

### **POULTRY AND POULTRY MEAT STATISTICS**

The latest National Statistics produced by Defra on the activity of UK hatcheries and poultry slaughterhouses and other related poultry statistics were released on 25 July 2013 according to the arrangements approved by the UK Statistics Authority.

This notice will be updated at 09:30 on 29 August 2013.

#### Contents:

Section 1: UK Hatcheries Data – Chick Placings and Eggs Set

Section 2: UK Poultry Slaughter, Average Weights and Poultry Meat Production

Section 3: Methodology, notes and revisions policy

## **Key points**

This release shows the latest monthly information on poultry outputs, including hatchery, slaughtering and production statistics. The key results for **June 2013** are given below:

- UK broiler chick placings were 2.3 per cent higher than June 2012 at 74 million birds and UK turkey placings were 13 per cent higher than June 2012 at 1.7 million birds.
- UK broiler slaughterings were 3.2 per cent higher than June 2012 at 70 million birds. UK turkey slaughterings were 11 per cent lower than June 2012 at 1.0 million birds.
- UK poultry meat production was 126 thousand tonnes, 5.0 per cent higher than in June 2012.

## Section 1: United Kingdom Hatcheries Data – Placings And Eggs Set

The tables below show the number of chicks placed and eggs set by United Kingdom hatcheries. The number of birds placed each month shown below give an indication of future poultry meat and egg production. The number of eggs set each month indicates how many birds will be available for placing in future months. The surveys are run according to statistical, rather than calendar, months with January, April, July and October being five week periods and other months being four week periods. The effect of this is clearly seen in the charts. The twelve month moving totals can be used to get a clearer idea of trends.

<sup>(</sup>a) Converted to whole bird equivalent carcase weight net of offal

<sup>(</sup>b) Excludes other poultry types, e.g. geese

<sup>\* 5</sup> week months

## **Methodology Notes and Revisions policy:**

- 1. The information in this notice is used by the UK government and the EU as evidence for assessing market conditions and evaluating agricultural policy. The hatchery statistics are also required by the EU under Regulation (EC) No 617/2008 and 1234/2007. The poultry slaughterings and weight statistics are also required monthly under EU Regulation 1165/2008. Other users include the food and farming industry, academia and the general public. Contact details are available on the front page of this notice, for you to send feedback or ask questions about the information provided.
- 2. Defra runs a monthly survey of registered England and Wales hatcheries. It is a statutory survey of 42 respondents that collects information on the number of eggs set and the chicks placed by hatcheries. The response rate is typically 100%. Similar surveys are run by the Rural & Environment Research and Analysis Directorate (RERAD) for Scotland and the Department of Agriculture and Rural Development (DARD) for Northern Ireland.
- 3. Poultry slaughterings and poultry meat production statistics are estimated from the number of chicks placed by hatcheries and day old chick imports using industry advice on life-spans and mortality. Average liveweights for each type of poultry are obtained from Defra's monthly survey of England and Wales poultry slaughterhouses. This is a sample survey of large poultry slaughterhouses, around 26 respondents. Similar surveys are run in Scotland and Northern Ireland. Meat production is calculated from the estimated number of birds slaughtered and the average liveweights. The liveweight is converted to carcase weight using industry advice on conversion factors.
- **4.** Survey data are subject to a variety of validation checks which identify inconsistencies in the data. All data are cleaned prior to publication in discussion with the survey respondents.
- **5.** The percentage changes shown are calculated using unrounded figures. Any percentage changes calculated using the published (rounded) figures may differ slightly from the changes shown. The UK 12 month moving totals represent the sum of the 12 months up to and including the date indicated and can be seen as a trend measure that is not affected by seasonality.

#### **Revisions**

- **6.** Figures in this notice are provisional and subject to revision. We will provide information about any revisions we make to previously published information in this statistics notice and the associated datasets. Revisions could occur for various reasons, including:
  - a. if we have not received survey data from respondents we make an estimate based on their previous returns. These estimates are replaced with actual survey data when it is received.
  - b. survey respondents occasionally supply amended figures for previous periods.
  - c. we may also revise the methodology used to raise the survey data to give UK totals.

This month minor revisions have been made to the hatcheries data from January 2013 and the slaughter and production data from February 2013 for the reasons given above.
