1. About this document

This document contains both the validation and business rules, which will form part of the Validation, checks that will need to be undertaken by both the IR E portal or that developed by third party software suppliers

Section 3 of the document outlines the general validation rules that should be applied to data or groups of data (for example it defines alpha/numeric fields) across all input forms.

Section 4 describes in tabular form the data requirements for each field. The columns in this section contain the following information:

Column	Rule Type
Pre-condition & Post-Condition	Schema Validation Rules
Validation / Processing	Business Validation Rules applied after the schema validation rules have been passed

2. Pension Scheme System Acceptable Characters

The following is a list of characters that will be accepted by the Pension Schemes Online.

- A to Z (upper case)
- a to z (lower case)
- 0 to 9 (numeric)
- space & ' () * , . / % ! + - : ; = ? @ [] ^ _ { } ~
- Please note that the ampersand (&) and apostrophe (') characters **must** be transmitted in escaped format within your XML submission, i.e. & and '
- Note that the pound (£), dollar (\$) and hash (#) characters are not allowable.

You must ensure that all characters contained within your XML submissions are in accordance with the patterns defined within the Schema.

No other characters will be accepted by Pension Scheme System and PSS forms submitted electronically, which contain invalid characters will be rejected.

3. General Validation Rules

The following rules apply globally:

1. Alpha characters are defined as A-Z upper and lower case.
2. Numeric is defined as 0-9.
3. Alphanumeric is defined as the combination of Alpha and Numeric characters.
4. The full character set is defined as all the characters as defined in section 4.
5. Date fields are in the format CCYY-MM-DD
6. All currency fields should use IrnonNegativeWholeUnitsMonetaryType. Zero is an acceptable value for Currency fields unless specified in the validation section of the relevant field.
7. The Yes/No code is a user defined data type that reflects the variables in the fields requiring the return of a Yes or No value. This should be represented as 'yes' or 'no'.
