

The Government Chemist

Programme

REACH and CLP enforcement: measurement and related issues for Public Analysts and Enforcement Authorities

Free all day event

Thursday 19 March 2015

REACH dossiers, CLP notifications, safety data sheets and high quality regulatory services all have one thing in common - they rely on the effective use of scientific inputs, including sound measurement strategies and complementary techniques. Coherent data sourcing and interpretation have a vital part to play. To offer the widest possible networking opportunities in this field, we bring together scientists and business planners from both enforcement bodies and those they enforce, REACH and CLP specialists and regulatory stakeholders.

Funded by the UK National Measurement Office, this event will be hosted at the Lodge, IET, Austin Court, Birmingham, B1 2JP, by the Government Chemist.

1000	Registration and coffee	
1030	Welcome	Julian Braybrook, LGC
1035	Enforcement Issues for REACH and CLP	Chris Hunt – Edinburgh Scientific Services
1110	Checking compliance with CLP and CHIP in the laboratory	Mike Potts, Chemicals Regulation Directorate, HSE
1145	Measurement science and technology for effective regulation	Derek Craston, Government Chemist
