Pesticide Residues in Food**

*Peas without
Pods*

Pesticide Residues Monitoring Report 2015

This is an amalgamation of the quarterly reports

Introduction

We last surveyed peas in 2012. This year peas were being monitored across the EU as part of the EU co-ordinated multi-annual control programme.

The survey included any shelling peas either fresh or frozen.

We sampled and reported peas without pods in every quarter of 2015.

A market research company bought the peas without pod samples from retail outlets across the UK.

Conclusions

Summary statement

None of the residues detected by the laboratory would be expected to have an effect on health.

BAC (benzalkonium chloride)

BAC was detected in 1 sample above the MRL of 0.1 mg/kg for all foods.

However, the position on BAC was reviewed, 0.1 mg/kg is the new MRL that replaced the previous default MRL of 0.01* mg/kg. The EU temporarily allowed trade to continue in foods with residues up to a level of 0.5 mg/kg for food treated before 12 August 2015.

Results

When samples were taken

Between January and November 2015

Number of samples

96 samples were tested for up to 342 pesticide residues

Origin of samples

Fresh

- 26 samples were imported from outside the EU

Frozen

- 61 samples came from the UK
- 9 samples came from the EU

Residues found

73 samples contained no residues from those sought
23 samples contained residues above the reporting level
1 sample contained residues above the MRL
6 samples were labelled as organic. None contained residues from those sought

Multiple residues

5 samples contained residues of more than one pesticide

- 5 samples contained 2 residues

Residues of BAC measured above the MRL of 0.1 mg/kg but below the temporary trading level of 0.5 mg/kg

The laboratory detected 1 residue above the MRL in peas without pods

- 1 sample from Kenya contained a residue of BAC at 0.3 mg/kg. The MRL is 0.1 mg/kg.

Risk assessments

Number of risk assessments

The laboratory detected 6 different pesticide residues. Following the Chemicals Regulation Directorate (CRD)'s risk assessment, we do not expect these residues to have an effect on health.

Combined risk assessments

Some samples contained residues of more than one pesticide. When samples contain more than one pesticide belonging to the groups that CRD usually assess where toxicologists expect these to add to each other's effect (have the same toxicological mode of action), CRD carry out a risk assessment of the combined residues.

In this case CRD did not carry out any risk assessments of combined residues because the laboratory did not find residues belonging to these groups with similar toxicological modes of action in any samples.

Follow up action

Letters sent

The Secretariat wrote to the suppliers of the samples with residues above the MRL.
