

There is a limit on the total amount of benefit that most people aged 16 to 64 can get. This is called the benefit cap. This means that, in general, households on out-of-work benefits no longer receive more in welfare payments than the average weekly wage for working households.

Main stories

Since the benefit cap was introduced on 15 April 2013, 73,000 households have had their benefits capped to February 2016.

What you need to know

What is the benefit cap?

The benefit cap limits a household's benefit income to:

- £500 a week for couples (with or without children living with them) and single parents whose children live with them.
- £350 a week for single adults without children, or whose children do not live with them.

The cap applies to the combined income from benefits including:

- the main out-of-work benefits (Jobseeker's Allowance, Income Support, and Employment and Support Allowance except when the Support Component is in payment);
- Housing Benefit;
- Child Benefit;
- Child Tax Credit;
- other benefits such as Carer's Allowance, Incapacity Benefit and Bereavement Allowance.

For most capped households the benefit cap is applied by reducing the amount of Housing Benefit they receive, so their total benefits no longer add up to more than the cap level. This report contains official statistics on these households.

The benefit cap can also be applied through Universal Credit (UC). UC is still being rolled out across the country and for different household groups, meaning that the number of households who may have had their UC capped is estimated to be very small. These households are not included in this report.

How is it measured?

The main source of benefit cap data is the Single Housing Benefit Extract (SHBE). This is a monthly electronic scan of claimant level data from Local Authority computer systems. SHBE includes the weekly amount that the HB of a household has been capped by, which is used to produce this analysis.

Data on households who have (previously) been capped that are no longer capped is linked to Her Majesty's Revenue and Customs (HMRC) and DWP benefits data to determine why households are no longer capped.

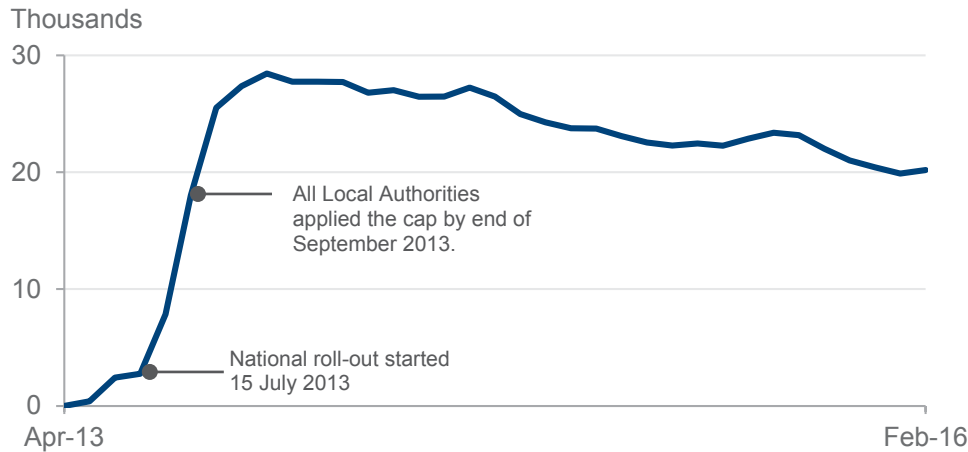

This report contains 3 measures:

- **Point-in-time caseload** counts the number of capped households each month.
- **Cumulative caseload** counts the overall number of households that have been capped from the introduction of the benefit cap to the latest month available.
- **Off-flows** is the difference between the two caseload figures, and shows the number of previously capped households no longer capped at the latest month available.

Number of capped households

The number of capped households at each month is falling

Capped households at each month, 15 April 2013 to February 2016

20,200 households had their Housing Benefit capped at February 2016. This is a decrease of 4%, or 800 households, on the previous quarter (November 2015).

Over the last quarter more households have moved off the benefit cap (3,900) than have been newly capped (3,100). This has led to the decrease in the point-in-time caseload from November 2015 to February 2016.

The benefit cap was introduced from 15 April 2013 in Bromley, Croydon, Enfield and Haringey Local Authorities. All other Local Authorities applied the cap from 15 July 2013 to the end of September 2013.

See Excel [Data table 3](#) or [Stat-Xplore](#) for full data.

New households are still being capped

Cumulative capped households, 15 April 2013 to February 2016

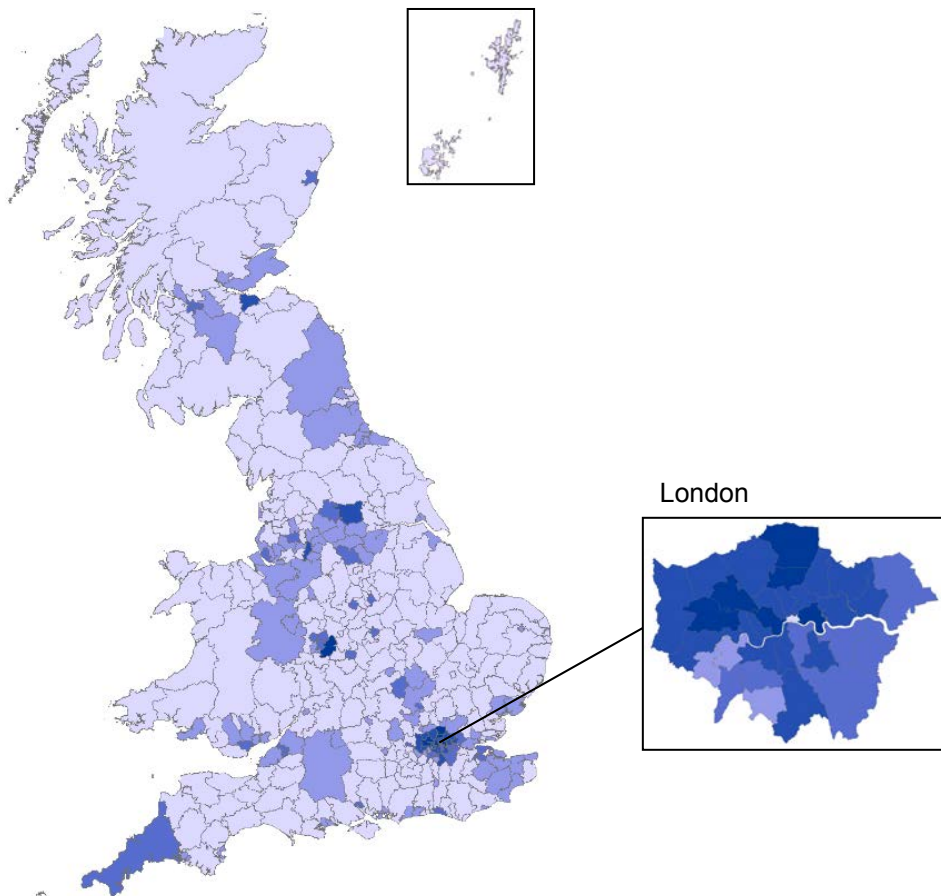

The cumulative caseload of households that have had their Housing Benefit capped since the introduction of the benefit cap continued to rise over the last quarter, to 73,000. This shows that households continue to be newly capped.

See [Stat-Xplore](#) for full data.

Where capped households are

London has the most capped households

Cumulative capped households by Local Authority, 15 April 2013 to February 2016

Since the introduction of the benefit cap to February 2016, 45% of capped households have been in London. Only 2 of the top 20 Local Authorities with the highest cumulative number of capped households are outside London – Birmingham and Edinburgh. This is likely to be a reflection of higher housing costs in London.

This map shows the cumulative number of capped households by Local Authority from 15 April 2013 to February 2016.

The darker areas of the map are Local Authorities with higher numbers of capped households, while the lighter areas are Local Authorities with fewer capped households.

See Excel [Data table 1](#) or [Stat-Xplore](#) for full data.

Where you live

Find more statistics about capped households in your Local Authority on our [interactive map](#), which is updated on a yearly basis and includes data up to August 2015. Key statistics for a Local Authority can be viewed by clicking on the relevant area of the map.

<http://doc.arcgis.com/en/arcgis-online/reference/browsers.htm>

More information

The cumulative caseload is based on the lead claimant. The addition or loss of a partner within a household (or a household moving to a different Local Authority and still subject to the cap) would not be counted as an additional benefit cap case where the lead claimant remains the same and there is no break in claim.

The geographical region or Local Authority reflects the initial Local Authority in which the cap was applied to that household.

The family make-up of capped households

Two-thirds of capped households are single-parent families

Percentage of capped households by family type, at February 2016

66% (13,300) of capped households are single-parent families.

78% (10,400) of single-parent capped households have at least one child aged under 5 years, including 17% (2,250) with a child aged under 1 year at February 2016.

Single-parent capped households by age of youngest child, at February 2016

94% of capped households include children

Percentage of capped households by number of children, at February 2016

60% (12,200) of capped households had between 1 and 4 children and 34% (6,800) had 5 or more children.

Child Benefit and Child Tax Credits are both in-scope for the benefit cap, so families with more children, in receipt of higher amounts of these benefits are more likely to exceed the cap limit and be capped.

See Excel [Data table 2](#) or [Stat-Xplore](#) for full data on the family make-up of capped households. See Excel [Data table 5](#) for full data on the age of youngest child, with data on the cumulative caseload by family type and age of youngest child too.

Benefits claimed by capped households

Capped households claim a range of benefits

Capped households by benefit take-up, at February 2016

Jobseeker's Allowance

Income Support

Employment and Support Allowance (Assessment Stage and Work-Related Activity Group only)

At February 2016:

- 14% of capped households were claiming Jobseeker's Allowance.
- 51% were claiming Income Support.
- 16% were claiming Employment and Support Allowance (Assessment Stage and Work-Related Activity Group only).
- 7% were claiming Carer's Allowance.
- 92% were claiming Child Tax Credits.
- 1% were claiming Housing Benefit only.*

* These capped households were claiming Housing Benefit only from the following benefits in-scope for the cap: Housing Benefit, Jobseeker's Allowance, Income Support, Incapacity Benefit, Employment and Support Allowance, Carer's Allowance, Bereavement Allowance, Child Benefit and Child Tax Credit.

Carer's Allowance

Child Tax Credits

Housing Benefit only*

See Excel [Data table 6](#) for full data.

More information

Capped households can be in receipt of multiple benefits. The benefit cap applies to a household's combined income from a range of working age benefits. This means that a household can be included in multiple categories shown here and therefore percentages do not sum to 100%. More information on benefits that are in-scope for the benefit cap and those that are exempt can be found in the [Background Information and Methodology](#) document.

Analysis is based on benefit claims by the lead claimant in a household, and where applicable, their partner.

The financial impact of being capped

84% (17,000) of capped households were capped by £100 or less a week, including 59% (12,000) capped by £50 or less a week at February 2016.

Less than 1% (100) of capped households were capped by more than £300 a week.

See Excel [Data table 2](#) or [Stat-Xplore](#) for full data.

Most households are capped by £100 or less a week

Capped households by weekly amount capped, at February 2016

Moving off the cap

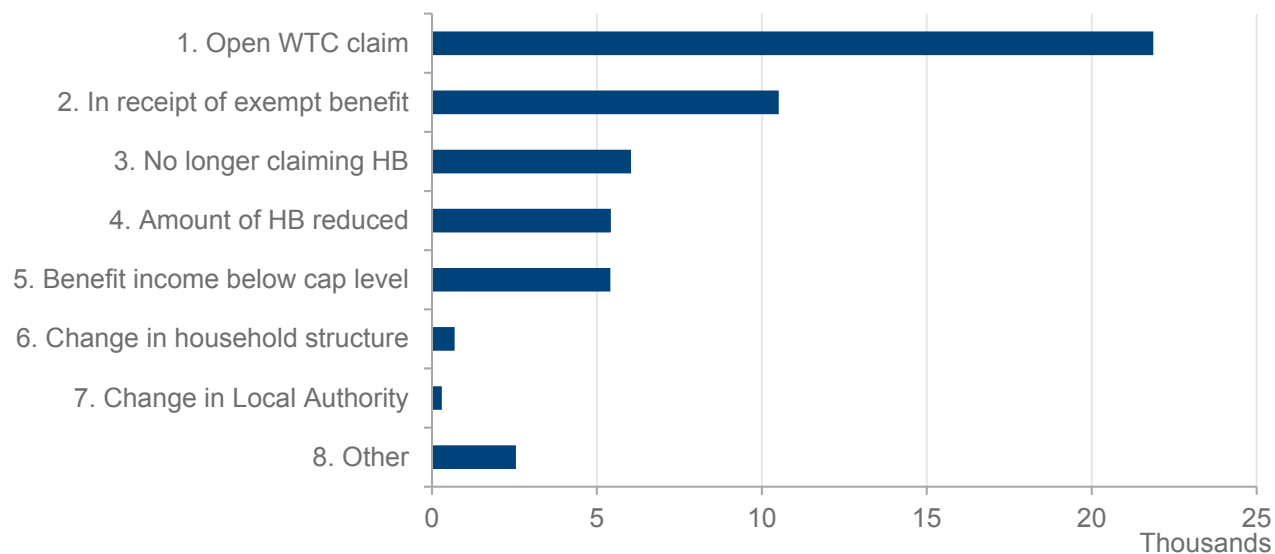

72% (52,800) households that have (previously) been capped are no longer capped at February 2016. Of these, 21,900 are exempt with an open Working Tax Credit (WTC) claim, indicating that they have moved into work. This is 41% of those no longer capped.

For single parent households with a child aged under 5 years, 62% who have (previously) been capped are no longer capped. Of these, 43% are exempt with an open WTC claim.

See Excel [Data table 4](#) or [Stat-Xplore](#) for full data.

41% of households that were capped are in work

Off-flows from the cap by household outcome, at February 2016

More Information

The reason a household is no longer capped may change after a household has moved off the cap. The outcome shows this reason as at February 2016.

There may be a number of reasons why a household is no longer capped. These reasons are ranked (from 1 to 8, as in the chart above) but only the top-most reason for which they are eligible is counted. More information on this can be found in the [Background Information and Methodology](#) document.

About these statistics

Data sources

The main source of benefit cap data is the Single Housing Benefit Extract (SHBE). SHBE is a monthly electronic scan of claimant level data direct from Local Authority computer systems. SHBE includes a field that contains the weekly amount that the Housing Benefit of a household has been capped by. This marker is central to the production of this analysis.

Data on those households who have (previously) been capped that are no longer capped is linked to Her Majesty's Revenue and Customs (HMRC) and DWP benefits data to determine why households are no longer capped.

The age of the youngest child dependant in a household is calculated by merging data held on HMRC child benefit systems to housing benefit data on capped households.

Data coverage and reporting month

Local Authorities extract and return their data to DWP over a four week rolling period based on an extraction schedule for each Local Authority. For example, the latest "February 2016" data shown here has typically been extracted between 25 January and 18 February 2016. Each Local Authority may extract their data up to a week before the date it is scheduled to be returned to DWP. Consequently, the statistics do not directly relate to a particular date but rather show the position of capped cases over a monthly cycle.

Definition of a household

For the purposes of the benefit cap policy and hence this analysis, a household is defined as "one or two adults (living together as a couple) plus any dependant children they are living with." This may also be termed a 'benefit unit'. This differs from the Office for National Statistics (ONS) who define a household as one person alone; or a group of people (not necessarily related) living at the same address who share cooking facilities and share a living room or sitting room or dining area. A household by the ONS definition may contain multiple benefit units.

There are a small number of cases where an individual / household has more than one Housing Benefit claim, for these cases, only the most recent claim is reported on.
