

27 March 2015

## Monthly UK Sea Fisheries Landings: January 2015

### Note to users

Figures for the current year will be affected by lags in getting data finalised on our systems. This will affect the year on year comparisons as the 2014 data are more complete. Please refer to Explanatory Notes point 9 for further details.

### Key points

- The total quantity of **landings by the UK fleet** in January 2015 was 77 thousand tonnes, 19 per cent lower than in January 2014.
- January's catch is dominated by mackerel, although landings of the species fell from 72 thousand tonnes in January 2014 to 57 thousand tonnes this year. Poor weather in the north resulted in a slow start for the fishery. Fishermen may also be aiming to target the autumn mackerel fishery instead, when the fish tend to be larger and prices potentially higher.
- Many other fisheries would have been affected by poor weather. Landings of nephrops, crabs and scallops fell considerably. However, landings of hake and monkfish rose by 30 per cent and 39 per cent respectively. It should be remembered that catches of nephrops, hake and monkfish are restricted by quotas while crabs and scallops have limits on the number of days that can be spent fishing. The UK aims to maximise its fishing opportunities and so working within these limits means, for example, that higher landings early in the year would probably be balanced by lower landings later in the year.
- Overall, average prices for demersal fish and shellfish have risen slightly. However, average prices for pelagic fish were 30 per cent lower in January. This was driven by changing mackerel prices, down from 94p to 66p per kilo.
- In January 2015, the **UK fleet landed** 20 thousand tonnes into Peterhead. This is nearly three times the quantity of landings for Lerwick, the second highest port in terms of landings. Plymouth, with 1,200 tonnes of mostly pelagic fish, had the highest landings in England. However, Brixham and Newlyn led the English ports in terms of revenue (£1.9 million and £1.6 million), since they handled higher value shellfish and demersal species.

Excel versions of the following tables, along with an excel file containing the underlying data are available at:

<https://www.gov.uk/government/statistical-data-sets/monthly-sea-fisheries-statistics-January-2015>

## **Background**

This notice provides an overview of the weight and value of landings by UK vessels into the UK and abroad, and by foreign vessels into the UK. The data are based on those landings data to date that have been fully validated. Final figures for the year will be provided in our annual UK Sea Fisheries Statistics publication, released in September.

Comparisons of monthly data should be made with care due to timing lags in the data.

The contents of this report have recently been revised following a user consultation in early 2014. We welcome any further comments or suggestions on this release. Please contact the MMO Statistics team if you have any questions, queries or comments on this release:

## **Revisions Policy**

Revisions to previously published figures for individual months are not provided in this release. However, the figures in this month's release and the accompanying dataset are the latest currently available.

## **Explanatory Notes**

1. Quantities are shown in terms of the live weight of the fish caught.
2. The values shown are based on information from first-hand sales of fish to all outlets, i.e. for human consumption as well as other uses, such as fishmeal and animal feed.
3. The calculation of average prices excludes landings with zero value to better reflect the price of the fish.
4. The category 'Other demersal' includes fish roes and livers.
5. Data include figures for the Isle of Man fleet and landings by some of the larger Channel Islands' vessels. Relatively small amounts of landings by the remainder of the Channel Islands' fleet are not included. Landings into England in Table 7a exclude data for these islands.
6. The individual ports reported in this publication represent those ports which were identified as the top 20 UK ports in terms of quantity landed or the top 20 UK ports in terms of value of landings, in the annual publication - UK Sea Fisheries Statistics 2013

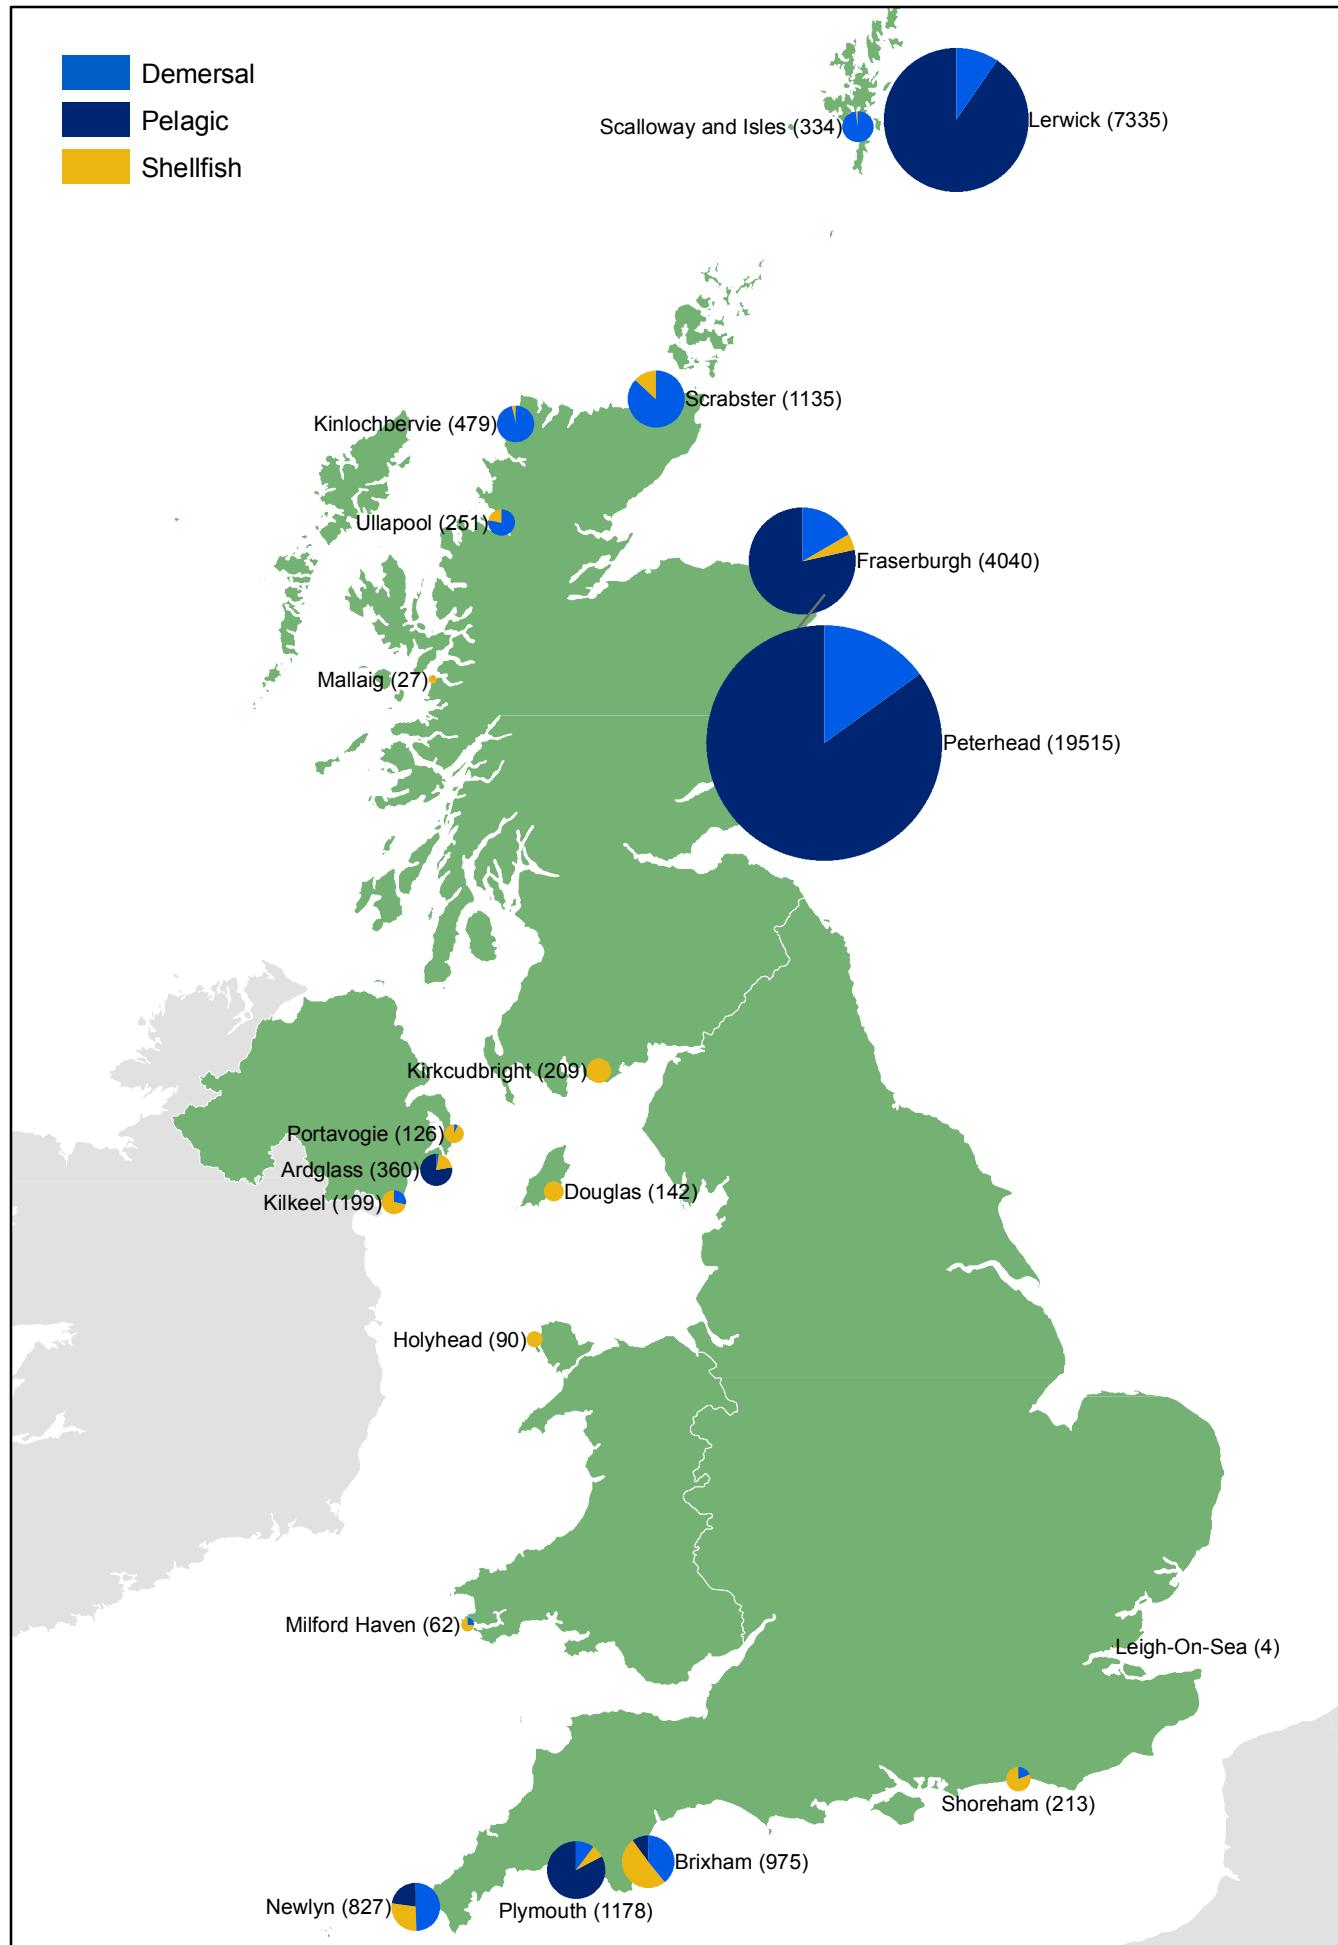

<https://www.gov.uk/government/collections/uk-sea-fisheries-annual-statistics>

7. Landings by foreign vessels into the UK do not include carrier landings. These are however included in our annual publication (see link above).
8. Details of the methodology can be found at  
<https://www.gov.uk/government/collections/monthly-uk-sea-fisheries-statistics#methodology>
9. Data are based on landings data to date which have been fully validated. The summary tables include a year on year comparison of cumulative landings up to and including the latest month. However, the later year's figures will be less complete due to delays in getting all landings data onto the system, and this will have an effect on the percentage change figures shown. Whilst the size of this effect varies by species, a rough guide is that at the total levels, the percentage change shown could be out by up to 5 percentage points, based on analysis of the Monthly Returns published throughout 2013.
10. The following symbols apply throughout:
  - means "nil"
  - .. means "negligible" (less than half the last digit shown)
  - na means "not applicable"
