

ANTIBIOTIC RESISTANCE - TIME FOR CHANGE

What can you do to help?

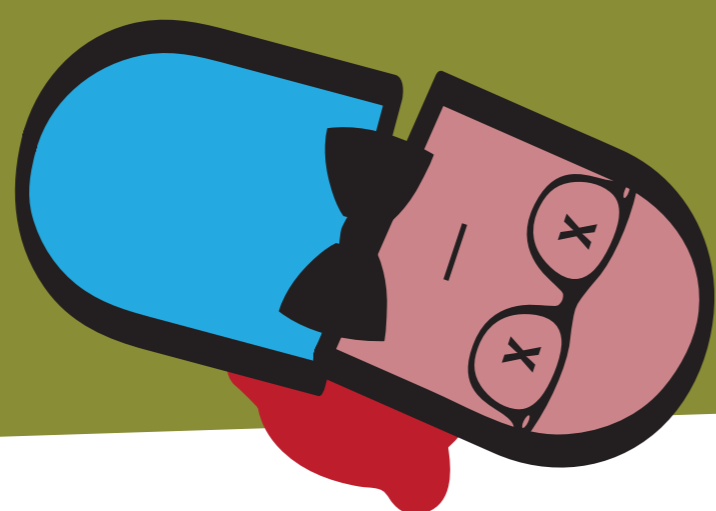

Reserve Critically Important Antibiotics* for treatment of bacteria not responding to other classes
(*fluoroquinolones & cephalosporins)

Find the perfect match for a short-term relationship by performing culture & sensitivity testing

Report all antibiotic treatment failures to the Marketing Authorisation Holder or the VMD

Target bacteria with as narrow spectrum antibiotics as possible

Stop and think when prescribing before the options run out

Don't chance getting the wrong 'drug to species and target bug' combination
