Pesticide Residues in Food**

*Radish*

**Pesticide Residues Monitoring Report 2015**

## This is an amalgamation of the quarterly reports

### Introduction

We last surveyed radishes in 2009. The survey included any type of radish or mooli. Mooli has previously been tested as part of the speciality vegetable survey.

We sampled and reported on radishes in quarters two and four of 2015.

A market research company bought the radish samples from retail outlets across the UK.

### Conclusions

#### Summary statement

None of the residues detected by the laboratory would be expected to have an effect on health.

### Results

<b>When samples were taken</b>	Between April and September 2015
<b>Number of samples</b>	54 samples were tested for up to 283 pesticide residues
<b>Origin of samples</b>	38 samples came from the UK 1 sample was imported from outside the EU 15 samples came from the EU
<b>Residues found</b>	25 samples contained no residues from those sought 29 samples contained residues above the reporting level None of the samples contained residues above the MRL None of the samples were labelled as organic.
<b>Multiple residues</b>	2 samples contained residues of more than one pesticide <ul style="list-style-type: none"><li>• 2 samples contained 2 residues</li></ul>

### Risk assessments

<b>Number of risk assessments</b>	The laboratory detected 2 different pesticide residues. Following the Chemicals Regulation Directorate (CRD)'s risk assessment, we do not expect these residues to have an effect on health.
<b>Combined risk assessments</b>	<p>One sample contained residues of more than one pesticide. When samples contain more than one pesticide belonging to the groups that CRD usually assess, where toxicologists expect these to add to each other's effect (have the same toxicological mode of action), CRD carry out a risk assessment of the combined residues.</p> <p>In this case CRD did not carry out a risk assessment of combined residues because the laboratory did not find residues belonging to these groups with similar toxicological modes of action in any samples.</p>

 propamocarb the Netherlands (8), UK (12)

No residues were found in 17 of the 38 UK samples

No residues were found in any of the Imported (Non-EC) samples

No residues were found in 7 of the 15 Imported (EC) samples
