## Part 1 (for issue to Regulated Community)

## INTRODUCTION (Not more than 250 words)

This minor change corrects an error in one of the data tables within this leaflet.
The error was noticed within the original data set by those that undertook the study which produced it. An incorrect method for measurement was used for obtaining "Sitting Vertical Functional Reach.
The use of this data from the 2007 Anthropometric Survey of Service men and women was validated and ratified at MASAAG 69 and JAC 173. This error within the wider set was no known at time of ratification. Incorporation of the correct values is not seen as a change which requires external ratification. The paper will be ratified by the 00-970 Lead editor ADS1 and subsequently reported at MASAAG 73 and TAAG 2.

Page 1 of 8

The new text will be clearly identifiable within Annex A..

## SUMMARY OF PROPOSED AMENDMENT

Change: An update to the measurement for "Sitting Functional Reach"
Pg 4 of leaflet 63. From $1165-1400 \mathrm{~mm}\left(3^{\text {rd }}-99^{\text {th }}\right.$ Percentiles) to $1211-1466 \mathrm{~mm}$

## Impact Assessment:

Objective: Intended to remove a minor error in the data used.
Risk Assessment: No associated risks.

Courses of Action. It is recommended to accept this change in data as described above. There are no perceived costs associated with this change. Retrospective Mandation is not required or requested.
$00-970$ Is the UK MoD's baseline in aircraft design, as such it should contain correct information and errors should be corrected once they have been brought to the attention of the MAA.
Preferred Course of Action. The correction should be accepted and the TAAG and MASAAG informed as part of the 00-970 presentation.
Benefits and Costs: Do nothing will result in a known error remaining in the standard. This is not acceptable. No associated costs. Addressing very small errors such as this improves the reputation of the standard and is at the very heart of the sponsor's responsibility to ensure the content remains valid.
Post Implementation Review: Post Meetings: TAAG 2 \& MASAAG 73 the change should be recorded within the minutes.
Consultation period ends: 28-Oct-12
The consultation period for this proposed amendment ends on the stated date. Please send your feedback via email to MAA-Cert-ADS group@mod.uk.

## SECTION 4

## Part 2 (for MAA internal use)

Log of Comments (to be completed once the consultation period has ended).

| Comment <br> reference | Date | From <br> (name) | Post | Précis or <br> Topic of <br> Comment | MAA Response |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |

Recap of Proposal: A short summary of the proposal amendment including what changes were incorporated following the consultation period.

Recommendation. This section will be completed once all the comments have been received. The recommendation is for the relevant Head of Division to approve the proposal.

Approval. This section will detail exactly what has been approved and by whom, and confirm the date for the amendment to be incorporated as well as the date the NPA should be reviewed to determine what the effects of the amendment were in terms of meeting the objective of the change, if there were any unintended consequences and establishing whether the estimated costs were correct.

Accepted changes will be authorised at the following levels:

- Changes requiring retrospective mandation: 2 *
- Changes not requiring retrospective mandation but having an engineering impact: $1^{*}$
- Changes deemed as administrational only: C1 or Equivalent.

Approved by:

| Signature | Signed on original |

Amendment to be Incorporated on $\quad$ XXIXXXIXX

## INTRODUCTION

## AUTHORIZED AMENDMENT

## FURTHER ACTION

## APPROVAL

This Def Stan 00-970 NPA has been approved by the xxxx on behalf of DG MAA

## INCORPORATION

The amendment will be incorporated in..

Signed (IAW with part 2).
for DG MAA

Annex A.

## Proposed change.

## DRAFT OPTION 2

LEAFLET 63

## CREW STATIONS - GENERAL REQUIREMENTS AIRCREW ANTHROPOMETRY

## 1 INTRODUCTION

1.1 This leaflet contains dimensions and weights to be used when designing aeroplanes and cockpit installations.
1.2 Figures 1-4 consist of information taken from Ref 1 which contains a Surrogate Aircrew population of 1,901 men and women extracted as a subset of the 2007 Tri-Service Anthropometric Survey, capturing 117 body measurements, detailed in Ref 2 (see Clause 4.15).
1.3 Figure 5 contains information taken from Ref 3 which contains 2,000 RAF Aircrew that were measured in 1970/71, capturing 88 body measurements.

Note: Anthropometric data is known to alter. For more information contact DESJSCTLS-HFI-Pol@mod.uk.

## 2 DIMENSIONS

2.1 A pictorial index of the measurements in Ref 1 is reproduced in Figs. 1 to 4 together with the $3^{\text {rd }}$ and $99^{\text {th }}$ percentile values.
2.2 The measurements are based upon nude body dimensions so allowances must be made for clothing, harness restraint systems and seat geometry.
2.3 The four most critical body dimensions for cockpit workspace govern aircrew selection. These limitations (1982) and their relation to the $3^{\text {rd }}$ and $99^{\text {th }}$ percentile measurements from the Surrogate Aircrew population are:

|  | Minimum |  | Maximum |  |
| :---: | :---: | :---: | :---: | :---: |
| Sitting Height | 864 mm 3\%ile) | (6 mm > | $\begin{aligned} & \text { 1010mm } \\ & \text { 99\%ile) } \end{aligned}$ | $(15 \mathrm{~mm}>$ |
| Buttock-Knee Length | 560 mm 3\%ile) | $(1 \mathrm{~mm}>$ | $\begin{aligned} & \hline 660 \mathrm{~mm} \\ & 99 \% \text { ile) } \end{aligned}$ | $(3 \mathrm{~mm}<$ |

SECTION 4

| Buttock-Heel Length | 1000 mm <br> $3 \%$ ile $)$ | $(10 \mathrm{~mm}>$ | 1200 mm <br> $99 \%$ ile $)$ | $(24 \mathrm{~mm}>$ |
| :--- | :--- | :--- | :--- | :--- |
| Functional Reach | 740 mm <br> $3 \%$ ile $)$ | $(2 \mathrm{~mm}<$ | 900 mm <br> $99 \%$ ile $)$ | $(6 \mathrm{~mm}<$ |

Note: The small differences between the $3^{\text {rd }}$ and $99^{\text {th }}$ percentile and the critical measurements quoted give some flexibility in selection and growth of aircrew after selection.

## 3 WEIGHTS

3.1 Weights for the $3^{\text {rd }}, 50^{\text {th }}$ and $99^{\text {th }}$ percentile range of aircrew are given below:

| PERCENTILE VALUES |  |
| :---: | :---: |
| $\%$ | Kg |
| 3 | 61.4 |
| 50 | 81.0 |
| 99 | 110.6 |

3.2 These values are for the nude body, so allowances must be made for clothing and aircrew equipment. Both the minimum and maximum aircrew equipment assembly weights must be considered. Typically these are given by the summer/land clothing assembly and the winter/sea assembly respectively. Specialist advice should be sought in the definition of appropriate clothing assemblies and additional aircrew equipment such as maps, CBRN protection, personal weapons, body armour, survival equipment and Night Vision Goggles (NVGs).

## 4. EFFECTS OF CLOTHING AND SEAT GEOMETRY ON NUDE DIMENSIONS

### 4.1 EYE POSITION

4.1.1 The relationship between the seat reference point and the eyeball position of subjects strapped into aeroplane seats is complex. Detailed information has been published (Ref 4).

### 4.2 SHOULDER BREADTH

4.2.1 The clothing assemblies will add $10-20 \mathrm{~mm}$ to the nude Bideltoid breadth (min and max respectively).

### 4.3 BUTTOCK-KNEE LENGTH

4.3.1 The clothing assemblies will add $10-20 \mathrm{~mm}$ to the nude Buttock-Knee length (min and max respectively).

## SECTION 4

## 5 POSITION OF CENTRE OF GRAVITY (CG)

5.1 Where, for design purposes, the position of the CG of the complete body is required, it may be assumed to be at Elbow rest height sitting (Fig 1 dimension "N") and 100 mm (small) to 150 mm (large) forward of the buttock/shoulder tangent line.
