

damaging.

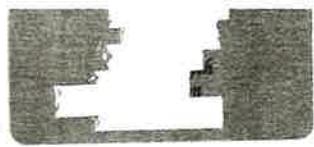

⑤ Where is the comprehensive, independent environmental audit for construction of wind developments in acidic uplands? They + the infrastructure of roads, cabling, overhead lines etc. really are damaging & result in greenhouse gases rather than save.

⑥ We can, post Brexit, pause & rethink environmental policy, renewable energy policy, EU imposed targets, & come up with a policy appropriate to the UK without the imports of turbines etc. from mainland Europe. Wales's countryside degraded by EU policies!

Send the developers packing,
and Save the heartlands of Wales!

Yours sincerely

(anti Cefn Coed Campaigner. 2000 - 2010
- we lost that battle in the High Court in
2003)

No. Proposals wind generating stations in
mid-Wales : Llanbrynmair /& Llanedd Wen

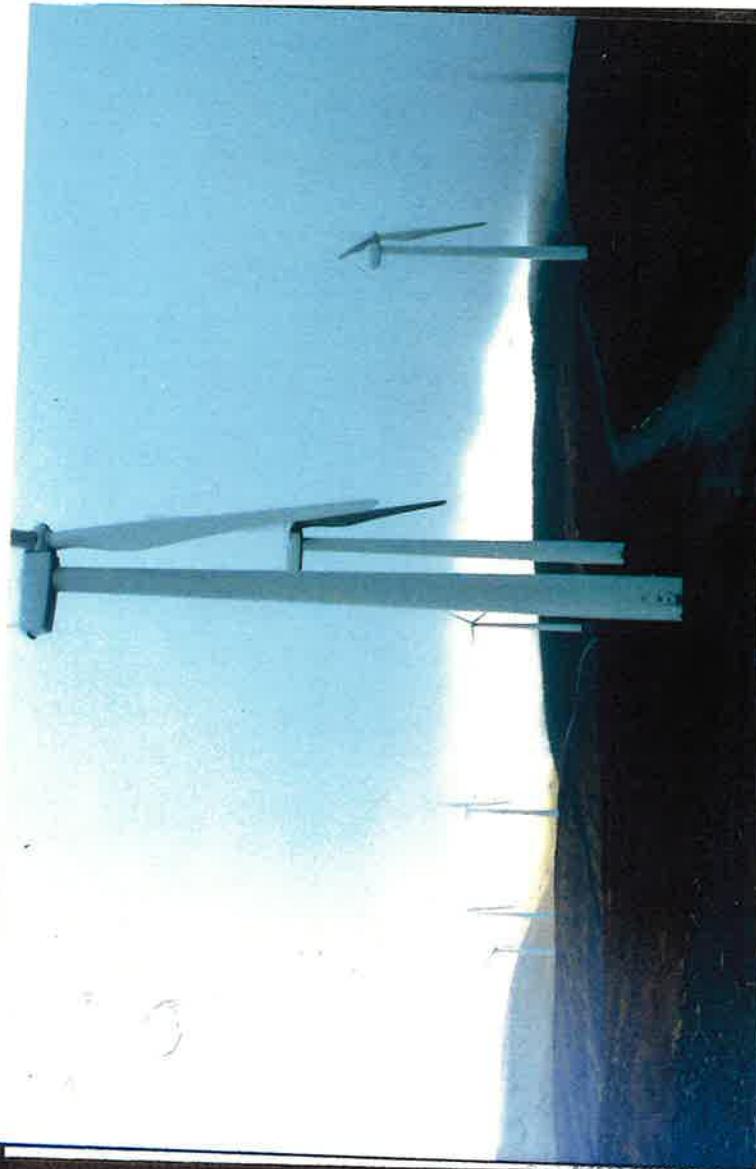

① It is disgraceful that the developer RWE + RES should continue to challenge the SOS's decision to refuse.
'No' should mean 'No'

② Re-determination is unnecessary.

③ The upland landscape of mid-Wales is too precious to be further degraded. For the effects of deleterious cumulative impact look no further than the Scottish borders - S. Lanarkshire, up the M74 & see how fine countryside has been ruined.

④ The small amounts of heavily subsidized intermittent electricity can be better provided by other means, which are not environmentally
