

Monthly UK Sea Fisheries Landings: May 2014

Note to users

Data for the current year will be affected by lags in getting data finalised on our systems. This will affect the year on year comparisons as the 2013 data are more complete. Please refer to Explanatory Notes point 9 for further details.

Key points

- The total quantity of **landings into the UK by UK vessels** for the period January to May 2014 has increased by 15 per cent compared with the same period in 2013. This was driven by a 43 per cent increase in landings of pelagic species.
- The average price for **landings into the UK by UK vessels** for the period January to May 2014 has increased by 2 per cent compared with the same period last year.
- Average prices for **landings into the UK by UK vessels** for the period January to May 2014 have increased by 3 and 28 per cent respectively for cod and haddock compared with the same period last year. This is despite a 14 per cent decrease in supply of cod and only a 4 per cent increase in supply of haddock over the same period. The average price of mackerel was up by 17 per cent, despite a 52 per cent increase in supply. However, hake and sole prices fell by 19 and 11 per cent respectively. The average prices of nephrops (langoustines) and scallops rose by 7 and 6 per cent respectively.
- **Landings by UK vessels into the UK** accounted for 87 per cent of all landings into the UK during May.
- **Landings abroad by UK vessels** accounted for 24 per cent of all landings by UK vessels during May.
- In January to May 2014, the highest amount of **landings by the UK fleet** were in Peterhead - 66 thousand tonnes live weight with a value of £65 million. This was more than double the quantity and value of landings for the second highest port.

Excel versions of the following tables, along with an excel file containing the underlying data are available at:

<http://www.marinemanagement.org.uk/fisheries/statistics/monthly.htm>

Background

This notice provides an overview of the weight and value of landings by UK vessels into the UK and abroad, and by foreign vessels into the UK. The data are based on those landings data to date that have been fully validated. Final figures for the year will be provided in our annual UK Sea Fisheries Statistics publication, released in September.

Comparisons of monthly data should be made with care due to timing lags in the data.

The contents of this report have recently been revised following a user consultation in early 2014. We welcome any further comments or suggestions on this release. Please contact the MMO Statistics team if you have any questions, queries or comments on this release:

Revisions Policy

Revisions to previously published figures for individual months are not provided in this release. However, the figures in this month's release and the accompanying dataset are the latest currently available.

Explanatory Notes

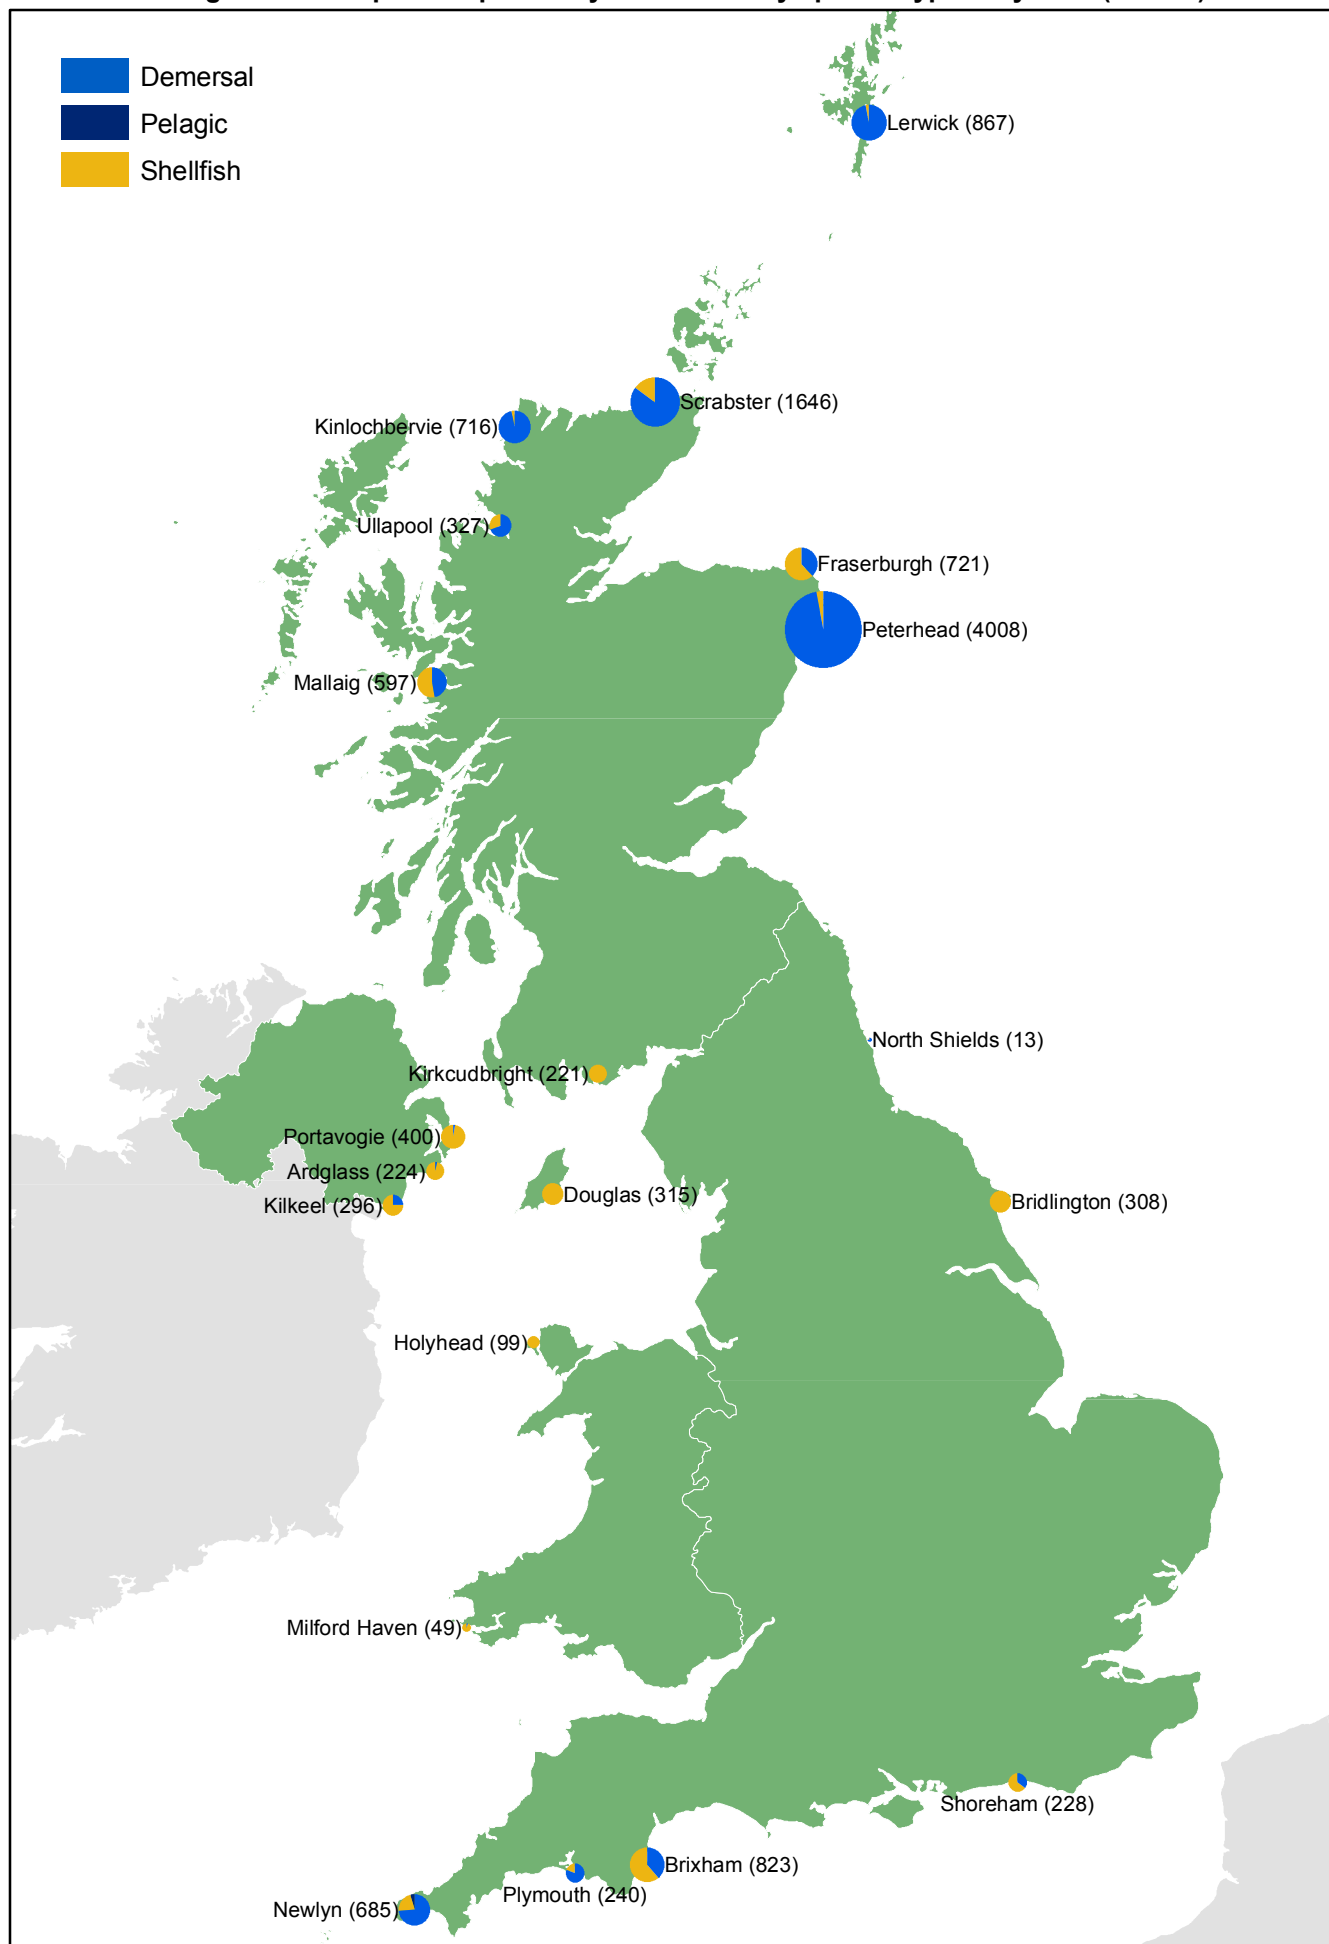

1. Quantities are shown in terms of the live weight of the fish caught.
2. The values shown are based on information from first-hand sales of fish to all outlets, i.e. for human consumption as well as other uses, such as fishmeal and animal feed.
3. The calculation of average prices excludes landings with zero value to better reflect the price of the fish.
4. Other demersal species, as shown in the Tables, includes fish roes and livers.
5. Landings data for UK vessels landing in to the UK includes figures for the Isle of Man.
6. The ports covered in this publication represent those ports which were identified as the top 20 UK ports in terms of quantity landed or the top 20 UK ports in terms of value of landings, in the most recent annual publication. UK Sea Fisheries Statistics 2012
<http://www.marinemanagement.org.uk/fisheries/statistics/annual.htm>
7. Landings by foreign vessels into the UK do not include carrier landings. These are however included in our annual publication (see link above).
8. Details of the methodology can be found at
<http://www.marinemanagement.org.uk/fisheries/statistics/monthly.htm>

9. Data are based on landings data to date which have been fully validated. The summary tables include a year on year comparison of cumulative landings up to and including the latest month. However, the later year's figures will be less complete due to delays in getting all landings data onto the system, and this will have an effect on the percentage change figures shown. Whilst the size of this effect varies by species, a rough guide is that at the total levels, the percentage change shown could be out by up to 5 percentage points, based on analysis of the Monthly Returns published throughout 2013.
10. The following symbols apply throughout:
- means "nil"
 - .. means "negligible" (less than half the last digit shown)
 - na means "not applicable"
