## EDSSS weekly report statistics

Including new EDs which have recently started reporting\*.

## Key messages

Data to: 24 April 2016

During week 16 there was little change in the levels of attendances for respiratory indicators including acute respiratory infection, influenza-like illness and pneumonia (figures 8, 12 & 13), which remain similar to expected for the time of year.

A data transfer problem in 1 ED has resulted in limited data being available for 20-24/03/16.

## Diagnostic indicators at a glance:

Further details on the syndromic indicators reported can be found on page 9.

**Introduction to the  
EDSSS charts:**

- ▶ Weekends and Bank holidays are marked by vertical **grey** lines (bank holidays **darker**).
- ▶ The entry of each new ED is marked by a vertical **red** line.
- ▶ **A new site is not included in charts until it has reported a minimum of 14 days.**
- ▶ A 7 day moving average is overlaid on the daily data reported in each chart, unless specified.
- ▶ Where the percentage attendances related to an individual syndromic indicator is given, the denominator used is the total number of attendances with a diagnosis code recorded.

**Notes and caveats:**

- ▶ Participating Hospital Emergency Departments (EDs) report to EDSSS through the automated daily transfer of anonymised data to PHE, for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST).
- ▶ Several EDSSS contributing departments are now using the new RCEM Unified Diagnostic Dataset (UDDA) to record diagnoses. Where UDDA is in place the ICD-10 or Snomed CT code is extracted for EDSSS reporting.
- ▶ The syndromic indicators presented in this bulletin are based on the WHO recommendations for syndromes to be used for mass gatherings. Each code system has been mapped to the syndromes described:

**Level 1:** Broad, generic indicator, available using all ED coding systems reported.

**Level 2:** More specific indicator, available from EDs using ICD-10 and Snomed CT.

**Level 3:** Very specific indicator, available from EDs using ICD-10 and Snomed CT.

**Respiratory:** All respiratory diseases and conditions (infectious and non infectious).

**Acute Respiratory Infections (ARI):** All acute infectious respiratory diseases.

**Asthma/Wheeze/Difficulty Breathing:** As indicated by title, including dyspnoea and stridor.

**Bronchitis/ Bronchiolitis:** As indicated by title (excluding 'chronic').

**Influenza-like Illness (ILI):** As indicated by title.

**Pneumonia:** As indicated by title.

**Cardiac:** All cardiac conditions (including 'chest pain').

**Myocardial Ischaemia:** All Ischaemic heart disease.

**Gastrointestinal:** All gastrointestinal diseases and conditions (infectious and non infectious).

**Gastroenteritis:** All infectious gastrointestinal diseases.

**Other (chart only presented when a public health need):**

**Meningitis:** All cause meningitis (exc. meningococcal disease without mention of meningitis).

**Heat/ sunstroke:** As indicated by title.

- ▶ Details on diagnosis are not consistently recorded for all ED attendances and the levels of attendances coded vary considerably between each ED.
- ▶ Where the diagnosis codes used in an individual ED cannot be matched to level 2 and 3 syndromic indicators, the ED is excluded from the analysis of those indicators.
- ▶ If you are interested in joining the EDSSS please contact ReSST using the details below.
