

Response by NuGeneration Ltd to the Consultation on the Nuclear Industry Association's Application to Justify the UK Advanced Boiling Water Reactor (UK-ABWR)

NuGeneration Ltd. ("NuGen") is a UK nuclear company owned by GDF SUEZ and IBERDROLA. NuGen's Moorside project focuses on the development of a new generation nuclear power station of up to 3.6 GW on land to the north and west of the Sellafield site in West Cumbria, North West England.

1. Do you agree with the Government's preliminary view that the class or type of practice set out in the application submitted by the Nuclear Industry Association:

(a) qualifies as a new class or type of practice; and

(b) is a suitable class or type of practice for a decision by the Secretary of State?

If not, why not?

Yes, Nugen agrees with the Government's preliminary view that the class or type of practice qualifies as a new class or type of practice and is suitable for a decision by the Secretary of State.

2. Does the application contain sufficient information to enable the Justifying Authority to make an assessment of the class or type of practice in the application? If not, what further evidence is needed?

NuGen believes that any such application should include specific information related to ABWR, regulatory compliance information along with safety compliance information and costs. The NIA application includes sufficient information related to these and thus we believe that the information contains sufficient information for a review and assessment by the Justifying Authority.

3. Do you have any comments on the arguments or evidence in the NIA's application? Are there any additional arguments or evidence which the Justifying Authority should consider?

No, we do not have any comments.

4. Do you have any other comments on the Secretary of State's preliminary view of the class or type of practice, on the approach of the NIA, or any other options?

No, we do not have any comments.

5. As part of the further consultation on the draft decision document, the Secretary of State proposes to run public engagement events. Do you have any suggestions about the format of such events?

We appreciate the decision to hold a public engagement event, and we look forward to participate in the event.
