

UKSPACEPORT

Essential criteria (concept visual)

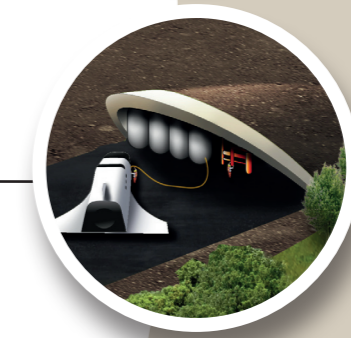

Weather
Operations would require favourable meteorological conditions

Safety
Located away from densely populated areas and at a coastal location

Airspace
Spaceplane operations would need to be conducted in segregated special use airspace away from normal air traffic routes

Environmental
Aviation environmental regulations would apply to operations and cover noise, air quality and storage of materials (e.g. fuel)

Transport
The location would need to be accessible to both employees and visitors and have suitable transport links

Runway
An established large site with a runway that is at least, or capable of being extended to 3000m (9,800ft)
