

17 October 2016

Year: 2016 Week: 41

In This Issue:

- Key messages.
- Diagnostic indicators at a glance.
- GP practices and denominator population.
- National syndromic indicators.
- Notes and further information.
- Appendix.

Key messages

Data to: 16 October 2016

During week 41 GP consultations for respiratory conditions including influenza-like illness, and upper and lower respiratory tract infections continued to increase, but remain within seasonally expected levels (figures 1, 2 and 5).

Consultations for vomiting increased during week 41, mainly in the under 5 years age group (figures 8 and 8a)

Diagnostic indicators at a glance:

Indicator	Trend	Level
Upper respiratory tract infection	increasing	similar to baseline levels
Influenza-like illness	increasing	similar to baseline levels
Pharyngitis	no trend	similar to baseline levels
Scarlet fever	no trend	similar to baseline levels
Lower respiratory tract infection	increasing	similar to baseline levels
Pneumonia	no trend	similar to baseline levels
Gastroenteritis	no trend	below baseline levels
Vomiting	increasing	below baseline levels
Diarrhoea	no trend	below baseline levels
Severe asthma	no trend	above baseline levels
Wheeze	no trend	above baseline levels
Conjunctivitis	no trend	below baseline levels
Mumps	no trend	similar to baseline levels
Measles	no trend	similar to baseline levels
Rubella	no trend	similar to baseline levels
Pertussis	increasing	above baseline levels
Chickenpox	no trend	below baseline levels
Herpes zoster	no trend	similar to baseline levels
Cellulitis	no trend	similar to baseline levels
Impetigo	no trend	similar to baseline levels

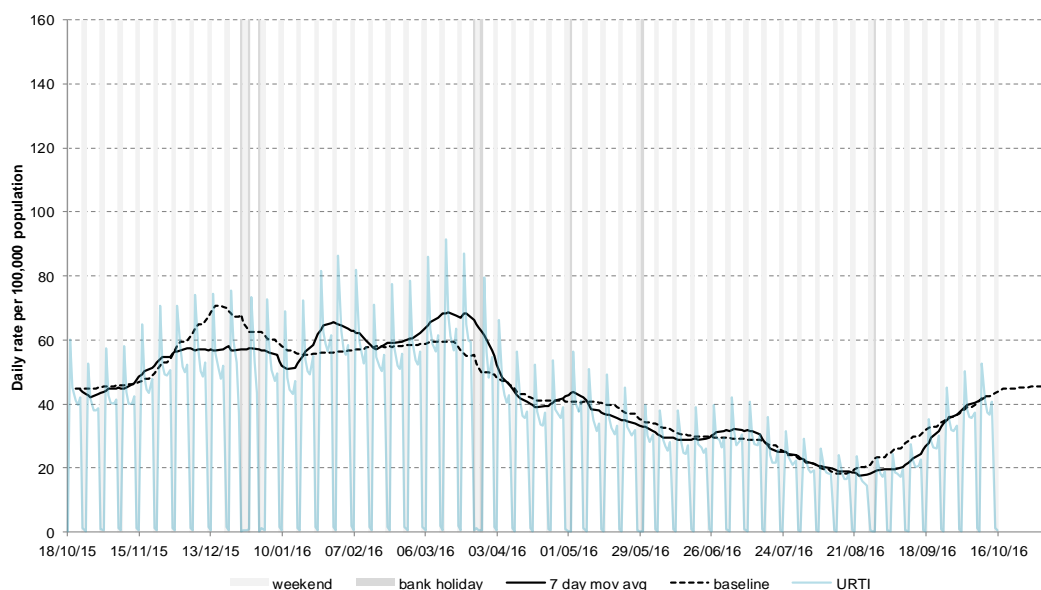

GP practices and denominator population:

Year	Week	GP Practices Reporting**	Population size**
2016	41	4,316	33.8 million

**based on the average number of practices and denominator population in the reporting working week.

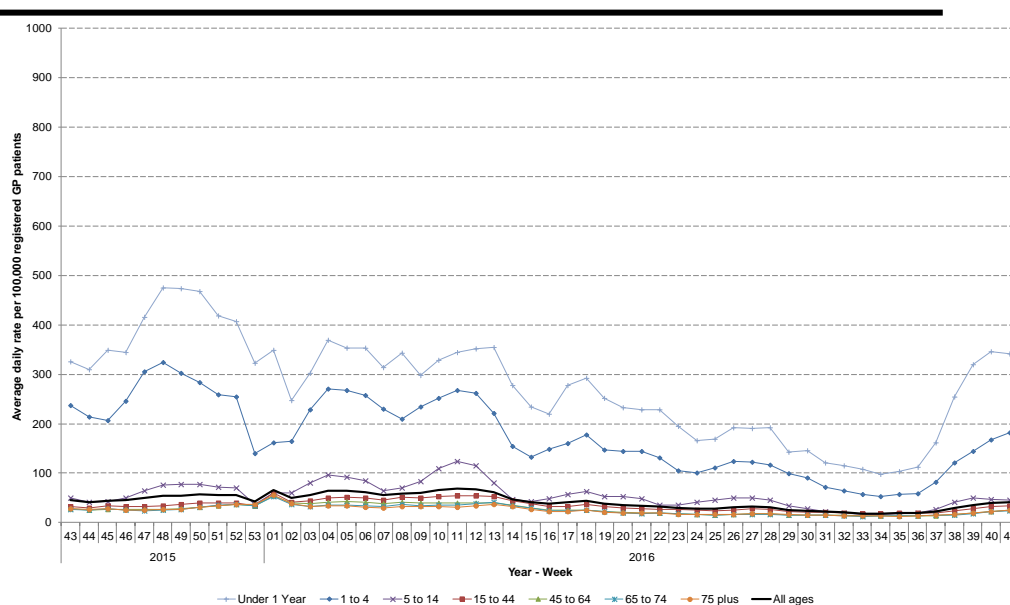

1: Upper respiratory tract infection (URTI)

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

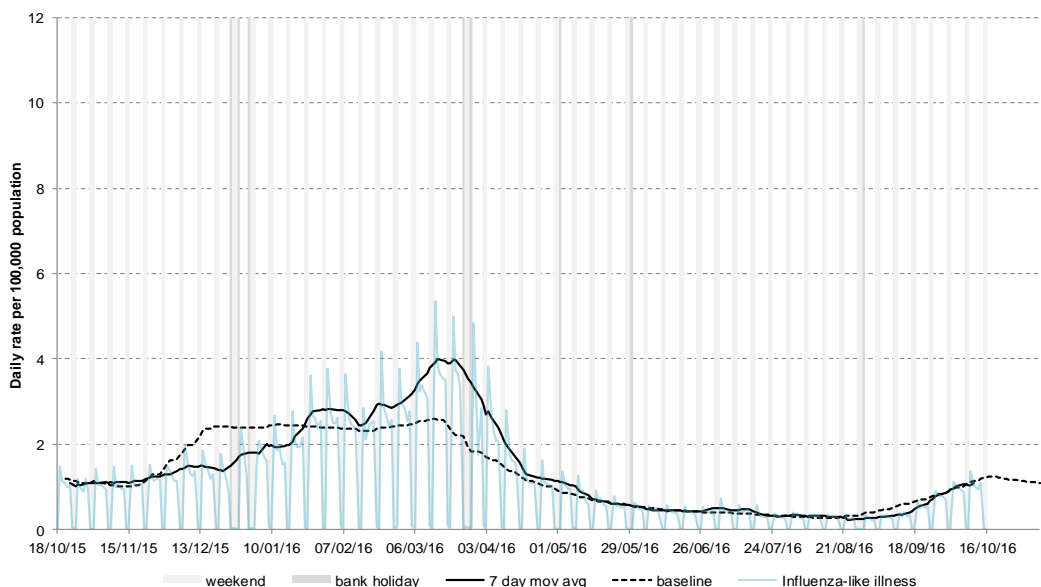

1a: Upper respiratory tract infection age

Average daily incidence rate by week per 100,000 population (all England) based on a population denominator of approximately 5.5 million patients).

2: Influenza-like illness (ILI)

Daily incidence rates (and 7-day moving average*) per 100,000 population (all England, all ages).

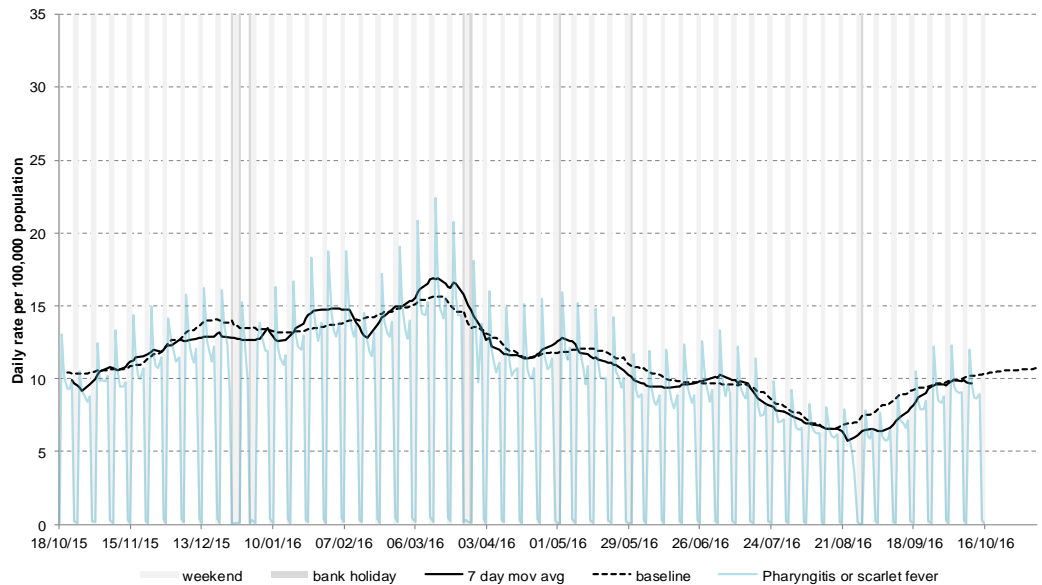

* 7-day moving average adjusted for bank holidays.

17 October 2016

Year: 2016 Week: 41

3: Pharyngitis or scarlet fever

Daily incidence rates (and 7-day moving average*) per 100,000 population (all England, all ages).

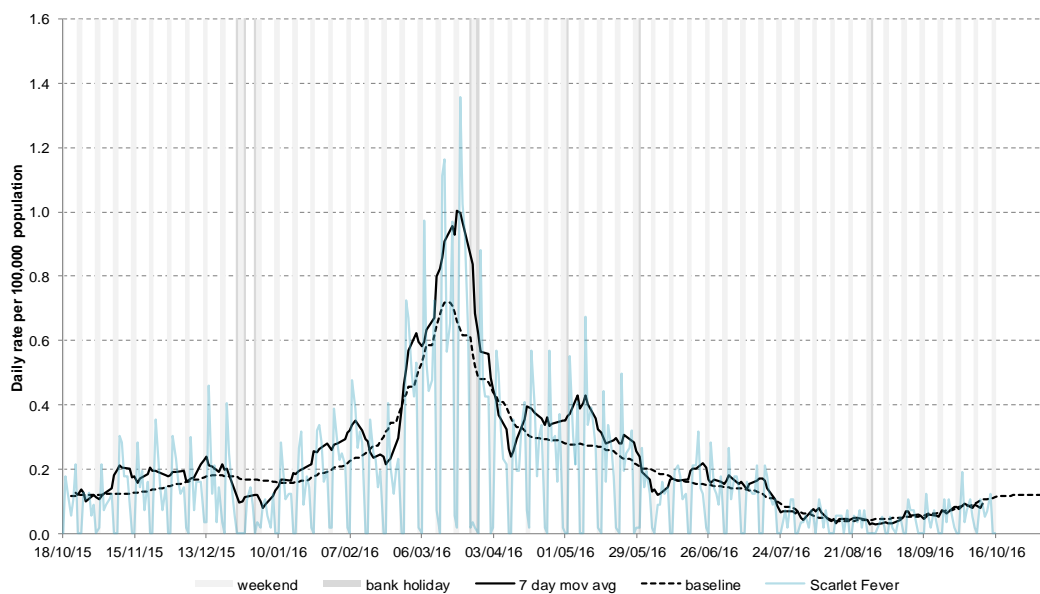

Intentionally left blank.

Intentionally left blank.

* 7-day moving average adjusted for bank holidays.

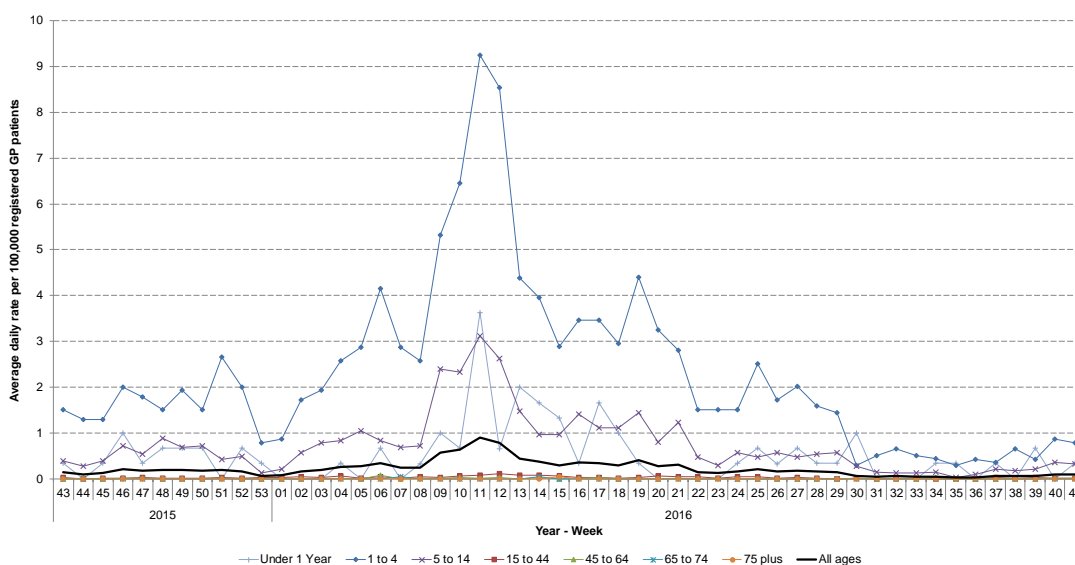

4: Scarlet fever

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, based on a population denominator of approximately 5.5 million patients).

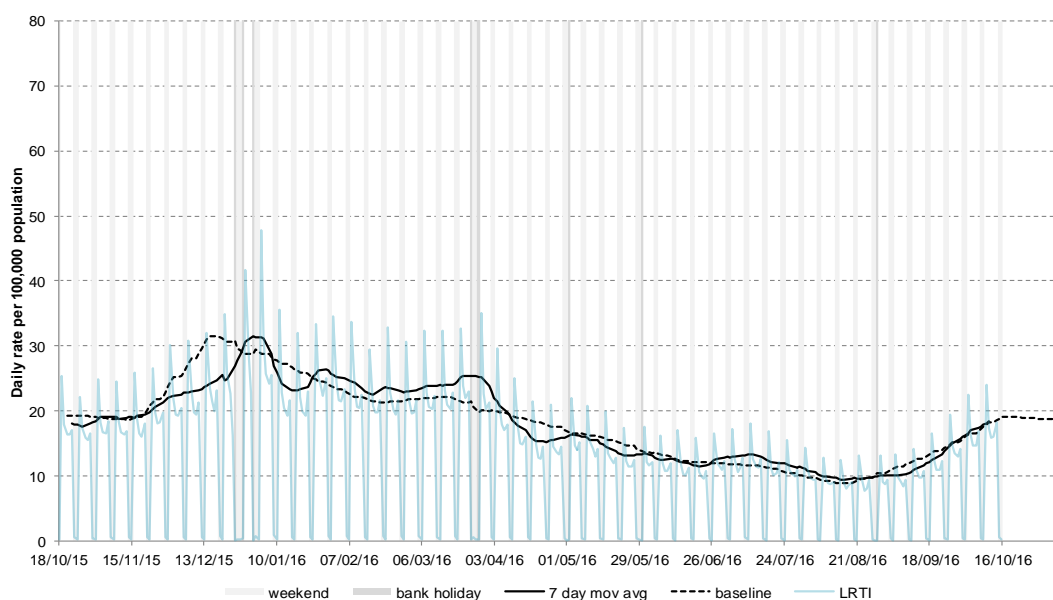

4a: Scarlet fever by age

Average daily incidence rate by week per 100,000 population (all England) based on a population denominator of approximately 5.5 million patients).

5: Lower respiratory tract infection (LRTI)

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

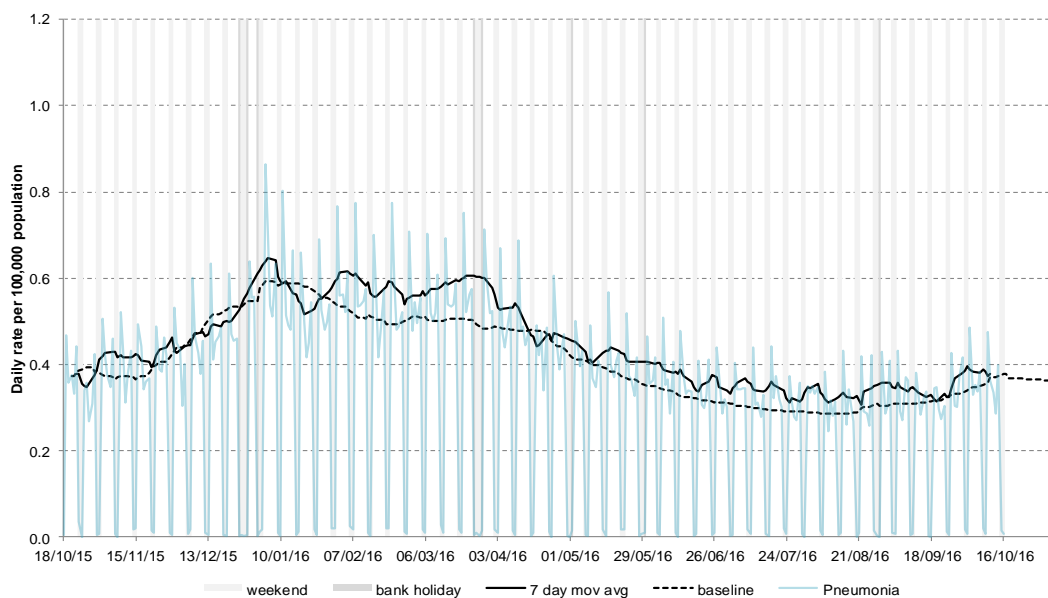

* 7-day moving average adjusted for bank holidays.

17 October 2016

Year: 2016 Week: 41

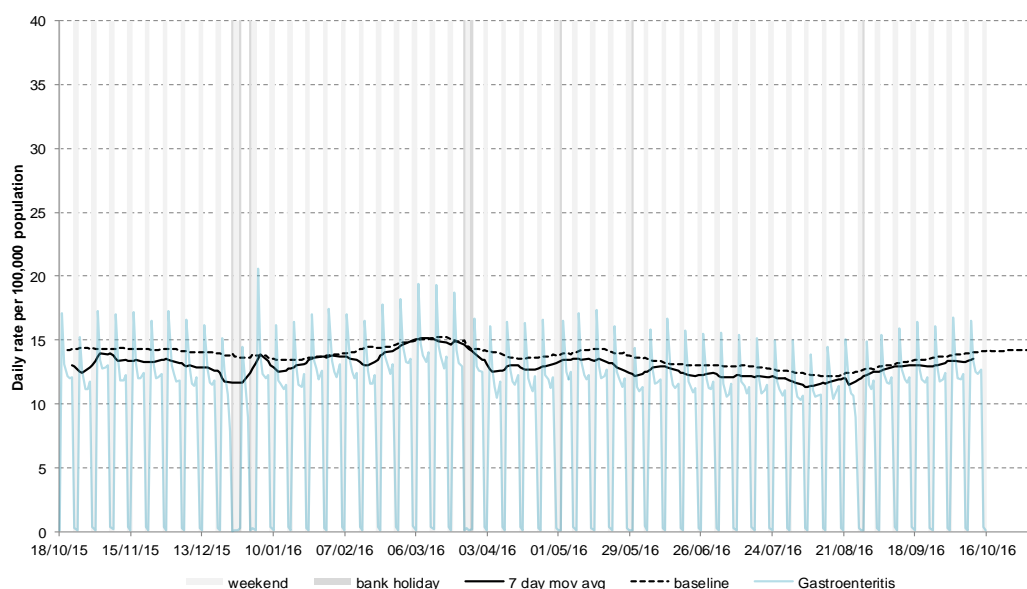

6: Pneumonia

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

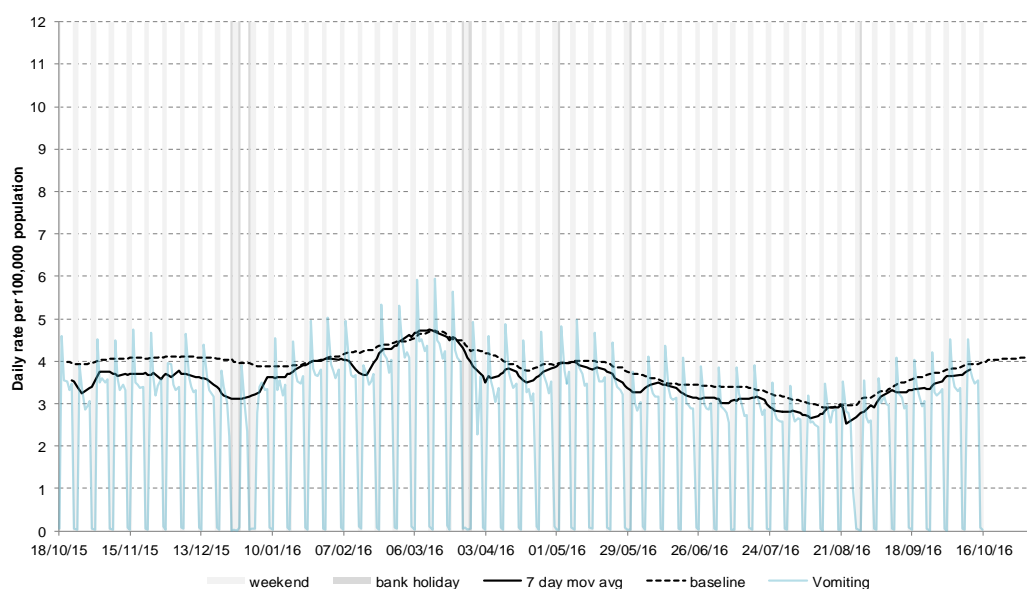

7: Gastroenteritis

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

8: Vomiting

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

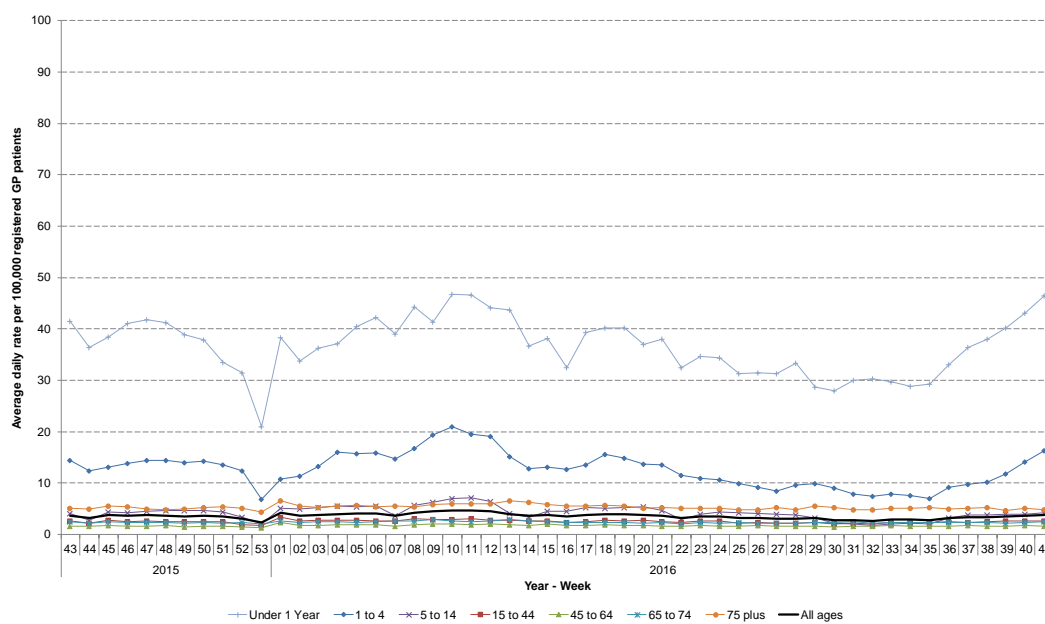

* 7-day moving average adjusted for bank holidays.

17 October 2016

Year: 2016 Week: 41

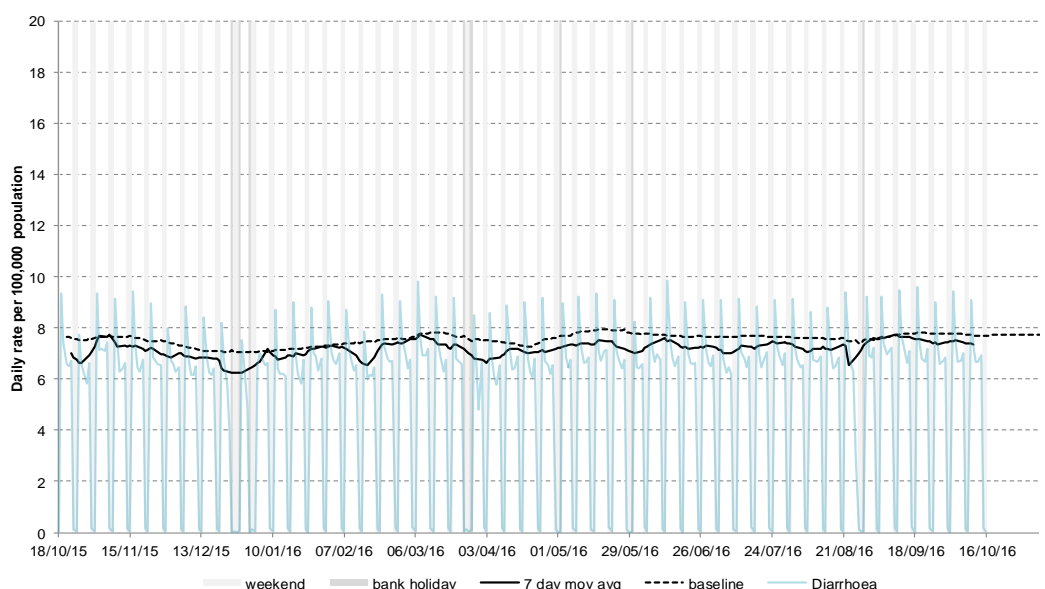

8a: Vomiting by age

Average daily incidence rate by week per 100,000 population (all England).

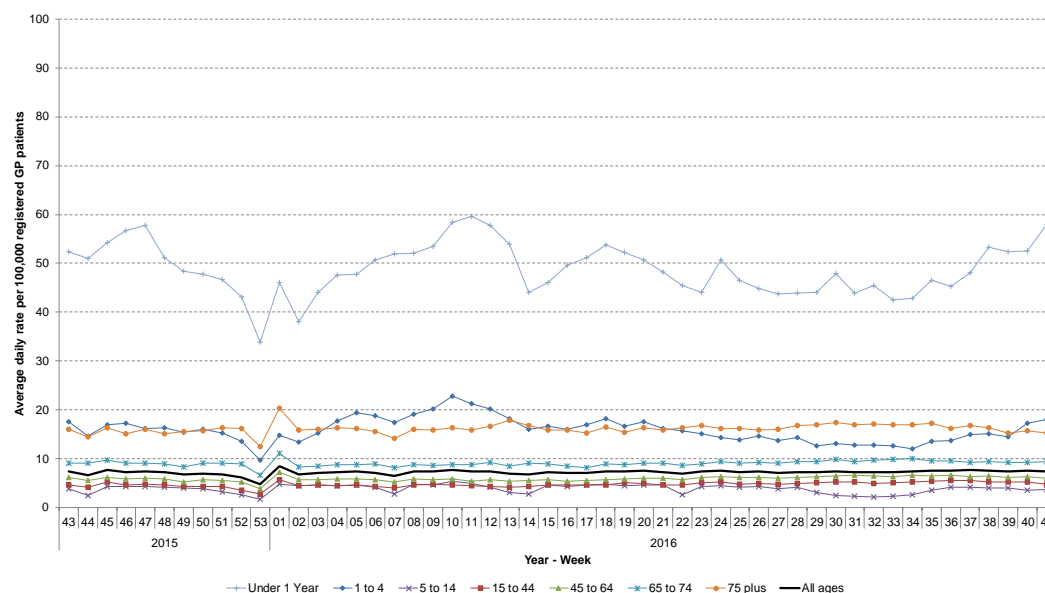

9: Diarrhoea

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

9a. Diarrhoea by age

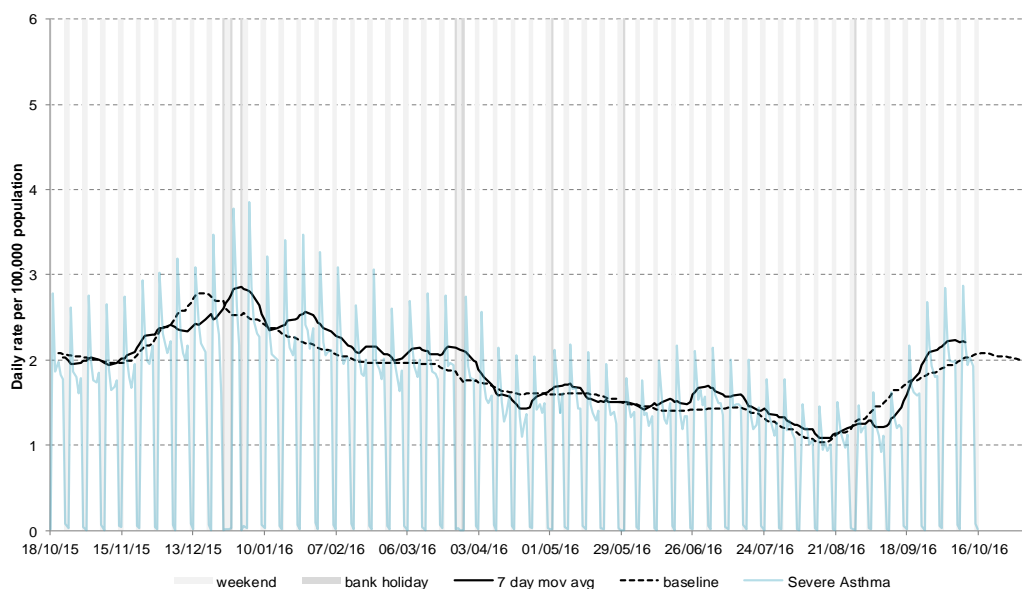

Average daily incidence rate by week per 100,000 population (all England).

* 7-day moving average adjusted for bank holidays.

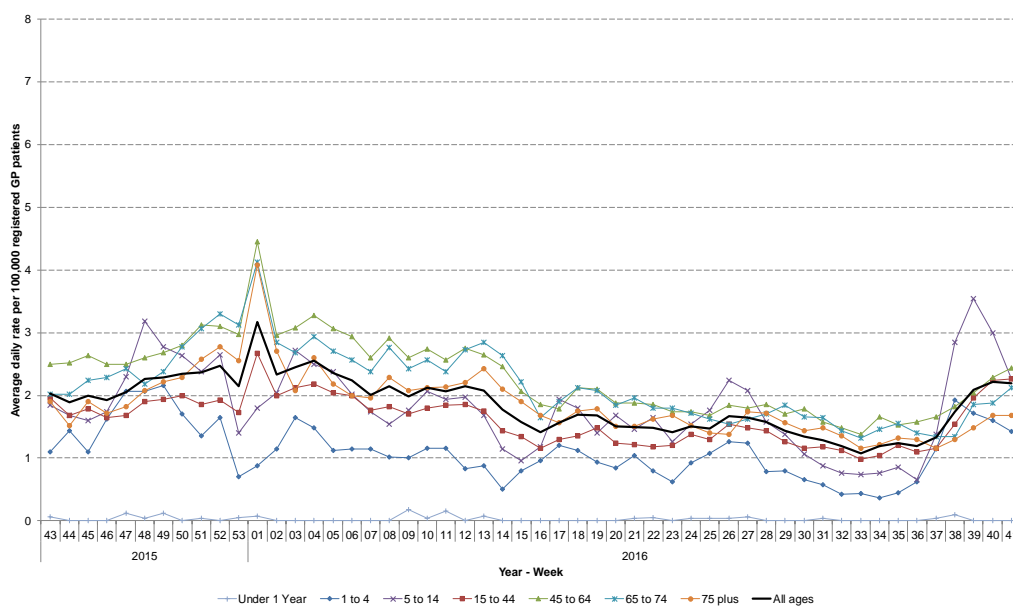

10: Severe asthma

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

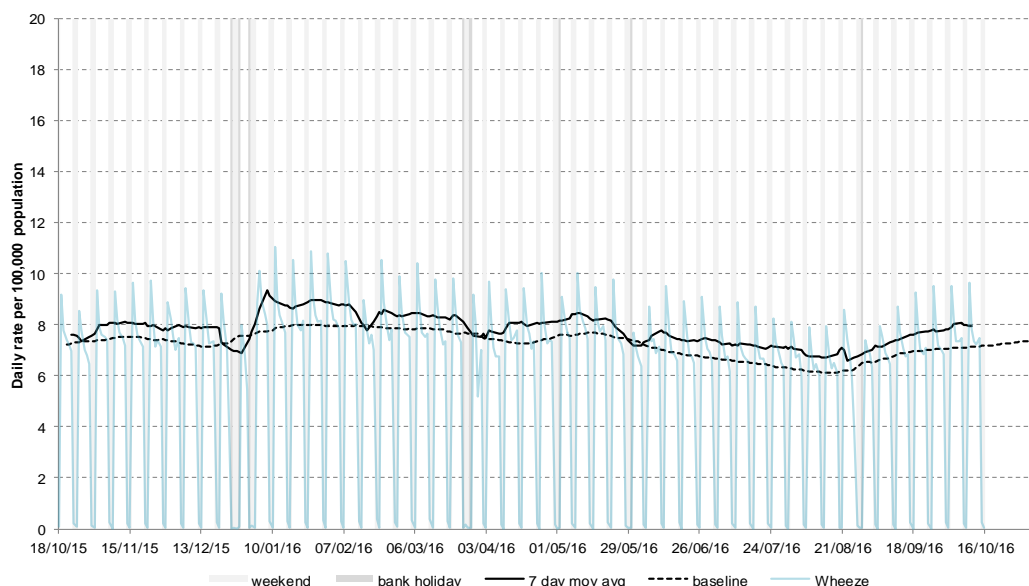

10a: Severe asthma by age

Average daily incidence rate by week per 100,000 population (all England).

11: Wheeze

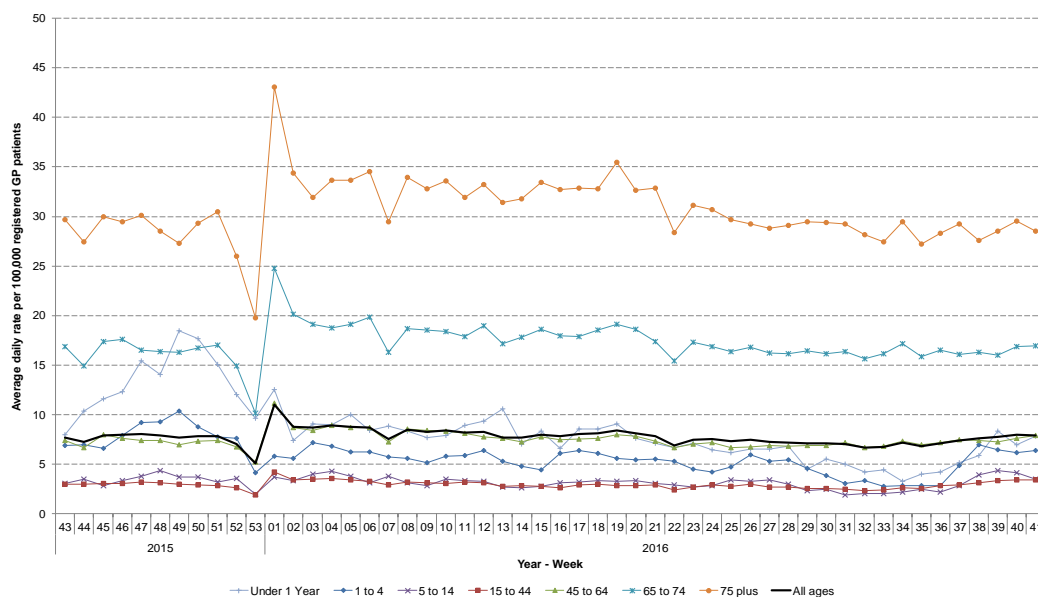

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

* 7-day moving average adjusted for bank holidays.

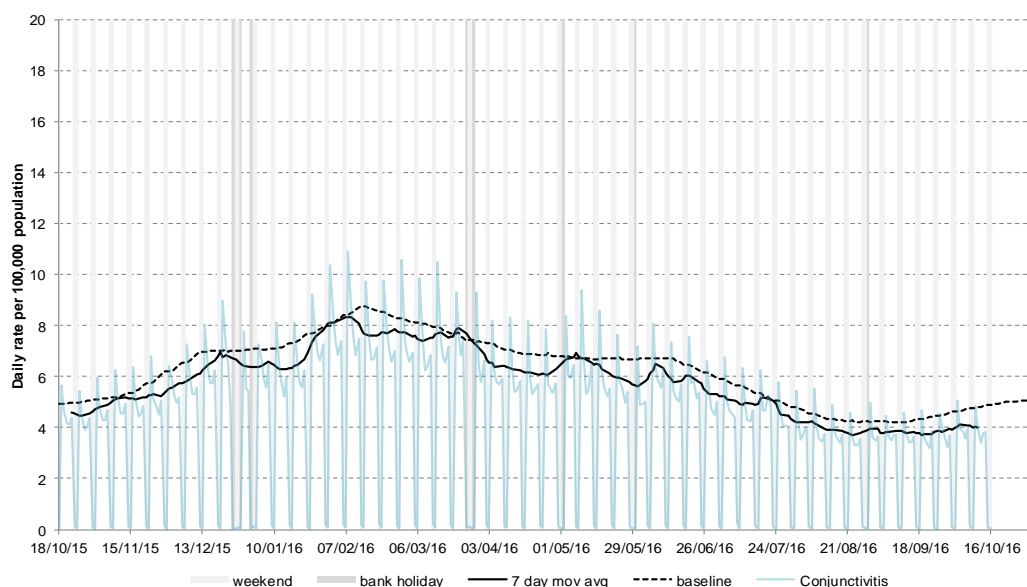

11a: Wheeze by age

Average daily incidence rate by week per 100,000 population (all England).

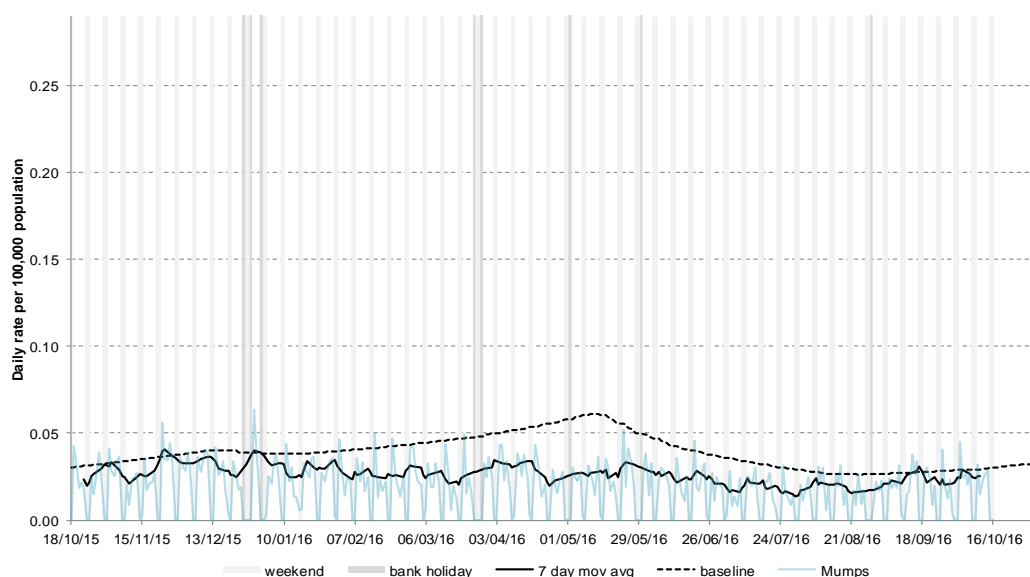

12: Conjunctivitis

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

13: Mumps

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

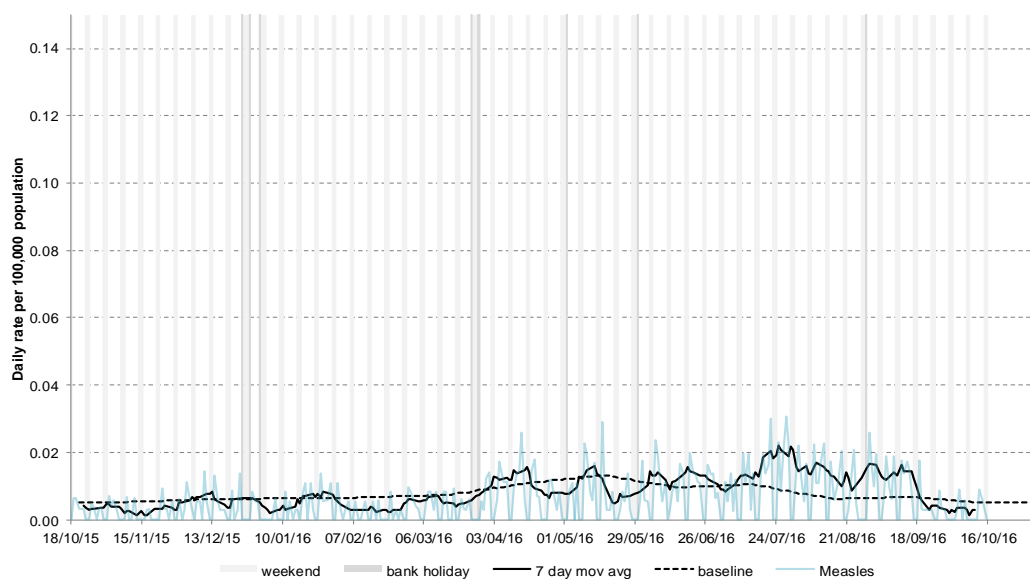

* 7-day moving average adjusted for bank holidays.

17 October 2016

Year: 2016 Week: 41

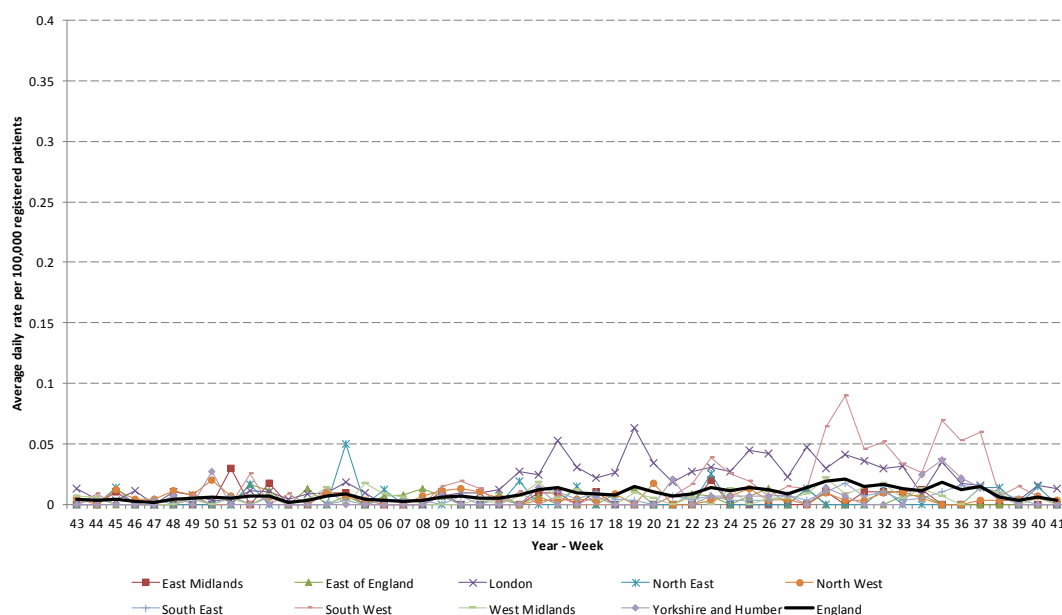

14: Measles

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

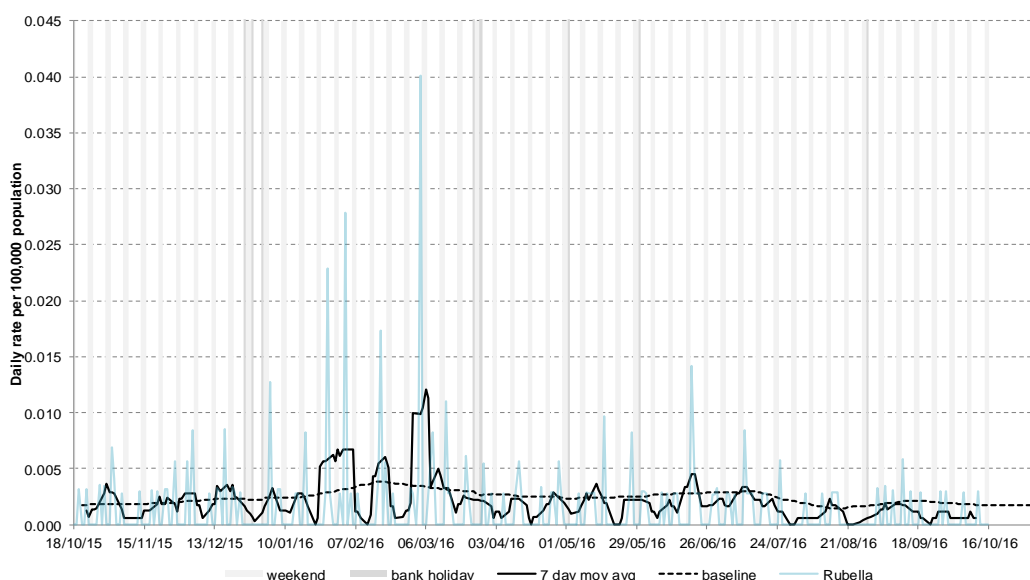

14a: Measles by PHE Centre

Average daily incidence rate by week per 100,000 population (using geographical boundaries of the 9 PHE centres).

15: Rubella

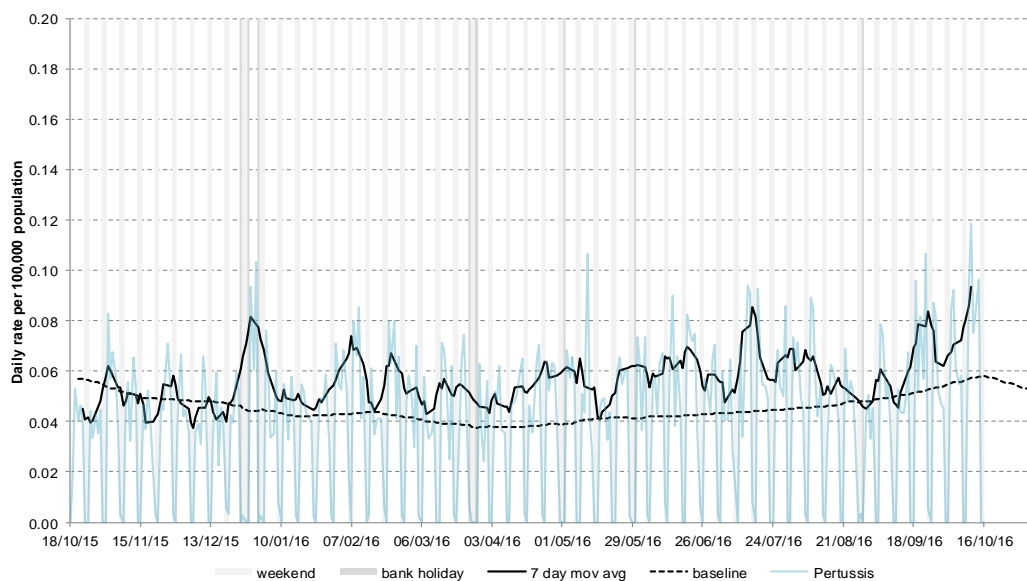

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

* 7-day moving average adjusted for bank holidays.

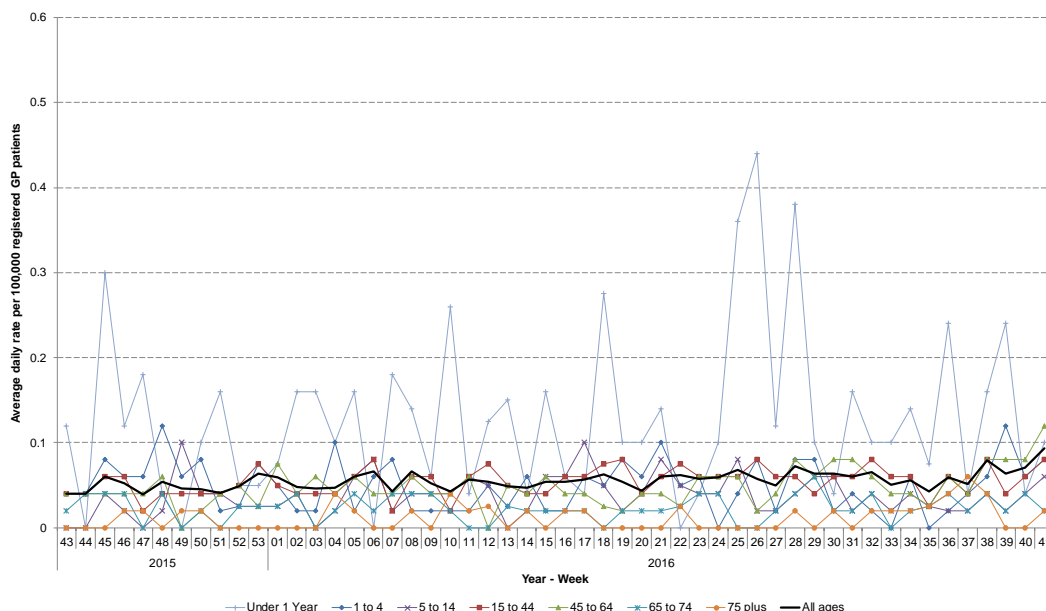

16: Pertussis

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

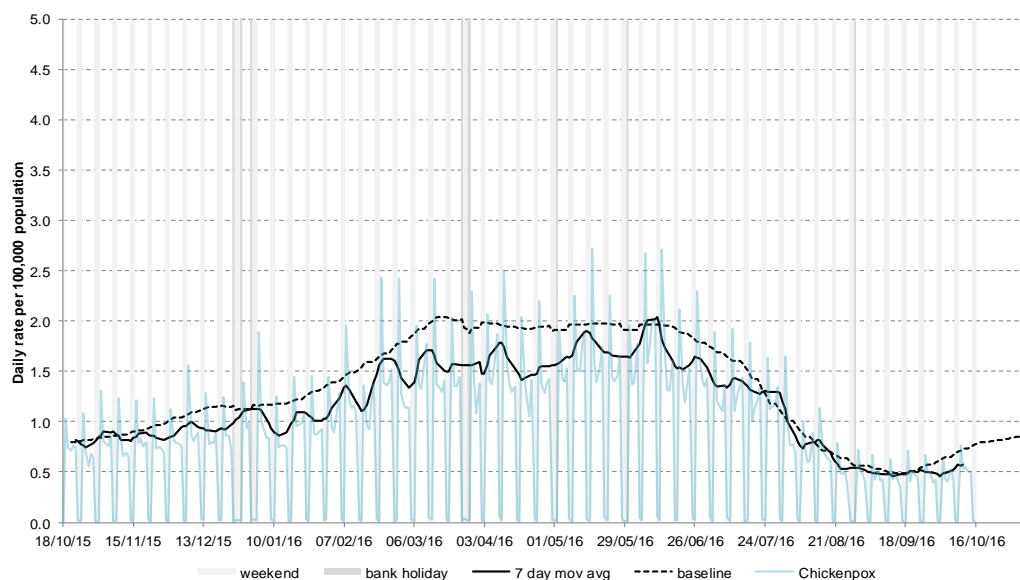

16a: Pertussis by age

Average daily incidence rate by week per 100,000 population (all England).

17: Chickenpox

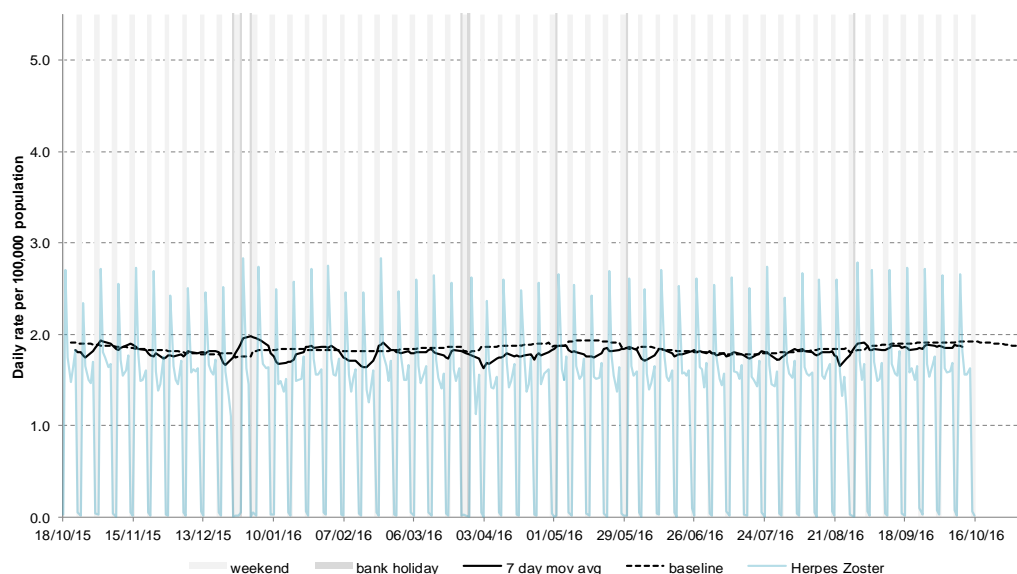

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

* 7-day moving average adjusted for bank holidays.

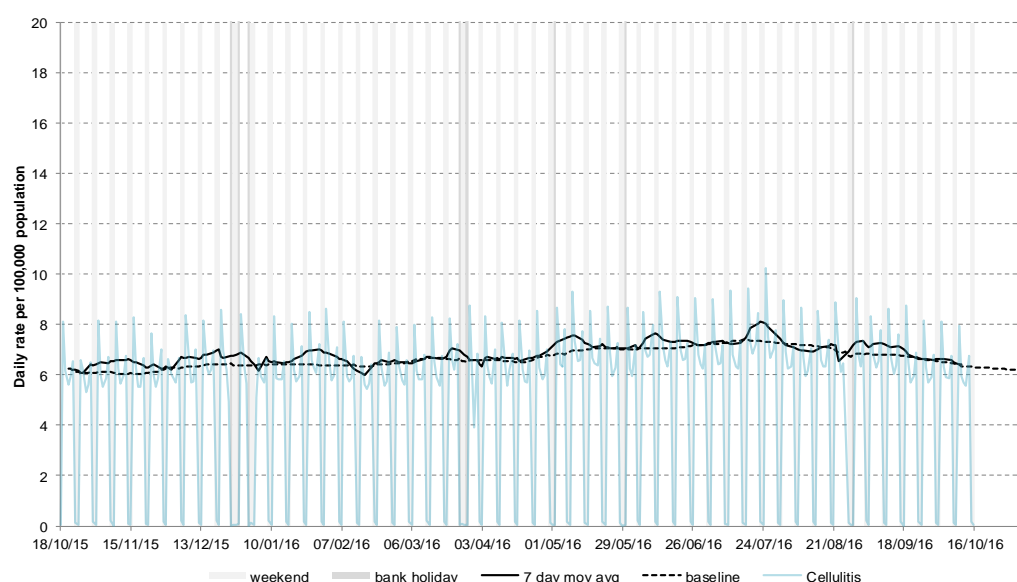

18: Herpes zoster

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

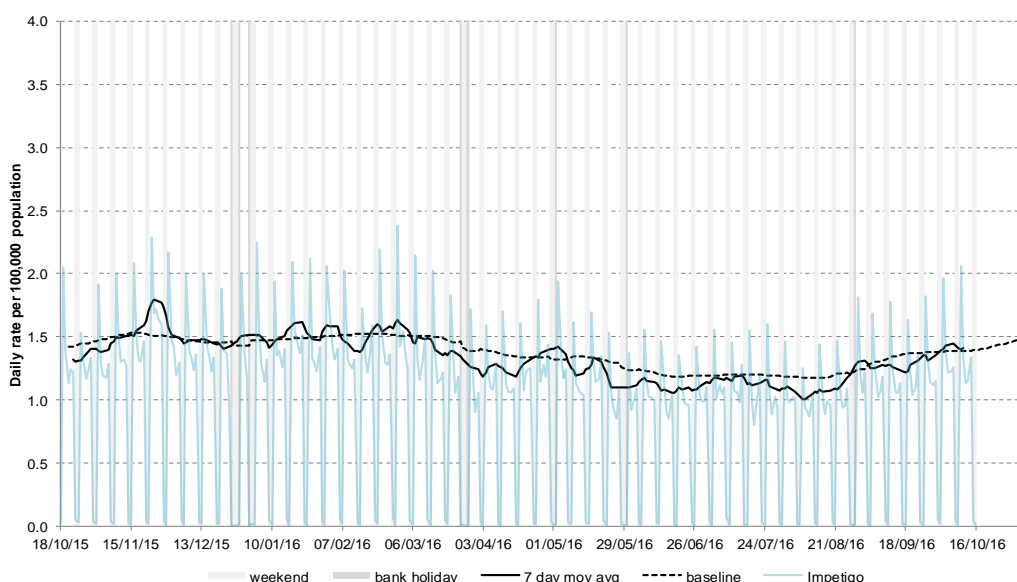

19: Cellulitis

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

20: Impetigo

Daily incidence rate (and 7-day moving average*) per 100,000 population (all England, all ages).

* 7-day moving average adjusted for bank holidays.

Notes and further information

- The Public Health England GP in hours surveillance system is a syndromic surveillance system monitoring community-based morbidity recorded by GP practices.
 - GP consultation data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.
 - This system captures anonymised GP morbidity data from two GP clinical software systems, EMIS, from version 1 of the QSurveillance® database, and TPP SystmOne.
 - Baselines represent seasonally expected levels of activity and are constructed from historical data. Furthermore, they take into account any known substantial changes in data collection, population coverage or reporting practices. Baselines are refreshed using the latest data on a regular basis.
-

Maps:

- From week 40 2015 the influenza-like illness thresholds illustrated in the bulletin appendix maps are calculated using the “Moving Epidemic Method” (MEM).¹ MEM is used as a standard methodology for setting influenza surveillance thresholds across Europe.²
- The ILI thresholds have been calculated separately for each of the nine PHE Centres to allow for structural differences between areas e.g. background rates are historically higher in London than other areas of England.
- The current ILI thresholds are based on six previous influenza seasons (excluding the 2009/10 H1N1 pandemic). In future, thresholds will be recalculated each year incorporating the latest season’s data.
- The maps on the following pages contains Ordnance Survey data © Crown copyright and database right 2014. Contains National Statistics data © Crown copyright and database right 2014.
