INTRODUCTION

1 Any comments by service users on this publication should be forwarded through the channels prescribed in Army Equipment Support Publication (AESP) 0100-P-011-013. An AESP Form 10 is provided at the end of this section; it should be photocopied and used for forwarding comments on this AESP.

2 AESPs are issued under UKMOD authority and where AESPs specify action is to be taken, the AESP will of itself be sufficient authority for such action and also for the demanding of the necessary stores, subject to the provisions of Para 3 below.

3 The subject matter of this publication may be affected by Defence Instructions and Notices (DINs), Standard Operating Procedures (SOPs) or by local regulations. When any such instruction, Order or Regulation contradicts any portion of this publication it is to be taken as the overriding authority.

4 This Illustrated Parts Catalogue (IPC) is designed as an aid to the identification of components, parts or assemblies of parts of the equipment and to provide information necessary for demanding spares.

5 This IPC may list some or all of the parts comprising the equipment concerned, but only those parts assigned a NATO Stock Number, Service Catalogue or Reference Number will normally be available as spares. Should there be a requirement for an item not assigned a number, demands may be submitted quoting AESP, Item Number, Figure reference and Item Name. Where a manufacturer's reference is known, this should also be quoted.

Quantity

6 The figure in the 'Number Off' column specifies the quantity for the unit (or assembly, sub-assembly etc.); it does not indicate the quantity to be demanded.

Demands

7 When demanding Spare Parts the following particulars must be quoted:

- 7.1 Management Code (Man Code).
- 7.2 NATO Stock Number.
- 7.3 Item Name.
- 7.4 Name of equipment for which the part is required.
- 7.5 Manufacturer's reference, if known.

NOTE

Alternatives quoted apply only to the equipment covered by this IPC.

Modification state

8 When appropriate, a list at the front of each chapter or sub-chapter will indicate the modification numbers which have been incorporated in the IPC by amendment action, subsequent to initial issue.

Annotations

- 9 The following notations are used in this publication:
- 9.1 AR When appearing in the 'Number Off' column indicates that the quantity is 'as required'.
 - 9.2 NI (Not Illustrated) when appearing with a number in the 'Fig Item' column indicates that the item is not illustrated.
 - 9.3 NP (Non Provisioned) when appearing in the 'NATO Stock Number' column indicates that the item may be illustrated, but not available from stock as a replacement item.
 - 9.4 REF In the 'Number Off' column indicates that the item is listed for reference purposes only.

Abbreviations

- 10 Abbreviations and symbols used in the IPC have been approved and are listed separately.

Amendments

- 11 Amendments to the catalogue will be published as and when necessary. These will be numbered consecutively, and the Amendment record sheet is to be completed for each amendment list embodied.
- 12 New or amended material will be highlighted by side lining to show the extent of the amendment.

Indentation

- 13 Items are listed in a logical assembly/disassembly order and are identified by the 'dot system' in which each 'dot' depicts the relationship of the item to the assembly.

MAIN ASSEMBLY

Attaching parts for main assembly.

- . FIRST LEVEL OF BREAKDOWN (Sub-assembly or detail part of main assembly).
Attaching parts for first level.
- .. SECOND LEVEL OF BREAKDOWN (Sub-sub-assembly or detailed part of sub-assembly).
Attaching parts for second level.
- ... THIRD LEVEL OF BREAKDOWN (Sub-sub-sub-assembly or detail part of sub-sub-assembly).
Attaching parts of third level.
- FOURTH LEVEL OF BREAKDOWN (Sub-sub-sub-sub-assembly or detail part of sub-sub-sub-assembly)
Attaching parts for fourth level.

NOTES

- (1) Attaching parts for the Main Assembly are listed at the end of the text of the Main Assembly.
- (2) Catalogue numbers quoted in this catalogue will supersede any number that may have been allocated previously.

Description

- 14 The item Description and Annotation Block is also to convey additional information to the IPC user, such as:
- 14.1 Related location details, i.e. another AESP or Chapter/Item within the AESP.
 - 14.2 Circuit reference numbers relating to the illustration.

Source, Maintenance, Recoverability (SMR)

15 The 'SMR' code indicates the manner of acquiring items for maintenance, repair or overhaul of end items, maintenance levels authorised to perform required maintenance functions and disposition action to be taken on unserviceable items. The following SMR codes with their detail could be used, (Table 1):

TABLE 1 SOURCE, MAINTENANCE-RECOVERABILITY CODES

Interchangeability (ICY)

16 The ICY indicates the interchangeability of two or more items at the same location either for the same configuration or when a Part Number change is involved, across two different configuration standards. The column contains two characters: the first character is used to indicate the item's ICY with the succeeding item listed, eg -9, 9- and 99. The following ICY with their detail could be used.

TABLE 2 ICY CODES

CODE	DETAIL
0	Item not interchangeable.
1	Obsolescent item - Fully interchangeable.
2	Replacement item - Fully interchangeable.
3	Pre-modified item not to be used to replace another item at a different Configuration standard.
4	Fully interchangeable with but not identical to other ICY '4' items. It is only used when items are presented at the same configuration level.
5	Item interchangeable with the ICY '3' item above.
6	Qualified interchangeability, see related location detail in Item Description column.
9	Fully interchangeable item with same NSN but different part number.

Usable on Code Equipment (UCE)

17 The UCE identifies Equipment Variants and Configurations (V/C) and provides the means of relating the applicability of breakdown parts to their respective equipments. It is represented by an alpha character 'A' to 'H' with remaining characters space filled. It is not shown if there is only one build standard. Breakdown parts are represented by the alpha code of their appropriate equipment V/C and the remaining spaces in the column are filled with hyphens '-'.

Usable on Code Assembly (UCA)

18 The UCA identifies Assembly Variants and Configurations (V/C) and provides the means of relating the applicability of breakdown parts to their respective assemblies. It is represented by an alpha character 'A' to 'F' with remaining characters space filled and where printed will be prefixed by a double asterisk (**). Breakdown parts are represented by the alpha code of their appropriate assembly V/C and the remaining spaces in the column are filled with hyphens '-'.

RELATED AND ASSOCIATED PUBLICATIONS**Related publications**

19 The octad for the subject equipment consists of publications shown opposite. All references are prefixed with the first eight digits of this publication. The availability of the publications can be checked by reference to the relevant Group Index (See AESP 0100-A-001-013).
