

To whom it may concern

I would like to take the opportunity of the current consultation period to comment on the potential waste of public and personal money that the nuclear new build is.

Reports on Hitachi's reactors in Japan suggest that they are only running a 45% efficiency, much lower than the energy sector is anticipating from these plants

Contract for difference subsidy to build these inefficient plants is pure fraud of the populace, as Germany is proving how efficient, safe and eventually cheaper truly green and renewable sources of energy are.

I would personally be much happier if my investment in energy went towards renewable sources such as wind and solar, and especially into energy efficiency measures, which would provide a genuinely sustainable supply well onto the future without the associated health and accident risks of nuclear power.

It makes absolutely NO SENSE to continue building on the already intolerable pile up of waste at Sellafield, which has already contaminated the Irish sea and the locality....there is no solution for nuclear waste it is dangerous for thousands of yearshow is that efficient green sustainable or cheap?

Here in Bristol we are sitting on a tidal range which is one of the highest in the world....not only could this prove to be a source of flooding, putting our present nuclear facilities in danger but also a source of enormous power.

Bristol city council admitted they cannot possibly evacuate the citizens of Bristol should there be an accident happen at Oldbury or Hinkley Point.

<http://www.bristolpost.co.uk/S-JOB-CITIZENS-BRISTOL-SAFE/story-20492451-detail/story.html>

The KIKK report in Germany and Dr Fairlie's study in the UK has proven childhood leukemias are prevalent near nuclear power stations.

Yablakov's Chernobyl : COsequences of the catastrophe for people and the environment proves that 80% of children in the Chernobyl affected areborn with something wrong with them.as are

Accidents happen , Fukushima has happened and DECC cannot keep the voices of "the anti nuclear chaps and chappesses down"

<http://www2.canada.com/theprovince/news/story.html?id=70951343-0349-4b8f-9dd1-456d50853e5e>

Nuclear will not protect us from climate change, it exasperate the problems of climate change since we are likely to be prone to flooding, our nuclear faciities will go into major crisis.

Nuclear is NOT GREEN , NOT SAFE, NOT RENEWABLE, NOT INSURABLE

This is a criminal conspiracy and you are liable for defrauding the English public, your reasons for new nuclear are a flimsy lie with dangerous consequences for this and future generations.

Ornella Saibene
