

04 October 2017

Year: 2017 Week: 39

In This Issue:

- Key Messages.
- Weekly summary.
- Total contacts.
- Syndromic indicators.
- Notes and caveats.
- Further information.
- Acknowledgements.

Syndromic indicators at a glance:

Number of contacts and percentage of Read coded contacts.

1: Total out-of-hours contacts:

Daily total number of out-of-hours and unscheduled contacts and 7 day average (adjusted for bank holidays).

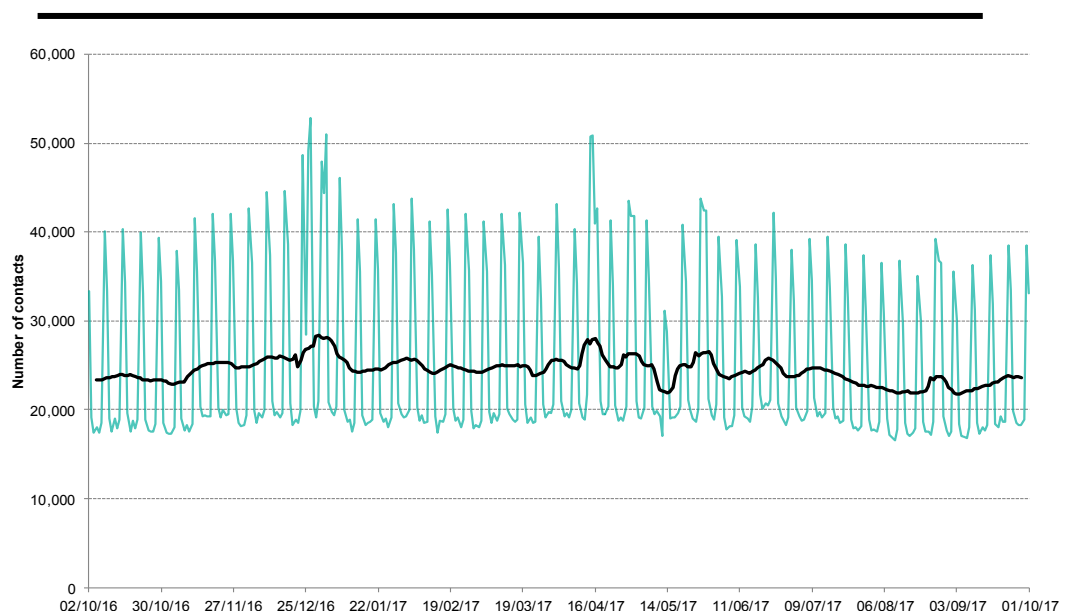

Key messages

Data to: 01 October 2017

GP out of hours consultations for acute respiratory infection continued to increase during week 39 (figures 2 & 2a). There were decreases in difficulty breathing/wheeze/asthma consultations in children during week 39 (figure 5a).

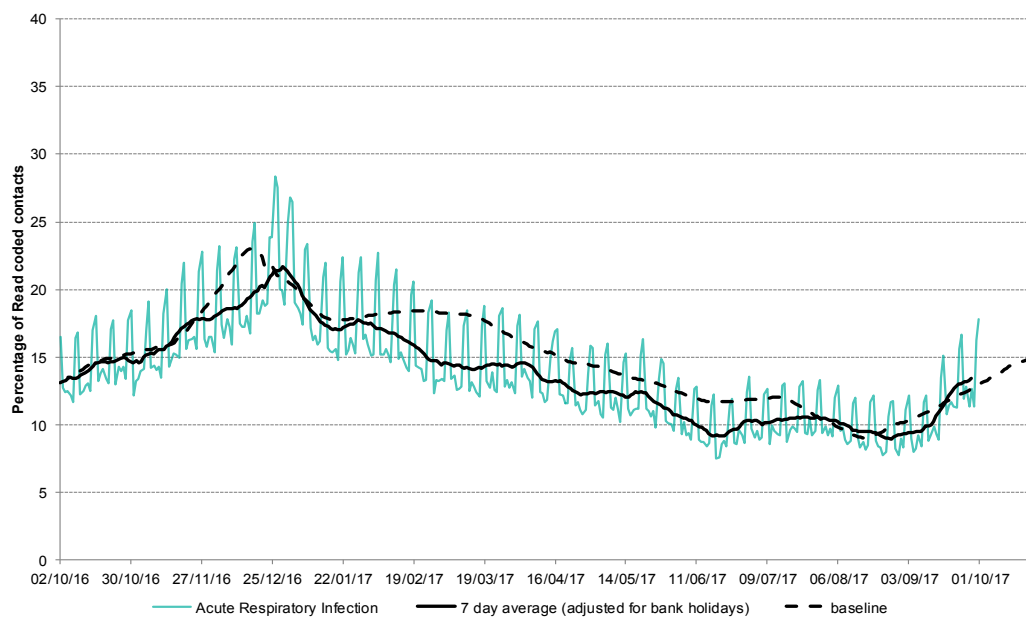

Key indicator	No. of contacts	% Week 39	% Week 38	Trend*
All OOH contacts, all causes	164,912			
Acute respiratory infection	11,786	14.33	13.57	↑
Influenza-like illness	111	0.13	0.15	↔
Bronchitis/bronchiolitis	157	0.19	0.19	↔
Difficulty breathing/wheeze/asthma	2,065	2.51	2.59	↔
Pharyngitis	83	0.10	0.08	↔
Gastroenteritis	3,193	3.88	3.81	↔
Diarrhoea	802	0.97	0.94	↔
Vomiting	1,222	1.49	1.43	↔
Myocardial infarction	818	0.99	1.03	↓

*Trend: reports on the trend seen over previous weeks in the percentage of Read coded contacts.

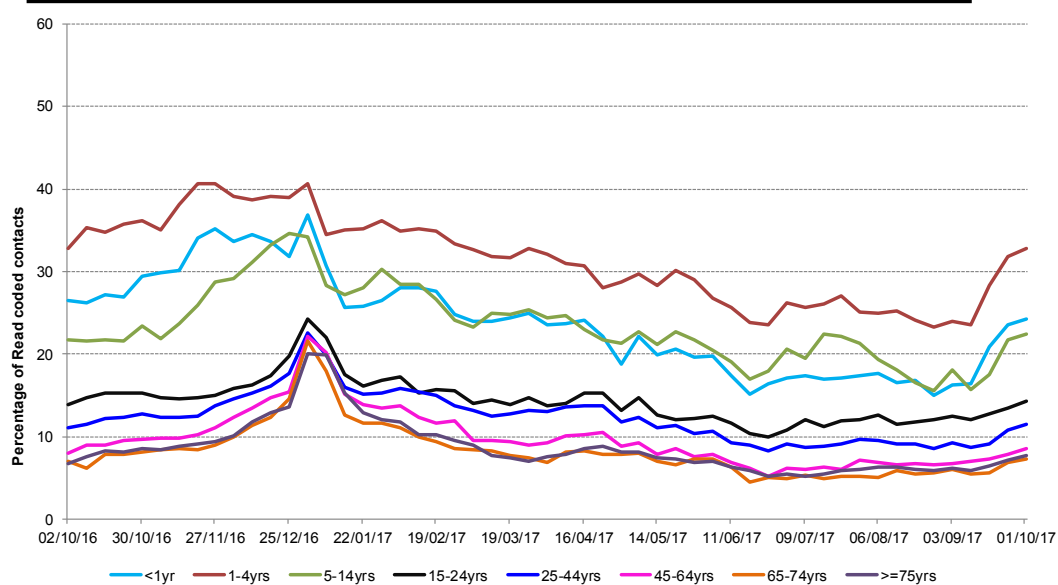

2: Acute Respiratory Infection daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

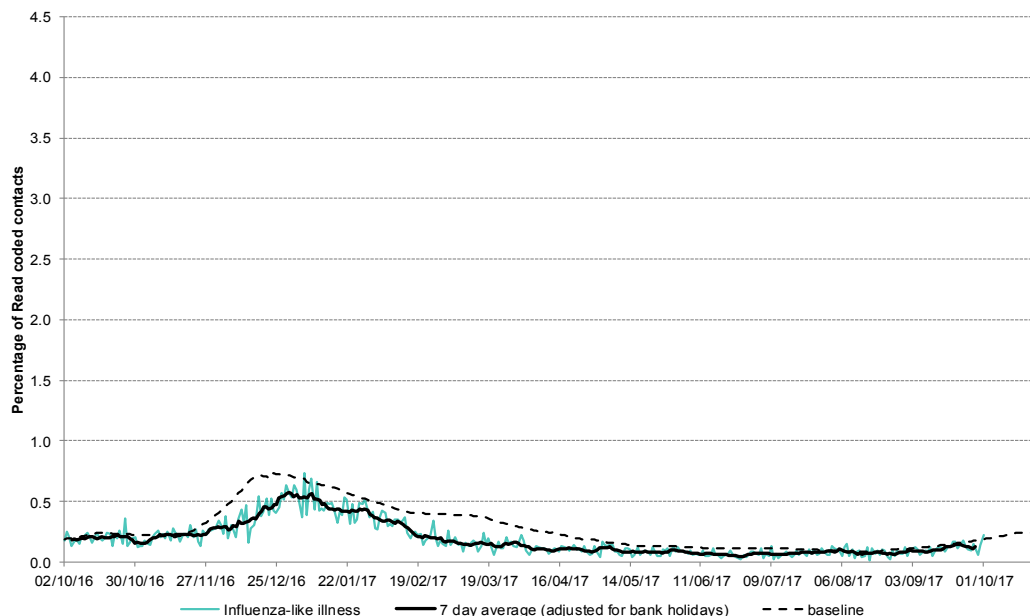

2a: Acute Respiratory Infection contacts by age group.

3: Influenza-like illness daily contacts.

Shown as a percentage of the total contacts with a Read code and as a 7 day average*.

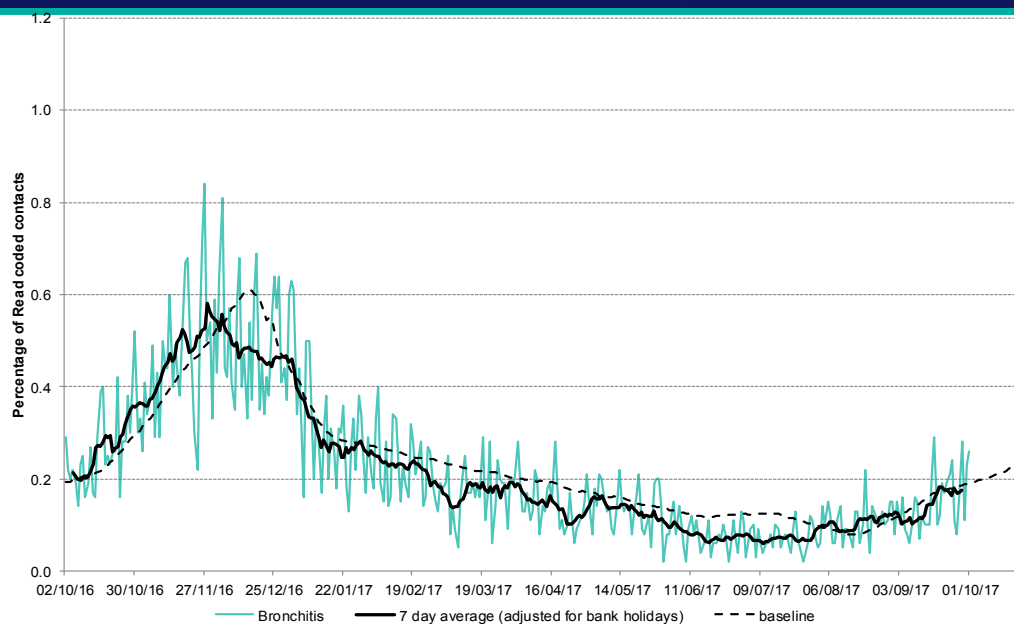

*7-day moving average adjusted for bank holidays.

Notes and caveats:

- This bulletin presents data from the Public Health England (PHE) GP Out-of-hours\Unscheduled Care Surveillance System (GP OOHSS).
- Fully anonymised data from GP out-of-hours (OOH) and unscheduled care service providers in England are being transferred to the PHE for analysis and interpretation by the PHE Real-time Syndromic Surveillance Team (ReSST).
- This system supplements existing PHE syndromic surveillance systems by monitoring data on general practitioner consultations outside of routine surgery opening times (evenings, weekends and bank holidays) and unplanned contacts within NHS primary care.
- The key indicators presented within this bulletin are derived by grouping selected Read coded consultations.
- GP OOH consultation data are analysed on a daily basis to identify national and regional trends. A statistical algorithm underpins each system, routinely identifying activity that has increased significantly or is statistically significantly high for the time of year. Results from these daily analyses are assessed by the ReSST, along with analysis by age group, and anything deemed of public health importance is alerted by the team.
- Baselines represent seasonally expected levels of activity and are constructed from historical data. Furthermore, they take into account any known substantial changes in data collection, population coverage or reporting practices. Baselines are refreshed using the latest data on a regular basis.

Further information:

The GP Out-of-Hours Surveillance System Bulletin can also be downloaded from the PHE Real-time Syndromic Surveillance website which also contains more information about syndromic surveillance:
