Potatoes

Pesticide Residues Monitoring Report 2015

This is an amalgamation of the quarterly reports

Introduction

We monitor potatoes annually due to their importance as a staple part of the diet. This survey covers both maincrop (or ware) and new potatoes.

We sampled and reported potatoes in every quarter of 2015.

The Animal and Plant Health Agency's Plant Health and Seed Inspectors collected the potato samples from a range of points in the supply chain (wholesalers, potato processors, ports and import points).

We published results for this survey on our website as part of the rolling reporting programme.

Conclusions

Summary statement

None of the residues detected by the laboratory would be expected to have an effect on health.

Results

When samples were taken

Between January and December 2015

Number of samples

156 samples were tested for up to 347 pesticide residues

Origin of samples

Maincrop

- 126 samples came from the UK
- 5 samples were imported from outside the EU
- 5 samples came from the EU

New

- 12 samples came from the UK
- 7 samples were imported from outside the EU
- 1 sample came from the EU

Residues found

73 samples contained no residues from those sought
83 samples contained residues above the reporting level
None of the samples contained residues above the MRL
5 samples were labelled as organic. None contained residues from those sought

Multiple residues

31 samples contained residues of more than one pesticide

- 28 samples contained 2 residues
- 3 samples contained 3 residues

Risk assessments

Number of risk assessments

The laboratory detected 10 different pesticide residues. Following the Chemicals Regulation Directorate (CRD)'s risk assessment, we do not expect these residues to have an effect on health.

Combined risk assessments

Some samples contained residues of more than one pesticide. When samples contain more than one pesticide belonging to the groups that CRD usually assess, where toxicologists expect these to add to each other's effect (have the same toxicological mode of action), CRD carry out a risk assessment of the combined residues.

In this case CRD did not carry out any risk assessments of combined residues

because the laboratory did not find residues belonging to these groups with similar toxicological modes of action in any samples.
