You could pay back for the
electricity bill
You would be able to spread
the cost of the improvements over time
There would be a low or no
up-front cost to pay for the
up-front cost to
improvements
Interest would be chargeable
on the amount financed
The savings on the energy bill should cover the cost
of the loan (therefore bill
of the loan therefore
should not increase)
The finance would be
aftrached to the property, so
if you move the charge would stay with the property
