Introduction

This report presents the latest findings from the Justice Data Lab, and summarises the requests for re-offending information through the Justice Data Lab for the period 2 April 2013 to 31 July 2016.

This report has been produced and published in line with the Code of Practice for Official Statistics. This report will be updated and published on the second Thursday of each month for the duration of the Justice Data Lab pilot.

We welcome any feedback on this report or any other Justice Data Lab products. Please use the contact details at the end of this report to let us know your feedback.

What is the Justice Data Lab initiative and how does it work?

The Justice Data Lab is a small team from Analytical Services within the Ministry of Justice (the Justice Data Lab team) that supports organisations that provide offender services by allowing them easy access to aggregate re-offending data, specific to the group of people they have worked with. This service is intended to support organisations in understanding their effectiveness at reducing re-offending.

Participating organisations supply the Justice Data Lab with details of the offenders who they have worked with, and information about the services they have provided. The Justice Data Lab team matches these individuals to the re-offending datasets held within the Ministry of Justice and uses statistical modelling techniques to generate a matched control group of individuals with very similar characteristics. As a standard output, the Justice Data Lab supplies aggregate one year proven re-offending rates for the group of offenders the organisation has worked with, and those of the matched control group of similar offenders.

The re-offending rates for the organisation's group and the matched control group are also compared using statistical testing to assess the impact of the organisation's work on reducing re-offending. The results are then returned to the organisation with explanations of the key metrics, and any caveats and limitations necessary for interpretation of the results.

Finally, the tailored reports produced for each organisation are published on the Ministry of Justice website to promote transparency and ensure that findings produced through this service can be used by others to improve the rehabilitation of offenders.

Key Findings

The following activity has taken place this month:

- One request has been fully answered and is being published this month:

The request is for Caritas Care, a charity which provides mentoring to offenders in order to help them overcome barriers to rehabilitation. This intervention takes place both in prisons and in the community throughout North-West England. The results indicate a non-significant impact on the one-year proven re-offending rate and frequency. However, they do provide significant evidence that participants who re-offend do so quicker than non-participants.

To date:

Between the launch of the Justice Data Lab service on 2 April 2013 and 31 July 2016, there were 179 requests for re-offending information through the Justice Data Lab. Of these requests;

- 135 reports have been published previously. 1 report is being published this month.
- 21 requests could not be answered as the minimum criteria for a Justice Data Lab analysis had not been met.
- 3 requests were withdrawn by the submitting organisation previously.
- The remaining 19 requests will be processed in due course.

Next publication:

The next publication from the Justice Data Lab will be on 8 September 2016.

Definitions used in Justice Data Lab reports:

One-year proven re-offending rate

The one-year proven re-offending rate is defined as the proportion of offenders in a cohort who commit an offence in a one-year follow-up period which was proven through receipt of a court conviction, caution, reprimand or warning during the one year follow-up or in a further six month waiting period. The one-year follow-up period begins when offenders leave custody, start their court sentence, or from receipt of their caution.

Frequency of one-year proven re-offending

The frequency of one-year proven re-offending is defined as the number of re-offences committed in a one-year follow-up period which were proven through receipt of a court conviction, caution, reprimand or warning during the one year follow-up or in a further six month waiting period. The one-year follow-up period begins when offenders leave custody, start their court sentence, or from receipt of their caution.

Time to first re-offence within a year

Time to re-offending is defined as the average number of days between the index date (release date from custody or start of probation date) and the offence date of the first re-offence within the one-year follow-up period described in the definitions above. This measure is only calculated for individuals who re-offended in the one-year follow-up period.

Effect on the severity of re-offending¹

The Ministry of Justice and the Home Office have developed a severity classification system to identify three tiers of offences, with tier 1 offences being the most serious and tier 3 offences being the least serious. These measures look at the severity of re-offences committed during the one-year re-offending period and compare whether the first re-offence was more or less severe than the original offence. The latest classification for tier 1 and 2 offences can be found in Annex A of the 'Measurements and definitions' document, which accompanies proven re-offending quarterly statistics – please see the following link: www.gov.uk/government/uploads/system/uploads/attachment_data/file/368435/proven-reoffending-definitions-measurement-oct13.pdf

Measures of re-offending resulting in custody¹

These measures refer to re-offences committed during the one-year re-offending period that resulted in the individual receiving a custodial sentence. They look at the proportion of offenders who received a custodial sentence for their first re-offence and the number of re-offences per individual resulting in a custodial sentence

¹ These measures will only be included if the categories contain sufficient numbers of individuals.

Summary of the report being published this month

Organisation and programme	Summary of programme	Effect on the one year proven re-offending rate	Effects on the frequency of one year proven re-offending and on the time to first re-offence	Effects on the severity of re-offending and on re-offences resulting in custody
<p>Caritas Care</p> <p>August 2016</p> <p>Mentoring intervention</p>	<p>Caritas Care is a charity which uses one-to-one mentoring to help offenders overcome barriers to rehabilitation such as homelessness, mental health problems, substance misuse, worklessness/inactivity and offending behaviours.</p> <p>This intervention takes place both in prisons and in the community throughout North-West England. It provides a holistic service that addresses the complex needs of its participants. For prisoners, support from a project worker usually begins up to three months before release, and through-the-gate assistance is provided when they re-enter the community.</p>	<p>The one-year proven re-offending rate for 257 offenders who received the intervention was 46%, compared with 42% for a matched control group of similar offenders from England and Wales. This difference is not statistically significant.</p> <p>The estimated impact on the re-offending rate remained consistent when using a control group that accounted for standard offender characteristics only, and when using a control group from North-West England only.</p>	<p>The frequency of one-year proven re-offending for 257 offenders who received the intervention was 2.05 offences per individual, compared with 1.60 offences per individual in the matched control group. This difference is not statistically significant.</p> <p>The estimated impact on the re-offending frequency became significant when using a control group that accounted for standard offender characteristics only. Results remained consistent when using regional control groups from North-West England only.</p> <p>The average time to first re-offence for 118 offenders who received the intervention, and who re-offended within a one-year period, was 117 days, compared with 138 days for those who re-offended from the matched control group. This difference is statistically significant.</p> <p>The estimated impact on the time to first re-offence remained consistent when using a control group that accounted for standard offender characteristics only, and when using a control group from North-West England only.</p>	<p>There were no statistically significant differences between the treatment and control groups in the severity of re-offending.</p> <p>When controlling for both complex and standard offender characteristics, there were no statistically significant differences between the treatment and control groups in the rate or frequency of custodial sentencing for people who re-offended within a one-year period. This remained consistent when using a control group from North-West England only.</p> <p>When using a national control group that accounted for standard characteristics only, the treatment group had a significantly lower rate of custodial sentencing for their first re-offence when compared to the control group.</p>

Measures regarding the rate and frequency of re-offending in severity tier 1 have not been included due to low numbers.

Annex: Links to the Justice Data Lab individual reports published to date. Requests are organised by intervention type, then by most recent publication.

Reviews of the Justice Data Lab service

["Justice Data Lab: The pilot year"](#) shares learning from our experience of running the pilot in its first year, published in March 2014.

["Justice Data Lab: Pilot summary"](#) presents aggregated results from all reports analysed during the two-year pilot period

["Justice Data Lab: Feedback report"](#) shows opinions on the Justice Data Lab gathered from organisations that used the service during the pilot.

Methodology Papers

[Justice Data Lab Methodology Paper](#) shows the methodology agreed for the Data Lab when it was launched in 2013.

[Incorporating Offender Assessment data to the Justice Data Lab process – Methodology](#) explains the method for incorporating Offender Assessment System (OASys) data, to control for specific issues an offender needs help with (e.g. accommodation, relationships, drug/alcohol misuse, mental health).

[Methodology review response](#) – a response to a peer review consultation on Justice Data Lab methodology
