Carr Crofts Waste Treatment Facility

Permit number EPR/YP3832WS

Introductory note

This introductory note does not form a part of the permit

The main features of the permit are as follows.

The facility comprises the following activities listed in Schedule 1 of the EP Regulations:

- Section 5.6 Part A(1)(a)
- Section 5.3 Part A(1)(a)(ii)
- Section 5.3 Part A(1)(a)(iv)
- Section 5.4 Part A(1)(a)(ii)

And the following waste operations:

- Storage (D15 & R13) and repackaging of non-hazardous waste for disposal or recovery (D14, R3, R4 & R5).

The site is located on Carr Crofts Drive, Leeds (grid ref: SE 26792 33146). The facility comprises a warehouse building with office facilities and a yard area. The site has other similar units neighbouring, and housing within 50 m to the south and south-east. Several railway tracks run approximately 50 m to the north-west of the site. Part of the Leeds-Liverpool Canal, a site of special scientific interest (SSSI) lies within 2 km of the site, as do several local wildlife sites.

The facility will handle both hazardous and non-hazardous waste on site falling primarily in two categories the first being 'packaged waste' such as drummed wastes for storage and repackaging prior to off-site disposal or recovery and secondly 'liquid waste' such as oil/water mixes and leachates for treatment. Liquid waste will be brought to site via road tanker for bulk storage in tanks and then treatment via settlement/separation to remove oil phases and solids, followed by Ultrafiltration (UF). Annual waste throughput is less than 30,000 tonnes/year. Company vehicles will also be cleaned on site in the transport yard in a dedicated contained area and the wash water will be treated via the UF plant. The final UF plant permeate will be discharged to sewer whilst the concentrate will be despatched off-site for disposal.

The site surface is concrete, and designed with suitable segregation, secondary and tertiary containment for the types and quantities of wastes handled. The operator works to their own Environment Management System (EMS) based on ISO 14001 principles.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.

‘stabilisation’ means processes which change the hazardousness of the constituents in the waste and transform hazardous waste into non-hazardous waste.

‘solidification’ means processes which only change the physical state of the waste by using additives without changing the chemical properties of the waste.

‘partly stabilised wastes’ means wastes containing, after the stabilisation process, hazardous constituents which have not been changed completely into non-hazardous constituents and could be released into the environment in the short, middle or long term.

Where a minimum limit is set for any emission parameter, for example pH, reference to exceeding the limit shall mean that the parameter shall not be less than that limit.

Unless otherwise stated, any references in this permit to concentrations of substances in emissions into air means:
