

From: Högler Wolfgang
To: SACN
Subject: Feedback on UK SACN draft vitamin D and health report

To whom it may concern

I am writing to provide feedback on the above draft paper on behalf of the global group of experts responsible for the 'Global Consensus Recommendations for the Prevention and Management of Rickets'. This evidence-based consensus has just last week been accepted for joint publication in JCE&M and Horm Res Paediatr. I take the liberty of attaching the accepted manuscript which is authored by 33 experts from various fields (nutrition, paediatrics, endocrinology, bone, epidemiology, public health) and endorsed by 10 international societies.

This consensus was strictly evidenced-based using the GRADE criteria, and focussed on the prevention of rickets and osteomalacia, covering 5 main sections including public health. We would be happy to answer questions on all aspects of this consensus. I am copying in Prof Tulchinsky, the public health expert involved in the global consensus.

In the interest of public health, it would of course be favourable if main messages from your report were not conflicting with ours.

Sincerely,

PD Dr Wolfgang Högler
Consultant Endocrinologist
Head, Department of Endocrinology & Diabetes
Hon Senior Lecturer, University of Birmingham
Birmingham Children's Hospital
Steelhouse Lane
BIRMINGHAM
