Pesticide Residues in Food**

*Peppers*

**Pesticide Residues Monitoring Report 2015**

## This is an amalgamation of the quarterly reports

### Introduction

We have surveyed peppers every year since 2006 due to a high non-compliance rate. This year peppers are being monitored across the EU as part of the EU co-ordinated multi-annual control programme.

The survey included sweet peppers, bell peppers and capsicum. It didn't include chilli peppers.

We sampled and reported peppers in every quarter of 2015.

The Rural Payment Agency's Horticultural Marketing Inspectors collected the pepper samples from a range of points in the supply chain (wholesale markets, retail depots, ports and import points).

### Conclusions

#### Summary statement

Based on the Chemicals Regulation Directorate's risk assessment of the residues detected we consider an effect on health to be unlikely.

#### DDAC (didecyldimethylammonium chloride)

DDAC was detected in 1 sample above the MRL of 0.1 mg/kg for all foods.

However, the position on these products has just been reviewed, 0.1 mg/kg is the new MRL that replaced the previous default MRL of 0.01\* mg/kg. The EU have temporarily allowed trade to continue in foods with residues up to a level of 0.5 mg/kg until August 2015. More information is available at page **Error! Bookmark not defined.**

### Results

<b>When samples were taken</b>	Between January and December 2015
<b>Number of samples</b>	72 samples were tested for up to 389 pesticide residues
<b>Origin of samples</b>	<u>Fresh</u> <ul style="list-style-type: none"><li>• 8 samples came from the UK</li><li>• 5 samples were imported from outside the EU</li><li>• 59 samples came from the EU</li></ul>
<b>Residues found</b>	29 samples contained no residues from those sought 43 samples contained residues above the reporting level 2 samples contained residues above the MRL 1 sample was labelled as organic. It didn't contain any residues from those sought
<b>Multiple residues</b>	22 samples contained residues of more than one pesticide <ul style="list-style-type: none"><li>• 13 samples contained 2 residues</li><li>• 5 samples contained 3 residues</li><li>• 3 samples contained 4 residues</li><li>• 1 sample contained 5 residues</li></ul>
<b>Residues measured above the MRL</b>	The laboratory detected 1 residue above the MRL in peppers <ul style="list-style-type: none"><li>• 1 sample from Poland contained a residue of ethephon at 5 mg/kg. The MRL is 0.05* mg/kg.</li></ul>
<b>Residues of BAC and DDAC measured above MRL (0.1 mg/kg) but below the temporary trading level (0.5 mg/kg)</b>	<ul style="list-style-type: none"><li>• 1 sample from Israel contained a residue of DDAC at 0.2 mg/kg. The MRL is 0.1 mg/kg.</li></ul>

\* **Maximum Residue Levels set at the LOD (LOD MRL):** These MRLs are set at a default level, i.e. at the limit of determination (LOD) as specified in EC Regulation 396/2005.

## Risk assessments

### Number of risk assessments

The laboratory detected 26 different pesticide residues. Following the Chemicals Regulation Directorate (CRD)'s risk assessment, we do not expect these residues to have an effect on health.

### Ethephon

1 sample contained ethephon at a level where we need to consider the effect on health in more detail. The highest level detected was 5 mg/kg

The intakes for 7-10 year-old children, toddlers, vegetarians, adults, 2-6 year-old children and 11-14 year-old children exceeded the ARfD. The highest intake was for 7-10 year-old children.

If 7-10 year-old children ate large portions of peppers containing ethephon at 5.0 mg/kg, their intake of ethephon could be 164% of the Acute Reference Dose. This intake is 73 times lower than a dose which caused no observed adverse effect in a 28 day oral dog study. The European Food Safety Authority used this study as the basis of the ARfD.

Toxicologists usually apply a factor of 100 to this dose to take into account uncertainties caused by using animal data and possible differences in susceptibility between people. However, in this case the factor was larger (120) to ensure consistency with the findings of human volunteer studies. We consider the reduced factor of 73 (from 120) still enough to make an effect on health unlikely.

### Combined risk assessments

Some samples contained residues of more than one pesticide. When samples contain more than one pesticide belonging to the groups that CRD usually assess, where toxicologists expect these to add to each other's effect (have the same toxicological mode of action), CRD carry out a risk assessment of the combined residues.

In this case CRD did not carry out any risk assessments of combined residues because the laboratory did not find residues belonging to these groups with similar toxicological modes of action in any samples.

## Follow up action

### Letters sent

The Secretariat wrote to the suppliers of the samples with residues above the MRL.

### Further investigation: suspected illegal use

We passed details of 1 sample from the UK that contained residues of chlorantraniliprole and methoxyfenozide which are not approved for use on peppers in the UK to CRD. CRD concluded that the pepper seedlings were produced in another EU country where they were treated legally.

### RASFFs issued

The EU issued a notification for the following samples through the EC's Rapid Alert System for Food and Feed (RASFF) (see glossary for more details)

- 1 sample from Poland containing ethephon at 5 mg/kg.

NOTE: \* Indicates MRL is set to the Limit of Determination.

Imported (EC) samples of peppers were from Belgium (1), Poland (2), Spain (32), the Netherlands (24).

Imported (Non-EC) samples of peppers were from Israel (5).

UK samples of peppers (8).

Residues were distributed by country of origin, as follows:

acetamiprid	Spain (1), the Netherlands (1)
azoxystrobin	the Netherlands (2)
boscalid	Spain (3), UK (1)
bupirimate	Spain (1)
chlorothalonil	Spain (5)
chlorantraniliprole	the Netherlands (2), UK (1)
cyprodinil	Spain (2)
DDAC (sum)	Israel (1)
ethephon	Poland (1)
flutriafol	Israel (3), Spain (15)
fludioxonil	Spain (5)
fenhexamid	Spain (1), the Netherlands (2)
indoxacarb	the Netherlands (1)
imidacloprid	Poland (1), Spain (1), the Netherlands (1)
