

7 July 2014

Fruit and vegetable wholesale prices - June

The fruit and vegetable wholesale price records the average price at wholesale markets in England. Prices are collected for a selection of the most common home-grown fruit, vegetables and flowers.

Key points

Fruit

Blackberries, cherries and gooseberries appear on the market for the first time this year, with cherries appearing a month earlier than they did last year.

The season for strawberry and raspberry is well on the way now and prices have fallen as supplies have risen. Strawberries in June were selling for £1.92/kg compared to £2.47 in May and there was a larger fall in raspberry prices from £8.64/kg to £5.09/kg.

It is coming to the end of the conference pear season and this has seen a significant rise in price as supplies are very limited. Prices have doubled from £0.52/kg in May to £1.04 in June.

Vegetables

After early season high price for broad beans, peas and courgettes prices have fallen as supplies increase.

The better weather has seen demand for salad crops increase with price increases seen for tomatoes, cucumber and Iceberg lettuce. Additionally the quality and larger sized heads of iceberg became available in June which saw their price rise to £0.38/head in June.

Asparagus prices have risen to £6.13/kg as supplies are limited with the season coming to an end.

A slight increase in carrot prices to £0.33/kg with falling supplies as the season draws to a close.

Flowers

After the dramatic fall in price in May of chrysanthemums due to oversupply prices have risen back up to £0.95/spray

Data uses

The wholesale fruit and vegetable price data is collected to provide data for the Agricultural Price Index, produced by Defra. Data is provided to the Office for National Statistics who use it in the production of the Producer Price Index. Data are provided to Eurostat for their Prix Agricole production, which provides absolute prices for products.

The data are also reproduced in the trade journals.

Change to items collected

From the start of March there was a change to the variety of apples collected. Prices for Red Pippin were replaced with Braeburn prices. This change is due to the increased supply of Braeburn apples and the limited supply of Red Pippin.

Methodology

Trained Horticultural Market Inspectors collect fruit and vegetable data from five wholesale markets across England on a weekly basis. Prices are collected from, Birmingham, Bristol, Liverpool and New Spitafields with flower prices also collected from New Covent Garden. Prices are collected on home-grown produce only for the most common fruit, vegetables and flowers. Up to five most usual prices are collected from each market along with the percentage sold at this price. Additionally information on the supply of produce at each market is recorded.

Defra identify the average price for each product based on the recorded prices and the volume of product sold at that price. The monthly data is a weighted average of the average weekly price.

Monthly data is based on all the weekly data collected that month, based on the date published in the weekly dataset. As some data are collected on the previous day to the published date it is possible that some price data will be recorded against the following month

There are periodic reviews of the produce that is collected, so the items will change over time, and also the markets where the data are collected.
