

FED Permit

Flow Monitoring Location

A1:OT3 is about flow monitoring of FED for both the existing discharge arrangement and when the new permit comes into force and should be at the same point as A2:OT3. Therefore, A1:OT3 should be moved to the location of SP2 (TM 00288 08797).

Sampling points

The current sampling point (SP1) for the FED effluent is located at the East Syphon Recovery Pit (TM 00065 08890). This will be moved to where SP2 (TM 00288 08797) when the new permit is issued for discharges using A1 (i.e. SP1 and SP2 will all be located at TM 00288 08797) and SP1 needs to be deleted.
