Pesticide Residues in Food**

*Aubergine*

**Pesticide Residues Monitoring Report 2015**

## This is an amalgamation of the quarterly reports

### Introduction

We last surveyed aubergine in 2013. This year aubergine was being monitored across the EU as part of the EU co-ordinated multi-annual control programme.

We sampled and reported aubergine in every quarter of 2015.

The aubergine samples were either collected by the Rural Payment Agency's Horticultural Marketing Inspectors from a range of points in the supply chain (wholesale markets, retail depots, ports and import points) or bought by a market research company from retail outlets across the UK.

### Conclusions

#### Summary statement

None of the residues detected by the laboratory would be expected to have an effect on health.

### Results

<b>When samples were taken</b>	Between January and November 2015
<b>Number of samples</b>	96 samples were tested for up to 341 pesticide residues
<b>Origin of samples</b>	<u>Aubergines</u> <ul style="list-style-type: none"><li>• 5 samples came from the UK</li><li>• 1 sample was imported from outside the EU</li><li>• 90 samples came from the EU</li></ul>
<b>Residues found</b>	54 samples contained no residues from those sought 42 samples contained residues above the reporting level None of the samples contained residues above the MRL None of the samples were labelled as organic.
<b>Multiple residues</b>	20 samples contained residues of more than one pesticide <ul style="list-style-type: none"><li>• 9 samples contained 2 residues</li><li>• 4 samples contained 3 residues</li><li>• 5 samples contained 4 residues</li><li>• 2 samples contained 5 residues</li></ul>

### Risk assessments

<b>Number of risk assessments</b>	The laboratory detected 27 different pesticide residues. Following the Chemicals Regulation Directorate (CRD)'s risk assessment, we do not expect these residues to have an effect on health.
<b>Combined risk assessments</b>	<p>Some samples contained residues of more than one pesticide. When samples contain more than one pesticide belonging to the groups that CRD usually assess, where toxicologists expect these to add to each other's effect (have the same toxicological mode of action), CRD carry out a combined risk assessment.</p> <p>CRD carried out risk assessment of samples containing at least two pesticides with similar toxicological modes of action. We would not expect any of these combinations to have an effect on health</p>

Imported (EC) samples of aubergines were from Belgium (1), Poland (1), Spain (47), the Netherlands (41).  
Imported (Non-EC) samples of aubergines were from Kenya (1).  
UK samples of aubergines (5).

Residues were distributed by country of origin, as follows:

acetamiprid	Spain (9), the Netherlands (2)
azoxystrobin	Spain (4)
bupirimate	Spain (3)
carbendazim	Spain (1), the Netherlands (1)
chlorothalonil	Spain (9)
