MRRS 4103 EcoLab – EnCompass Hygiene Intelligence Program

06 October 2014

Recommendation 4a: Not a significant improvement on equipment/materials/products already available which claim to contribute to reducing health care associated infection; no further consideration needed

This product is a system that claims support of a standardised approach to assessing, reporting and analysing environmental cleaning performance for improvement purposes. The RRP noted the objective manner of auditing, however required further evidence to demonstrate improvements over current in-use competitors.
