Pneumococci in the nose (PIN study)

We are looking at which germs children and families have in their nose. Your nurse will do this by putting a cotton bud in your nose and in your mouth like brushing your teeth, which will help the doctors see what is there.

You can decide if you want to be in this study or not.

You can ask as many questions as you want so that you can understand what will happen if you say yes.

You do not have to take part, it is ok to say no. Even if you say yes, you can change your mind any time, no-one will be disappointed or angry with you.

Your doctors and nurses will still take good care of you when they need to.

The name of the nurse is

.....
