with missing ages were assigned pro-rata to the 20-24 age group, as this is the modal age group, accounting for 30% of abortions. Missing gestations were imputed as 6, 7, 8, 9 or 10 weeks in equal distribution unless the method of abortion or diagnosis suggested otherwise. Missing postcodes were imputed with a random postcode from within the main PCOs of other residents attending the same hospital or clinic. Missing grounds were imputed as ground C.

- Population estimates used for rates of abortion

- vi. Abortion rates are calculated using the conventional age range for women in their child bearing years, 15 – 44.
- vii. Abortion rates per 1,000 women for 2013 at a national level and at CCG level were calculated using the mid-2012 population estimates for England, Wales, England and Wales, Clinical Commissioning Groups and Locality Office, as published at 26th June 2013¹. Rates for earlier years were calculated using the latest population estimates available at the time the relevant annual reports were produced and have not been revised, either by using population estimates for the year in question or by using updated population estimates.

- Deriving age standardised rates of abortion

- viii. Age standardised rates allow comparison between populations which may contain different proportions of people of different ages. The European Standard Population (ESP) is a widely used artificial population structure for the calculation of directly age standardised rates. The replacement of the ESP first used in 1976 with an updated version published in 2013 resulted in an increase of all-cause mortality rates for England and Wales by 85% and all-site cancer incidence rates for England by some 48%. Figures using the 1976 and 2013 ESPs are therefore not comparable. Information about this change in methods can be found on the ONS website at: <http://www.ons.gov.uk/ons/guide-method/user-guidance/health-and-life-events/revised-european-standard-population-2013--2013-esp-/index.html>
- ix. The effect of implementing the 2013 ESP for abortion age standardised rates is small. The vast majority of abortions occur within the age range 15-44. The 1976 ESP assumed equal populations at each single age between 15-44 (see Annex table 1 below). The 2013 ESP has made only a small change to the populations within age range 15-44 such that although not equal, it remains fairly uniform. Thus, the 2013 ESP brings the abortion age standardised rates down by about 4% in recent years and 2% in earlier years. The time series using 2013 ESP age standardised rates back dated to 1968 is presented in table 1 of the detailed tables.
- x. The formulae used to calculate the age-standardised abortion rates are given below.

For the analysis of trends in abortion rates for England and Wales:

$$AgeS \quad eS \quad eS = S \frac{\sum S \quad eS}{\sum S}$$

Where 'rate_i' is the crude rate for women aged i and ESP_i is the population of women aged i in the 2013 European Standard Population.

¹ Available at http://www.ons.gov.uk/ons/dcp171778_315456.pdf

For the area analyses in table 10b:

$$AgeS \quad e \quad e = \frac{\sum eS}{\sum S}$$

where the rate for women aged under 16 (rate 15) =

$$\frac{eS}{15S} \quad e \quad 16S$$

and the rate for women aged 44 and over (rate 44) =

$$\frac{eS}{44S} \quad eS \quad ge \quad 44S \quad eS$$

Annex table 1: European Standardised Population

| Age group | 1976 ESP | 2013 ESP |
|-------------|----------|----------|
| Under 1 | 1,600 | 1,000 |
| 1-4 | 6,400 | 4,000 |
| 5-9 | 7,000 | 5,500 |
| 10-14 | 7,000 | 5,500 |
| 15-19 | 7,000 | 5,500 |
| 20-24 | 7,000 | 6,000 |
| 25-29 | 7,000 | 6,000 |
| 30-34 | 7,000 | 6,500 |
| 35-39 | 7,000 | 7,000 |
| 40-44 | 7,000 | 7,000 |
| 45-49 | 7,000 | 7,000 |
| 50-54 | 7,000 | 7,000 |
| 55-59 | 6,000 | 6,500 |
| 60-64 | 5,000 | 6,000 |
| 65-69 | 4,000 | 5,500 |
| 70-74 | 3,000 | 5,000 |
| 75-79 | 2,000 | 4,000 |
| 80-84 | 1,000 | 2,500 |
| 85 and over | 1,000 | - |
| 85-89 | - | 1,500 |
| 90-94 | - | 800 |
| 95 and over | - | 200 |
| Total | 100,000 | 100,000 |

- Confidence intervals

- xi. The figures recorded in this report are the outcome of a stochastic process – that is, they are influenced by chance or random processes such as fertilisation. Each recorded figure is only one of a range of results that could have occurred under the same circumstances if those random processes had led to different outcomes. It is often the underlying circumstances or process that is of interest and the actual value observed gives only an imprecise estimate of this ‘underlying risk’. For example, users are often interested in understanding whether there has been a change in rates of abortion, perhaps reflecting a change in the prevalence of risky sexual behaviour, a change in attitudes towards the options available in pregnancy or a change in access to services. To assess this, it is necessary to determine if the observed change is one that is unlikely to be the result of random fluctuation and therefore offers evidence that a real change has occurred.
- xii. A confidence interval can be calculated around each observed value, which gives a range in which the expected or average value resulting from the underlying process is likely to fall. The 95 per cent confidence intervals have been calculated for some of the observed values in tables 10a, 10b, 10c and 11. These are known as such, because if it were possible to repeat the underlying process under the same conditions a large number of times (that is, ‘rerun’ the year over and over again), 95 per cent of the confidence intervals calculated in this way would contain the average value from those runs. When assessing the observed results for the year, it is usual to assume that there is only a 5 per cent chance that the expected or average value falls outside the 95 per cent confidence interval.
- xiii. The confidence interval may be used to compare an estimate against a target or benchmark value. If the target or benchmark value is outside the confidence interval it can be inferred that the difference between the estimate and the target is statistically significant at the 95 per cent confidence level.
- xiv. Confidence intervals are also often used to compare two observed values (for example, abortion rates within two regions.) Sometimes in such cases statistical testing is undertaken by seeing if the two confidence intervals overlap. This is quick and easy to do, but not necessarily conclusive: whilst it is safe to assume that non-overlapping confidence intervals indicate a statistically significant difference, it is not always the case that overlapping confidence intervals do not.
- xv. The method for estimating a confidence interval varies depending on whether it is for a percentage, count, crude rate or standardised rate. The methods used are those detailed in the Association of Public Health Observatories’ Technical Briefing 3: Commonly used public health statistics and their confidence intervals.
- xvi. For example, the 95 per cent confidence interval associated with:
 - The figure of 185,331 for the total number of abortions of residents in England and Wales is 184,448 – 186,177 (Table 10a);
 - The age standardised rate of 15.94 abortions per 1000 resident women aged 15-44 in England and Wales is 15.7 to 16.2 (Table 10b);

- The figure of 84.4 per cent for the percentage of NHS funded abortions in NHS Eastern Cheshire CCG undertaken within 10 weeks gestation is 81.2 per cent to 87.8 per cent (Table 11).

- **Disclosure Control**

xvii. The Data Protection Act 1998 places a statutory obligation on the Department of Health to ensure that the statistics we release on abortion do not relate to a living individual who can be identified from those data alone or in conjunction with other available information, unless the conditions laid out in the Act are met. In recent years, the Department has attempted to meet this obligation by following the disclosure guidance for abortion statistics developed by the Office for National Statistics in July 2005. A judgment was handed down in 2011 by the High Court in a case relating to the release of information on principal medical condition for abortions performed under Ground E, showed that the disclosure controls set out in the guidance were overly cautious in some circumstances. The format of the tables in the annual report have therefore been revised, with a more limited degree of suppression applied, where still necessary to avoid the disclosure of personal data.

- **Geographical coding and naming**

xviii. On 1st January 2011, the Government Statistical Service introduced a new coding and naming policy for statistical geographies. Nine-digit codes have been developed to ensure consistency when comparing geographical areas as the geographical area covered by an NHS organisation is susceptible to change. These unique markers have been added to the relevant tables within this publication.

xix. On the 1st April 2013 Clinical Commissioning Groups assumed commissioning of termination of pregnancy services under the health system reforms. Further information on the Coding and Naming for Statistical Geographies is available at:

<http://www.ons.gov.uk/ons/guide-method/geography/geographic-policy/coding-and-naming-for-statistical-geographies/index.html>

- **Rounding**

xx. Percentages are subject to rounding and totals may not agree with the sum of the component figures shown. Rates are also rounded.

- **Symbols**

xxi. The following symbols are used in the tables:

. = not applicable

.. = suppressed value to protect patient confidentiality
