## **Public Health Outcomes Framework**

## Indicators at a glance (November 2015)

## Notes:

- Value cells are shaded red, amber or green where the England value can be benchmarked against a goal.
- In the change columns, prev refers to the change in value compared to the previous data point; base refers to the change in value compared to the baseline value.
- Changes are only shown if they are statistically significant. An upwards arrow (↑, ↑ or ↑) represents a significant increase in the indicator value, a downwards arrow (↓, ↓ or ↓) represents a significant decrease. A sidewards arrow (↔) is displayed if there has been no significant change.
- The arrows are coloured green and red for those indicators where a change can be described as improving or worsening respectively.
- Indicators where data has been updated or revised in the latest update have been shaded in the tables.
- Indicators where the value is marked with \* have a data note attached to them. See www.phoutcomes.info for full details
- Indicators where inequalities data is available in the webtool are marked with a  $\neq$ .
