Annex F

United Kingdom oil and gas resources

Introduction

- F.1 This section provides background information on the United Kingdom's crude oil, natural gas liquids and natural gas production, disposal and operations. This information is intended as a supplement to that in the commodity balances included in Chapter 3. Most of the data (including those on gas) are obtained from the Department of Energy and Climate Change's Petroleum Production Reporting System (PPRS).Further information can be obtained from DECC's oil and gas website at www.gov.uk/search?q=oil+and+gas#detailed-results.
- F.2 The annual statistics relate to calendar years, or the ends of calendar years, and the data cover the United Kingdom Continental Shelf [UKCS] (both onshore and offshore). Annual data for production, imports and exports of crude oil during the period 1970 to 2013 are given in Chapter 3, long term trends, Table 3.1.1 (www.gov.uk/government/statistics/petroleum-chapter-3-digest-of-united-kingdom-energy-statistics-dukes). The equivalent for natural gas production is Chapter 4, long term trends, Table 4.1.1 (www.gov.uk/government/statistics/natural-gas-chapter-4-digest-of-united-kingdom-energy-statistics-dukes).

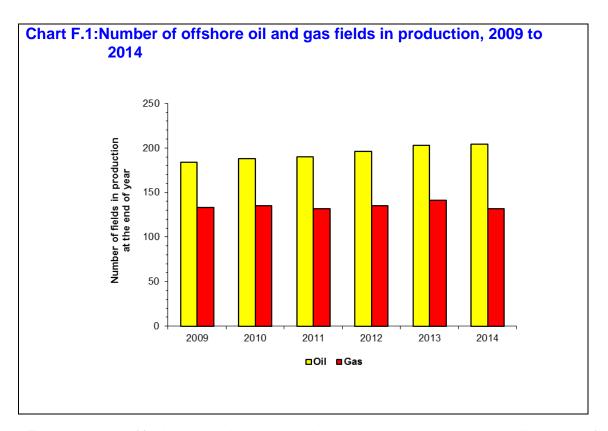

Oil and gas reserves

F.3 Information on oil and gas reserves can be found on DECC's oil and gas website in the statistics section at www.gov.uk/oil-and-gas-uk-field-data#uk-oil-and-gas-reserves-and-resources.

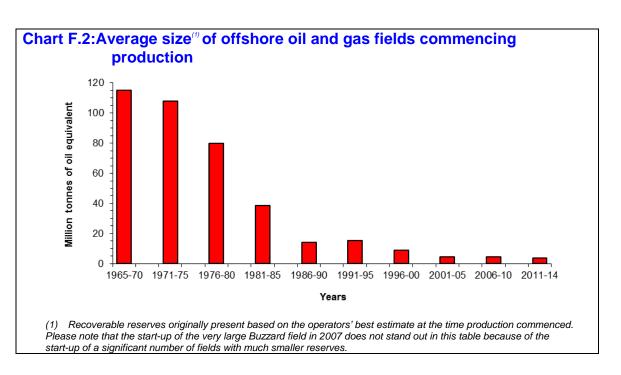

Offshore oil and gas fields and associated facilities

F.4 Table F.A below shows that the number of offshore oil fields in production or under development rose from 190 at the end of 2009 to 234 at the end of 2014. For offshore gas fields the equivalent change between the end of 2009 and 2014 was from 141 to 132 with a few older gas fields closing and not many being added into production. Most oil fields also produce gas: these are not double-counted. The changes in the number of fields in production are shown in Chart F.1 (offshore fields in production). Throughout the period since 2009 there have been 5 onshore oil terminals. In 2007 there were 5 onshore associated sub-gas terminals and 9 other (dry) sub-gas terminals. However, during 2010 the three (dry) sub terminals at Easington were combined into a single terminal. In 2011 two (dry) sub-gas terminals at Bacton were combined into a single sub-gas terminal. While there are significant numbers of oil and gas fields onshore, total onshore production is less than 2 per cent of the UK total.

| Table F.A: Offshore oil and gas fields and facilities | | | | | | | | | | | | | | |
|---|------|------|------|------|------|------|--|--|--|--|--|--|--|--|
| _ | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | | | | | | | | |
| Offshore oil fields in production | 184 | 188 | 190 | 196 | 203 | 204 | | | | | | | | |
| Offshore oil fields under development | 6 | 10 | 14 | 23 | 25 | 30 | | | | | | | | |
| Offshore gas fields in production | 133 | 135 | 132 | 135 | 141 | 132 | | | | | | | | |
| Offshore gas fields under development | 4 | 2 | 5 | 8 | 3 | 2 | | | | | | | | |

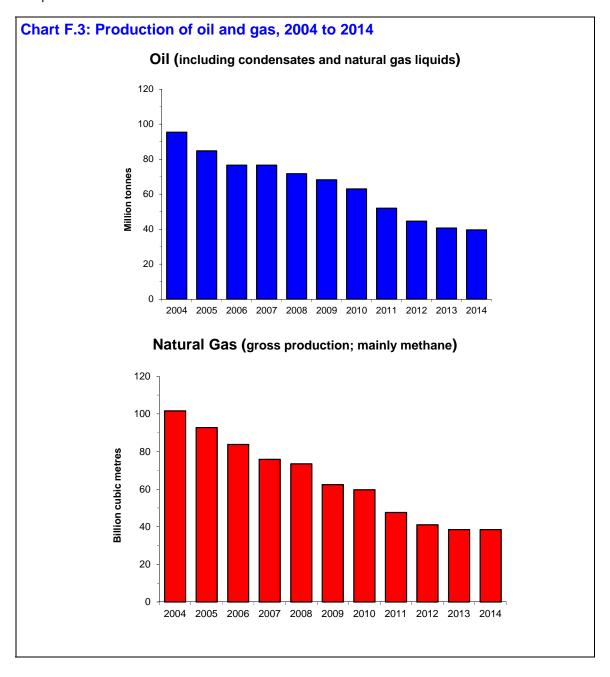

The average size of fields commencing production in the years 2011 to 2014 was 3.8 million tonnes of oil equivalent (see Chart F.2). The general fall in average field size reflects a decline in the size of fields discovered compared with the early period of the development of the North Sea and the effect of improved technology providing cost-effective means of extracting oil and gas from smaller fields and hitherto unpromising locations. The industry continues to face a range of challenges in order to realise fully the North Sea's potential. Alongside other initiatives, government and industry are tackling these challenges via the joint Government and Industry task force, PILOT.

Production of oil and gas (Tables F.1, F.2 and F.3)

F.6 These tables show production of crude oil, natural gas (mainly methane) and natural gas liquids. Before 2001, oil and gas production were reported based on field level data on well-head production, but aggregate figures are now based on terminal receipts following the introduction in January 2001 of a simplified Petroleum Production Reporting System and subsequent in-house changes to the data collection system. These new data are more accurate measures of production because the oil that leaves a terminal has been stabilised (that is any water, natural gas liquids or other organic compounds have been removed from the crude oil). Gross gas production includes gas used at terminals but excludes any flaring or venting at the terminals (not available before 2001). Except for associated gas fields, field level data can still be found at DECC's oil and gas website at: www.gov.uk/oil-and-gas-uk-field-data.

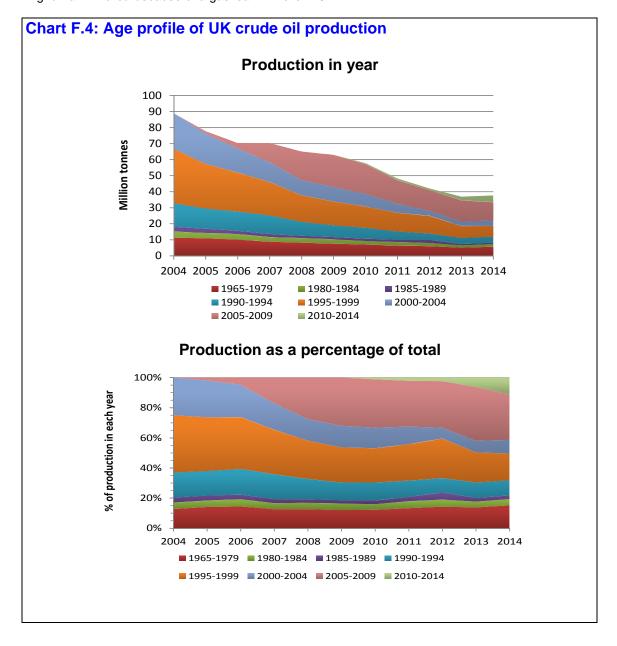

F.7 Chart F.3 shows the trend in total oil production from 2003 to 2014. After reaching a record level of 137 million tonnes in 1999, production has generally declined each year to 39.5 million tonnes in 2014, 29 per cent of the peak level. Gross natural gas production (mainly methane) peaked in 2000 at 115 billion cubic metres but has declined to around 38 billion cubic metres in 2014, 33 per cent of the peak level.

Production of crude oil

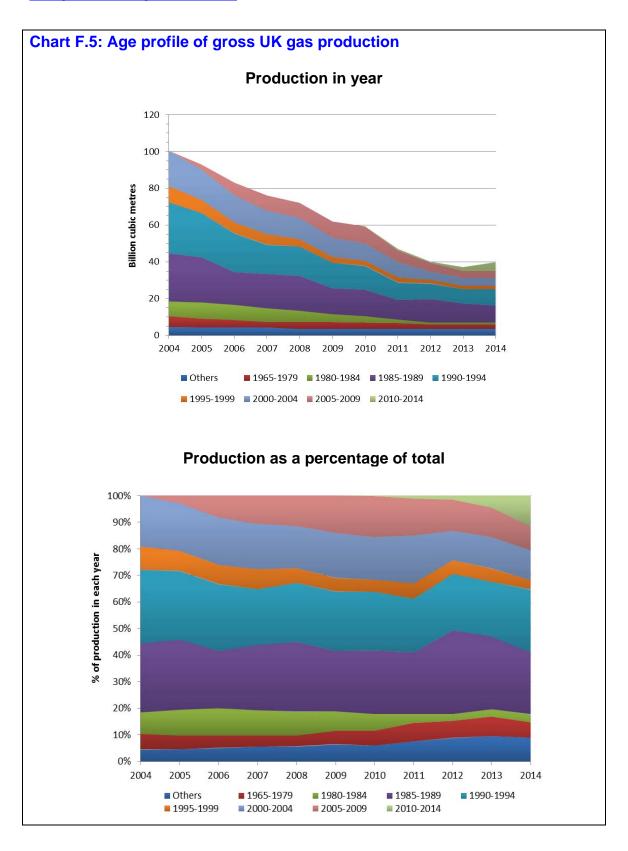

F.8 Production from established oil fields has been dropping in recent years. This is illustrated in Chart F.4 below, where oil production in each year from 2003 to 2014 is broken down by the age group of the fields in production during that year. Two charts are shown, the first with the actual amounts of crude oil produced during the year for each age group and the second with the same data transformed to show what percentage of total production each year comes from each field age group. The data used to produce these charts can be found on DECC's oil and gas website at www.gov.uk/oil-and-gas-uk-field-data.

F.9 It can be seen from the production chart that during the 2000s the amount of oil produced from older established fields was in general decline. It is also noticeable that the decline for 1995-1999 as well as 2000-2004 developments is greater than for earlier developments. This is because later technology meant crude oil could be extracted at a relatively greater rate leading to a quicker exhaustion of the reserves. Production for fields starting up between 2005-2009 still seem to be quite good and as expected production between 2010 to 2014 is on the incline. In 2014, these newer (post 1994) fields accounted for 68 per cent of the UK's oil production. The charts also clearly reflect the start up and prolonged plateau of the very large Buzzard field at the beginning of 2007 and, for fields that commenced production in the period 2000 to 2004, the suspension of production from the Elgin/Franklin area because of a gas leak in March 2012.

Production of gas

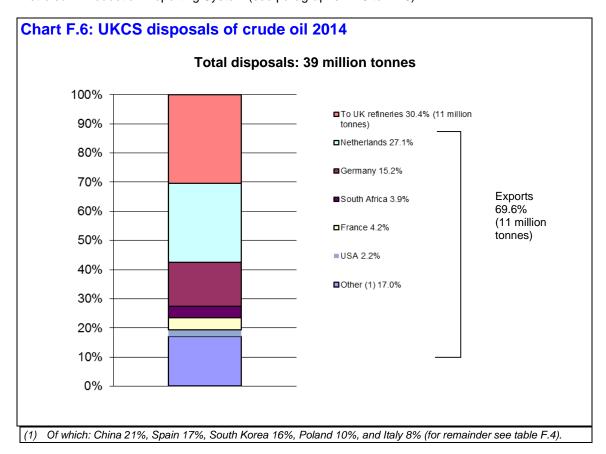

F.10 The charts below present gross gas production reported at field/system level and include gas used for drilling, production and pumping operations, but exclude gas flared, vented and re-injected. The data used to produce these charts can be found on DECC's oil and gas website at www.gov.uk/oil-and-gas-uk-field-data.

F.11 Gross gas production reached a peak in 2000. Since then production has fallen to 33 per cent of peak production with a slight rise in production in 2014 (Chart F.5). As mentioned above (in paragraph F.8) for older oil fields, production from the older gas fields that were discovered in the Southern North Sea has reduced in recent years as the reserves originally present in the fields become depleted. Chart F.5 illustrates this. The apparent extent of the decline in gas production from older fields is not as significant as that shown for oil fields (Chart F.4). This is partly because most associated gas production is not back allocated to individual fields and, therefore, the associated gas is based on terminal start date rather than field start date. However, it should be noted, as mentioned above (in paragraph F.9), for fields than commenced production in 2000 to 2004, the impact of the suspension of production from the Elgin/Franklin area in March 2012 because of a gas leak is clearly reflected.

Disposals of crude oil (Table F.4)

F.12 Table F.4 and Chart F.6 show the destination of crude oil split between amounts to UK refineries and exports (see technical notes, paragraphs F.14 to F.21) by country of destination (from which it may be transhipped elsewhere). The figures are obtained from returns made to the Department of Energy and Climate Change by operators of oil fields and onshore terminals under the Petroleum Production Reporting System (see paragraphs F.16 to F.18).

F.13 The exports figures in Table F.4 may differ from those compiled by the United Kingdom Petroleum Industry Association (UKPIA) and published in Chapter 3.UKPIA figures also include reexports. These are products that have been imported into the UK and stored before being exported from the UK, and were never part of UK production.

Technical notes and definitions

Petroleum Production Reporting System

F.14 Licensees operating on the UK Continental Shelf are required to make monthly returns on their production of hydrocarbons to the Department of Energy and Climate Change (DECC). DECC compiles this information in the Petroleum Production Reporting System (PPRS). The PPRS is used to report flows, stocks and uses of hydrocarbon from the well-head through to final disposals from a pipeline or terminal and is the major source of the information presented in this chapter.

- F.15 Returns are collected covering field and terminal data compiled by relevant reporting units. Each type of return is provided by a single operator, but usually covers the production of a number of companies, since frequently operations carried out on the Continental Shelf involve several companies working together in joint ventures.
- F.16 Every production system has one or more sets of certified meters to measure oil, gas or condensate production. The flows measured by the meters are used to check the consistency of returns and are therefore used to assure the accuracy of the PPRS.

Exports

- F.17 The term exports used in Table F.4 refers to figures recorded by producers of oil and gas for their exports. These figures may differ from the figures for exports compiled by HM Revenue and Customs (HMRC) and given in Annex G. In addition, HMRC now differentiate between EU and non-EU trade by using the term dispatches for trade going to other EU countries, with exports retained for trade going to non-EU countries. The differences can occur between results from the two sources of information because, whilst the trader's figures are a record of actual shipments in the period, for non-EU trade HMRC figures show the trade as declared by exporters on documents received during the period stated.
- F.18 In addition, trade in oil frequently involves a "string" of transactions, which can result in the actual destination of the exports changing several times even after the goods have been dispatched. As such, differences can arise between the final country of destination of the exports as recorded by the producers themselves and in the HMRC figures. The HMRC figures also include re-exports. These are products that might originally have been imported into the UK and stored before being exported back out of the UK, as opposed to actually having been produced in the UK.
- F.19 In editions of the Digest before 1997, these exports were called "shipments" in an attempt to highlight their difference from the other sources of trade data.

Units of measurement for gas

F.20 The basic unit of measurement for quantities of flows and stocks is volume in cubic metres at a temperature of 15°C and a pressure of 1.01325 bar.

Monthly and Quarterly data

F.21 Monthly and quarterly data on the production of crude oil and natural gas from the UKCS, along with details of imports and exports of oil, oil products and gas, are available. This information can be obtained free of charge by following the links given at the Energy Statistics section of the DECC website at:

www.gov.uk/government/organisations/department-of-energy-climate-change/about/statistics.

⁽¹⁾ Production from: Alba, Angus, Ardmore, Balloch, Banff, Benyl, Bittern, Blackbird, Blake, Boa (UK), Buckland, Captain, Chestnut, Clapham, Cook, Curlew, C, Don South West (from April 2009 to February 2010 see footnote (7)), Donan (Maersk), Douglas, Douglas West, Ettrick, Fergus, Fife, Flora, Foinaven, Gryphon, Guillemot A, NW and W, Harding, Huntington, Kyle, Leadon, Lennox, Lochranza, Loirston, Macture, Ness, Nevis, Pict, Pierce, Ross, Saxon, Shelley, Skene, Statiford (UK), Teal, Teal South, Tullich, West Don (from June 2009 to February 2010 - see footnote (7)).

⁽²⁾ Production from: Chanter, Claymore, Duart, Galley, Hamish, Highlander, Iona, Ivanhoe, MacCulloch, Petronella, Piper, Renee, Rob Roy, Rubie, Saltire, Scapa, Tartan, Tweedsmuir, Tweedsmuir South.

⁽³⁾ Production from: Foinaven. The Flotta contract to process Foinaven crude expired in 2008. Direct disposals from Foinaven are included in the offshore loaded figure.

⁽⁴⁾ Production from: Andrew, Arbroath, Arkwright, Bacchus, Balmoral, Bardolino, Beauly, Beinn, Birch, Brae Area, Braemar, Brechin, Brenda, Brimmond, Britannia, Brodgar, Bruce, Buchan, Burghley, Buzzard, Caledonia, Callanish, Causeway, Cyrus, Drake, Egret, Elgin, Enock (UK), Erskine, Everest, Farragon, Fleming, Forties, Franklin, Gadwall, Glamis, Glenelg, Goosander, Grouse, Hannay, Hawkins, Heron, Howe, Keith, Kingfisher, Kittiwake, Larch, Lomond, Machar, Madoes, Mallard, Maria, Marnock, Maule, Merganser, Miller, Mirren, Monan, Montrose, Mungo, Nelson, Nicol, Rhum, Rochelle, Scoter, Scott, Seymour, Shearwater, Skua, Starling, Stirling, Sycamore, Tellord, Thelma, Tiffany, Toni, Tonto, Wood.

⁽⁵⁾ Production from: Athena, Beatrice, Jacky, Lybster.

⁽⁶⁾ Production from: Affleck, Auk, Auk North, Blane (UK), Clyde, Fulmar, Gannet A-G, Halley, Jade, James, Janice, Jasmine, Joanne, Judy, Leven, Medwin, Nethan, Orion.

⁽⁷⁾ Production from: Alwyn North, Brent, Broom, Causeway, Claire, Columba B/D, Columba E, Conrie, Cormorant (East, North and South), Deveron, Don, Don South West (from March 2010 - see footnote (1)) from Dunbar, Dunlin, Dunlin South West, Eider, Ellon, Falcon, Fionn, Forvie, Grant, Heather, Hudson, Hutton NW, Islay, Jura, Kestrel, Loyal, Lyell, Magnus, Magnus South, Merlin, Murchison (UK), Ninian, Osprey, Otter, Pelican, Penguin, Playfair, Schiehallion, Strathspey, Tem, Thistle, West Don (from March 2010 - see footnote (1)).

⁽⁸⁾ Production from the Hamble and Holybourne terminals, plus other onshore oil fields.

⁽⁹⁾ Extended well tests other than from established fields.

⁽¹⁾ Production from: Flotta, Forties, Nigg, Norpipe, Sullom Voe. (2) Production from: Bacton SEAL Shell, CATS, FLAGS, Frigg (UK), SAGE.

⁽³⁾ Production from: Bacton Perenco, Tullow, Shell, Dimlington, Easington,

Barrow, Point Of Ayr, Theddlethorpe. Includes exports from fields that export gas directly to the Netherlands using the Dutch offshore pipeline system.

⁽⁴⁾ Production from: Hamble, Holybourne, Knapton, Wytch Farm.

⁽¹⁾ Monthly data for aggregate disposals to refineries and exports are available - See paragraph F.21.

⁽²⁾ Some of the exports to the Caribbean area may have been for transhipment to the USA.

⁽³⁾ Exports to the Netherlands include oil for transhipment or in transit to other destinations (e.g. Belgium and Germany).

⁽⁴⁾ Includes disposals of onshore production. The difference between disposals and production as shown in

Table F.2 is accounted for by platform and other field stock changes and by terminal and transit stock changes.
