**Attachments:** Mid Wales\_20110724\_01.JPG

Dear Sir,

I would like to make representation against these applications on the grounds of combined landscape and visual impact. I am not going to go into a long winded dialog as to why these wind farms should not be allowed to go ahead because I think a picture paints a thousand words. Attached you will find a picture I have taken from Kerry Ridgeway which is close to the English border, towards the Welsh coast. In the distance you can see Cadair Idris and the land in the foreground is the land that both these wind farms will be decimating if allowed to go ahead. How anybody can consider spoiling this beautiful landscape for power which cannot be relied upon is beyond comprehension. As a chartered electrical engineer I can tell you that the only way we can meet our future energy needs is to increase our nuclear capability to cover base load and make up the rest with a mix of gas and renewables such as solar, hydropower and tidal. Tidal power should especially be exploited with the tidal ranges we see in this country such as the 8m in the Severn estuary.

Best Regards

BSc. CEng MIET
