

# **UK Opportunities and Capability in Communications and Electronics**

**7 December 2017**

**Phillip White, Sector Specialist**

# DIT – Introduction to our services

As a fully integrated advisory service we will support any aspect of plans to expand in the UK

- Dedicated, **professional assistance** on locating and expanding your business in the UK
- We are a **FREE & CONFIDENTIAL** service to support your UK expansion and growth to be as efficient as possible, helping you with:
  - Links with centres of excellence (e.g. universities);
  - Information on tax, regulatory and business planning issues;
  - Information on financial incentives;
  - Information on staff recruitment, retention and training programmes;
  - Assistance with immigration issues

# Industrial Digitalization

UK Government Industrial Digitalization Review,  
November 2017

Focussed on five Industrial Digitalization Technologies:

- Artificial intelligence, machine learning and data analytics,
- Additive manufacturing,
- Robotics and automation,
- Virtual reality and augmented reality,
- The **Industrial Internet of Things (IIoT)** and connectivity (5G, LPWAN, etc.)

# Overview

---

- Sensors
- IoT Wireless Network Technologies
  - LoRa, NB-IoT, Telensa, Wireless technology clusters
- Data Analytics and Artificial Intelligence
- Applications
  - Smart Cities, Industrial Digitalization, Automotive
- IoT Security
- Innovating in the UK

# Overview

---

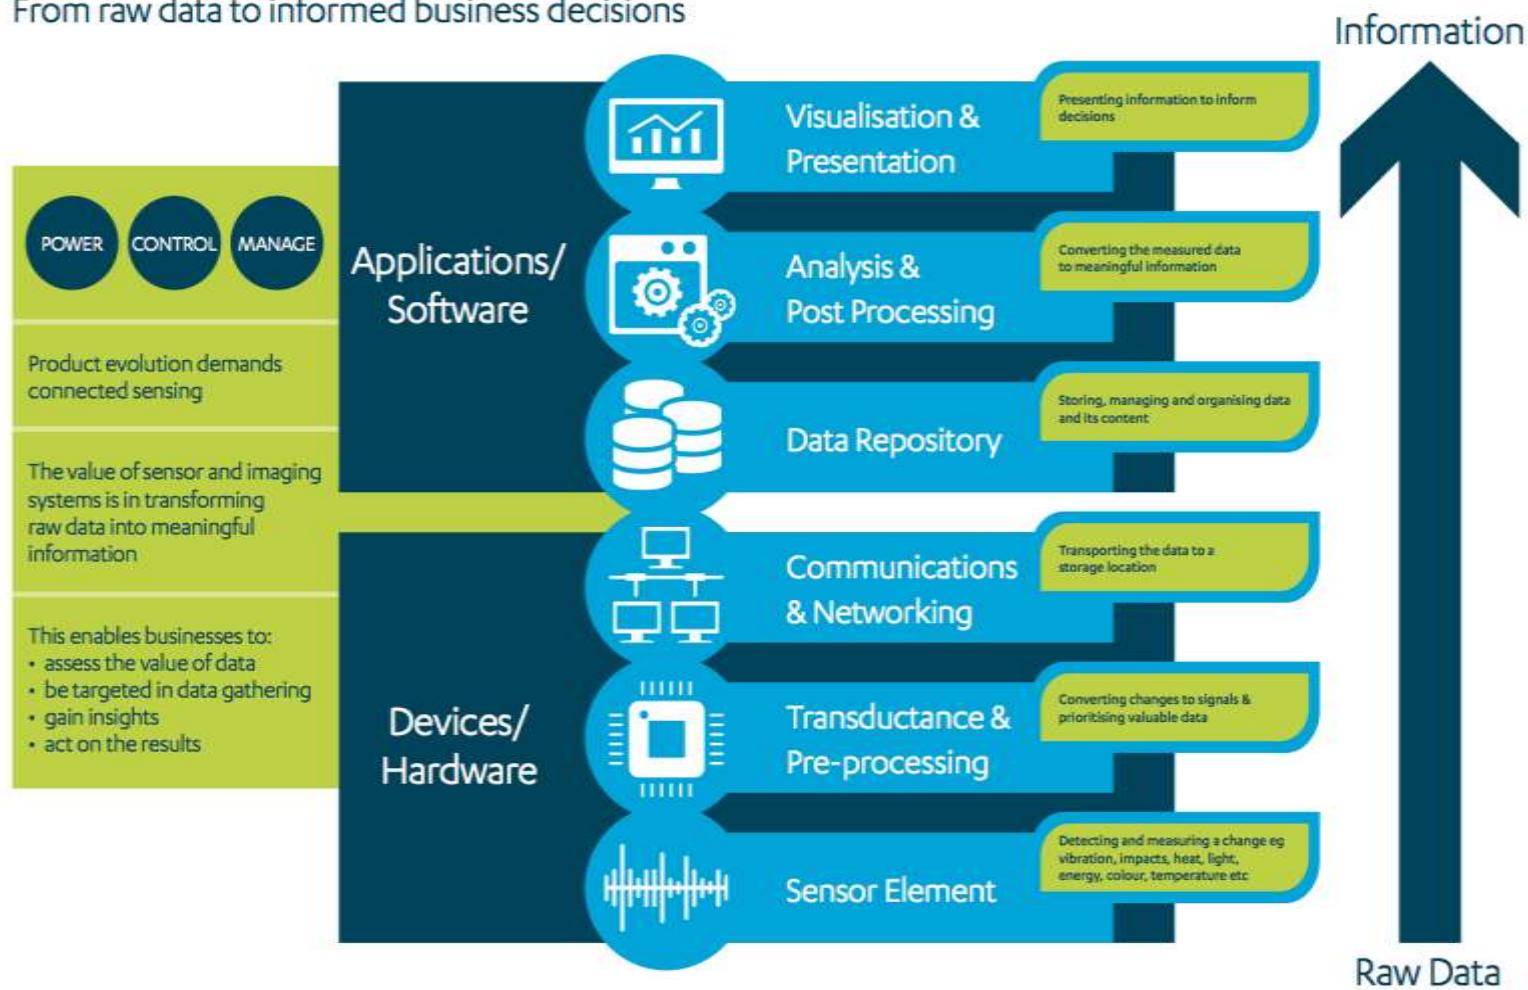

- Sensors
- IoT Wireless Network Technologies
  - LoRa, NB-IoT, Telensa, Wireless technology clusters
- Data Analytics and Artificial Intelligence
- Applications
  - Smart Cities, Industrial Digitalization, Automotive
- IoT Security
- Innovating in the UK

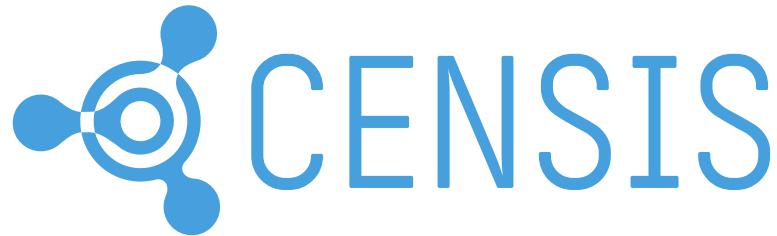

# The Sensor Systems Stack

## The Sensor Systems Stack

From raw data to informed business decisions

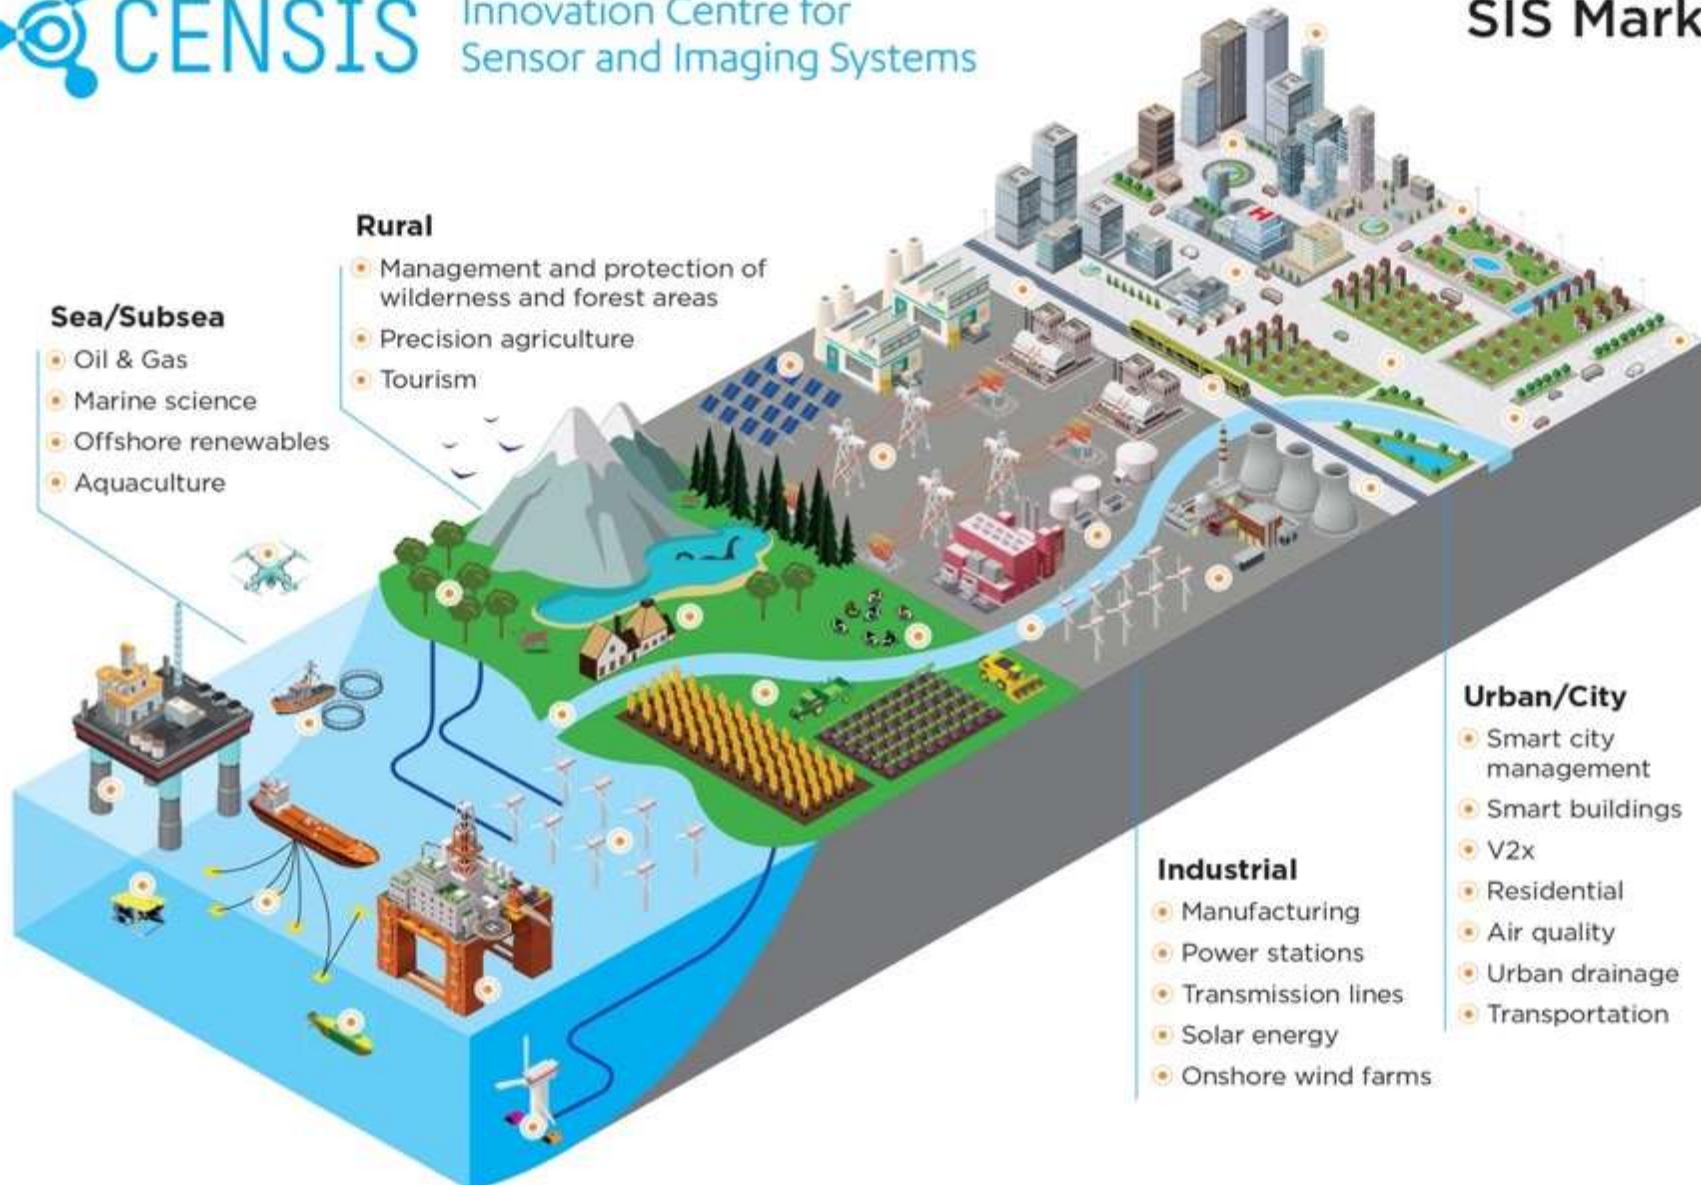

Innovation Centre for  
Sensor and Imaging Systems

Building Scotland's IoT network

# Overview

---

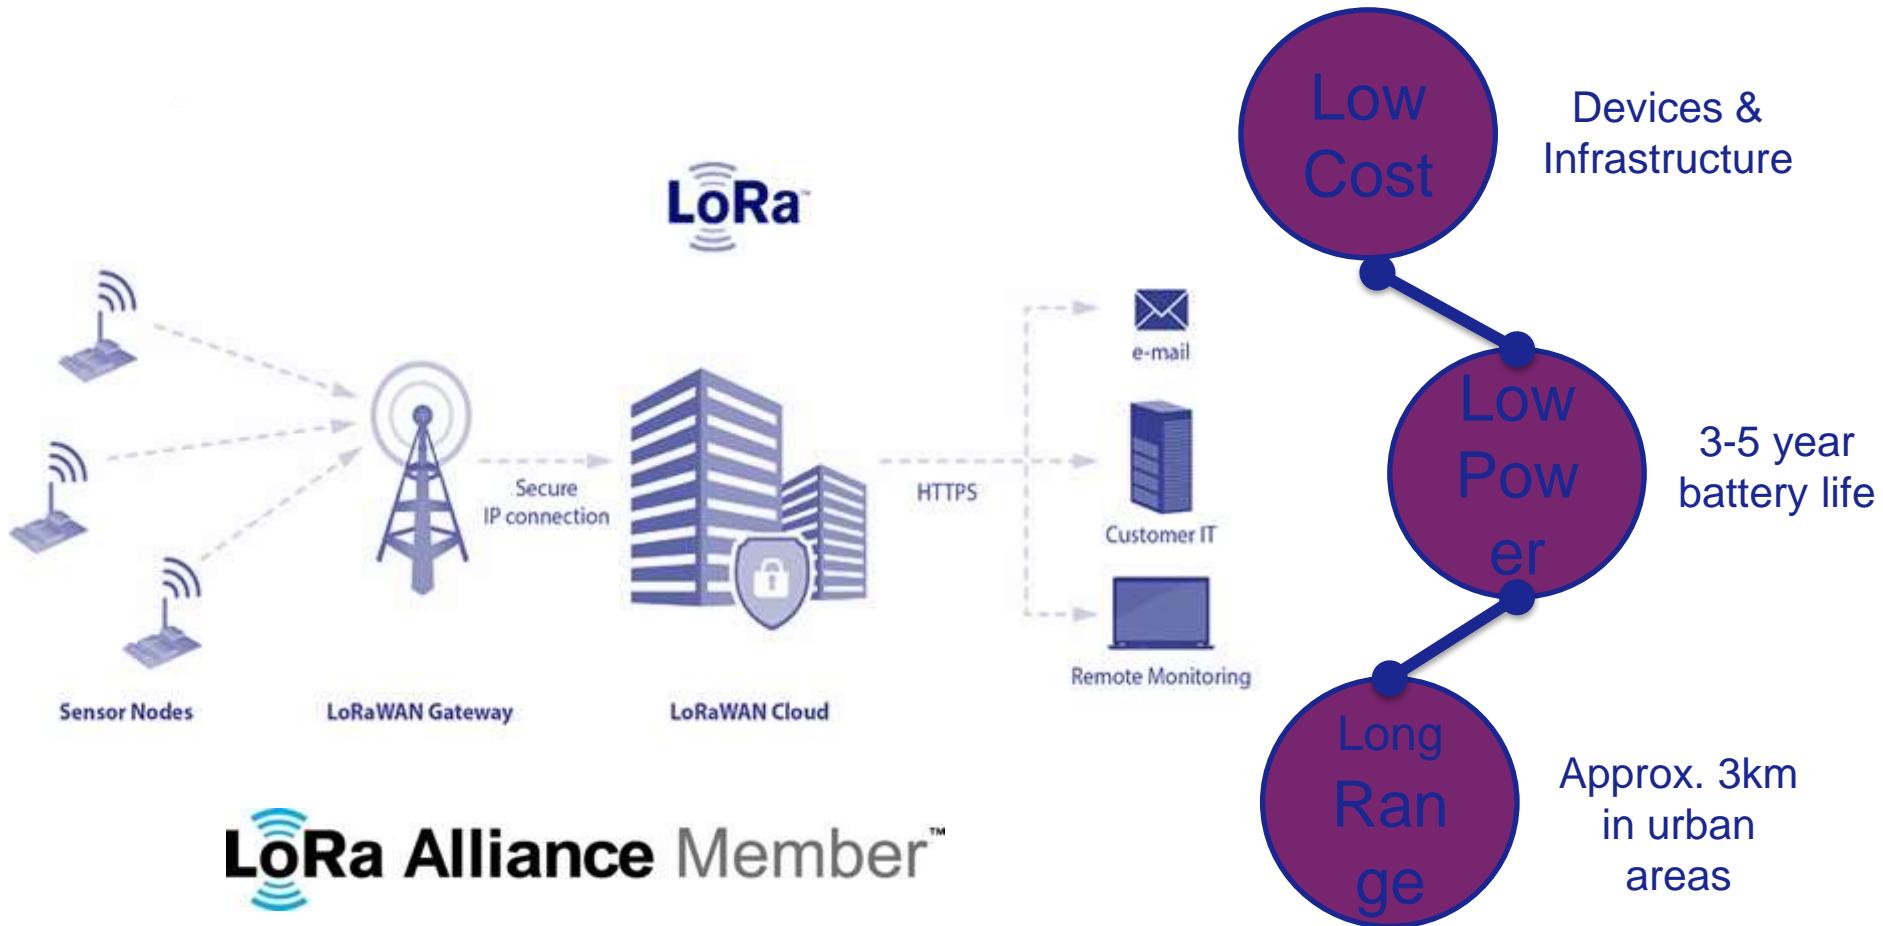

- Sensors
- IoT Wireless Network Technologies
  - LoRa, NB-IoT, Telensa, Wireless technology clusters
- Data Analytics and Artificial Intelligence
- Applications
  - Smart Cities, Industrial Digitalization, Automotive
- IoT Security
- Innovating in the UK

# IoT Network Technologies

---

- LoRaWAN – new users, companies, private, public open, free access
- Narrowband IoT – cellular mobile network operators
- Telensa – mesh network for connected street lighting
- Sigfox – new network operators, wireless mast owners, cities

# Where does LPWAN fit?

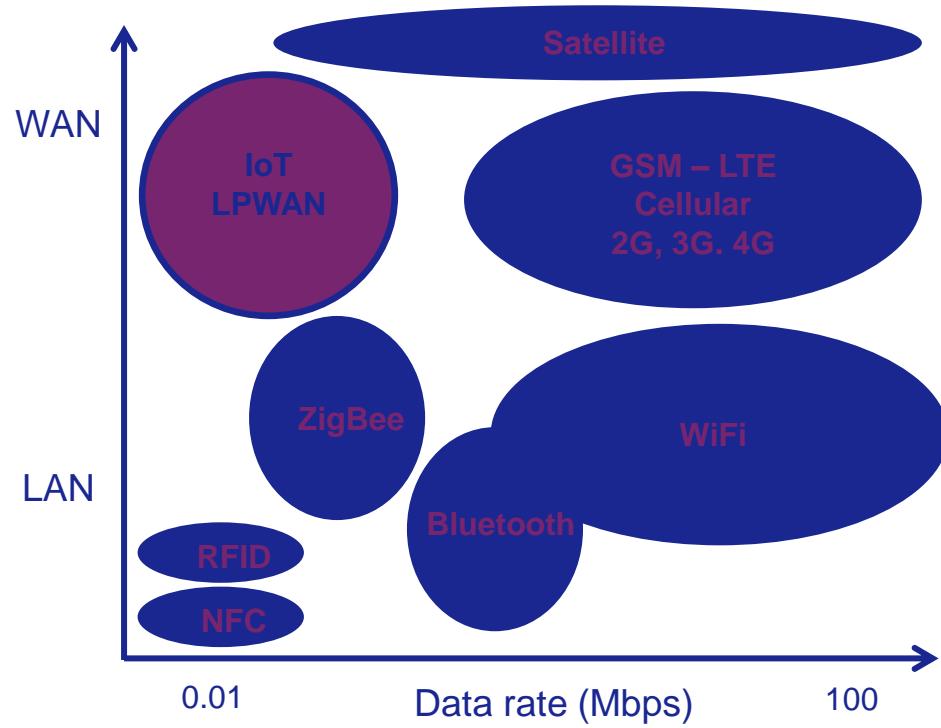

Licence-exempt ISM  
bands globally

Sub 1GHz - exceptional  
RF characteristics

Designed for small IoT  
data packets

Simple network  
infrastructure

Low cost (capex/opex)

### What LoRa **does** deliver :

Transformative technology with positioning capability

- Cost effective enabling of IoT connectivity to new types of devices
- Infrastructure needed for development and scaling of new IoT offerings

### What LoRa **does NOT** deliver :

Internet connectivity to the disconnected

- MAXIMUM data rate is <1% of an 8Meg link!

A means for transferring video, audio, etc.

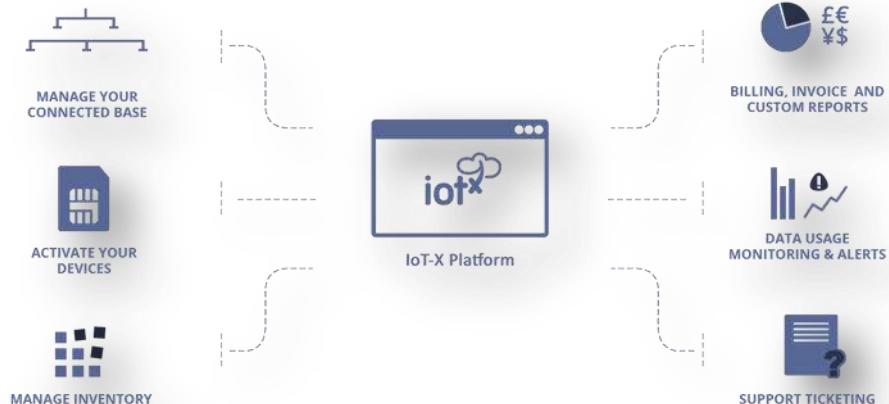

A head-to-head competitor with cellular M2M

# Network management

## Stream Technologies Cloud Platform

Nodes report back to Stream data collection infrastructure

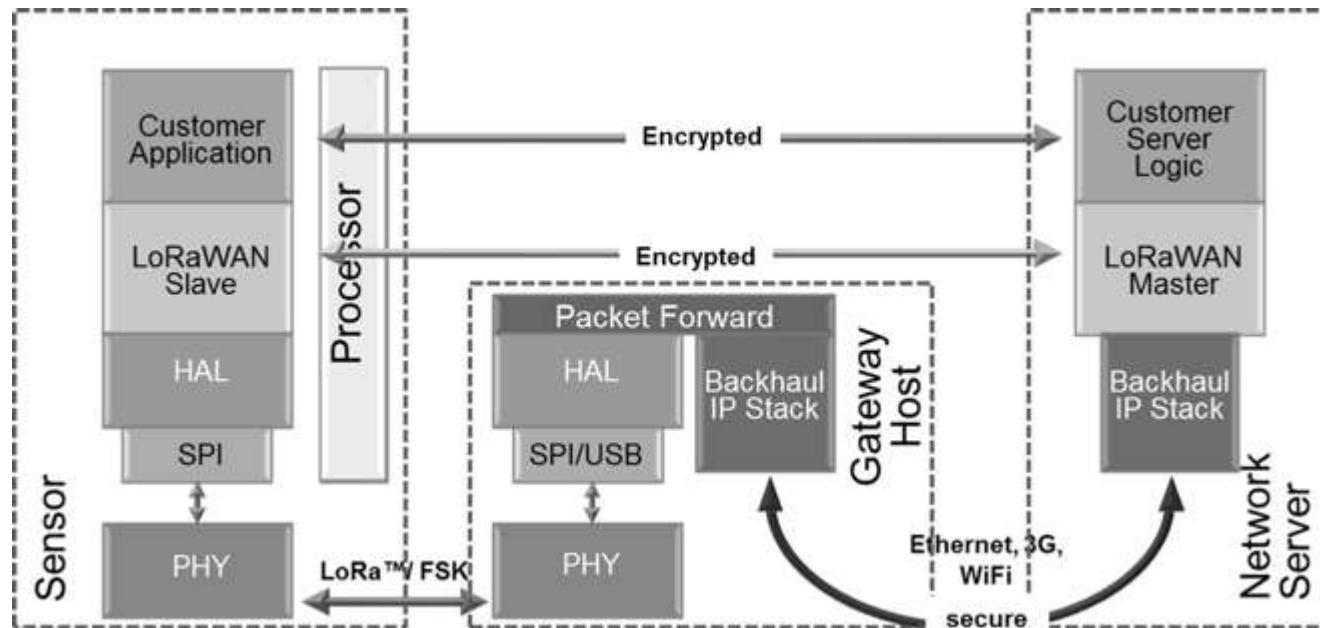

IoT-X provides management, monitoring and control to subscribers

Devices publish to feeds that are allocated per company

Stream manage security of feeds and separation of data

### Three level encryption

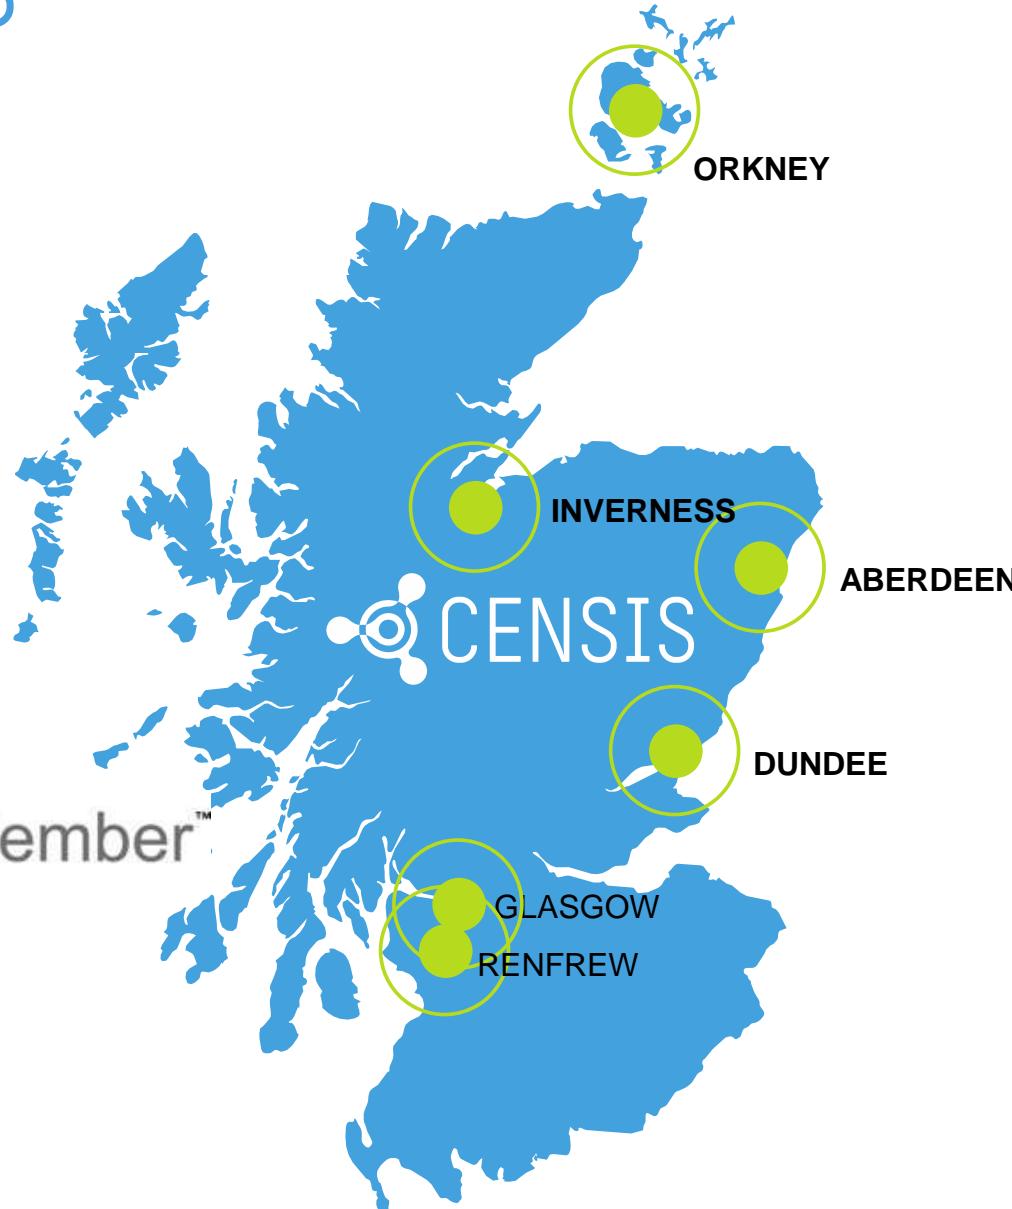

- Device specific key (EUI128)
- Unique Application key (EUI64)
- Unique Network level key (EUI64)

# CENSIS CENSIS LoRa Network Partnerships

 LoRa Alliance Member™

# Geolocation Solution in Glasgow

# CENSIS LoRa network offering

Lowest possible barriers to entry

First concept to finished product

Seamless growth with need

Scale cost and resource as you grow

- Open architecture

- Your data

- Collaborative ecosystem partnering

- Local delivery and shared benefit

- Global replication

- From S/W to full deployment

Neul acquired by Huawei

Huawei and Vodafone NB-IoT demo lab, May 2016

# Narrowband IoT

## What is NarrowBand IoT?

# NB-IoT

Is a Low Power Wide Area wireless network technology specifically for connecting devices with low bandwidth requirements, using low power whilst providing increased penetration. Many millions of devices will be connected via LPWA.

10+ Years  
Battery Life

Deep  
Penetration

Mass  
Deployment

Low  
Bandwidth

Device  
Cost

# Narrowband IoT

## What applications are suited to NB-IoT?

### Gas metering

Large homogenous market measured in millions

**Battery life and propagation is critical**

Large number of potential meter manufacturers

### Water metering

Large homogenous market measured in millions

**Battery life and propagation is critical**

Large number of potential meter manufacturers

### Liquid and pressurised fuels

Large homogenous market measured in millions

Asset is currently un monitored & losses are high

**Battery life is critical**

### Smart Bins

Growing market with good business case

**Battery life and network coverage is critical**

Complements our hi end connected bins

### Environmental Monitoring

Latent market waiting for a low power solution

**Battery life and network coverage is critical**

Fragmented channel to market in low volumes

### Smoke and fire alarms

Massive market measured in hundreds of millions

**Battery life and ability to test device is critical**

High volume B2C play

### Parking monitoring

Market measured in hundreds of thousands

**Battery life and low install cost are critical**

Low data throughput

### Alarms and event detectors

Market measured in hundreds of thousands

**Battery life is ultra critical**

Very low data throughput on check and trigger

# Narrowband IoT

Different technologies for specific purposes

## 2G-4G

- ✓ Sophisticated devices
- ✓ High performance
- ✓ Fast data rate
- ✓ High power

## NB-IoT

- ✓ Low bandwidth
- ✓ Deep coverage
- ✓ Long battery life
- ✓ Low cost devices

# Narrowband IoT

Narrowband-IoT Support is global

NB IoT is supported by over 42 of the world's largest operators who provide communications for over 3.4bn customers and geographically serve over 90% of the M2M market

# Narrowband IoT

We are running NB-IoT pilots around the world

## Open Labs – UK, DE, IT, ES

- Vodafone's Open Lab created for live network tests, demos and pilots.

## Turkey

- NB-IoT smart parking demoed in Istanbul

## Spain

- Tested in real water meter locations with Aguas de Valencia
- Live pilots in delivery with 6 Utilities companies
- Working with 20+ utility hardware companies

## Italy

- Gas Meter trials to be delivered in H2 2017

## Australia

- Testing with South East Water across their sewer pressure monitoring system

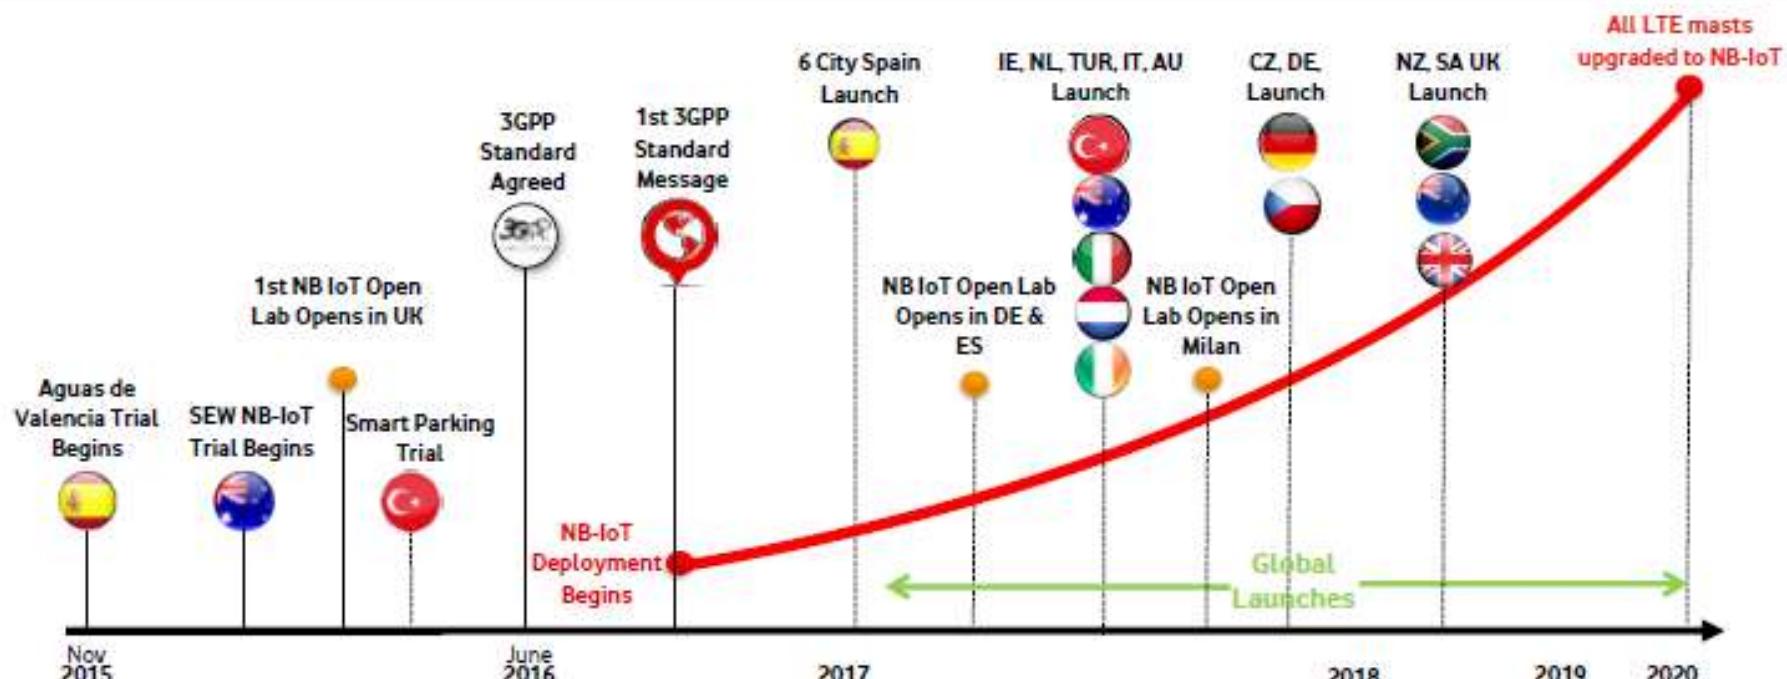

More Information Available on Request

# Narrowband IoT

## When will NB-IoT be available?

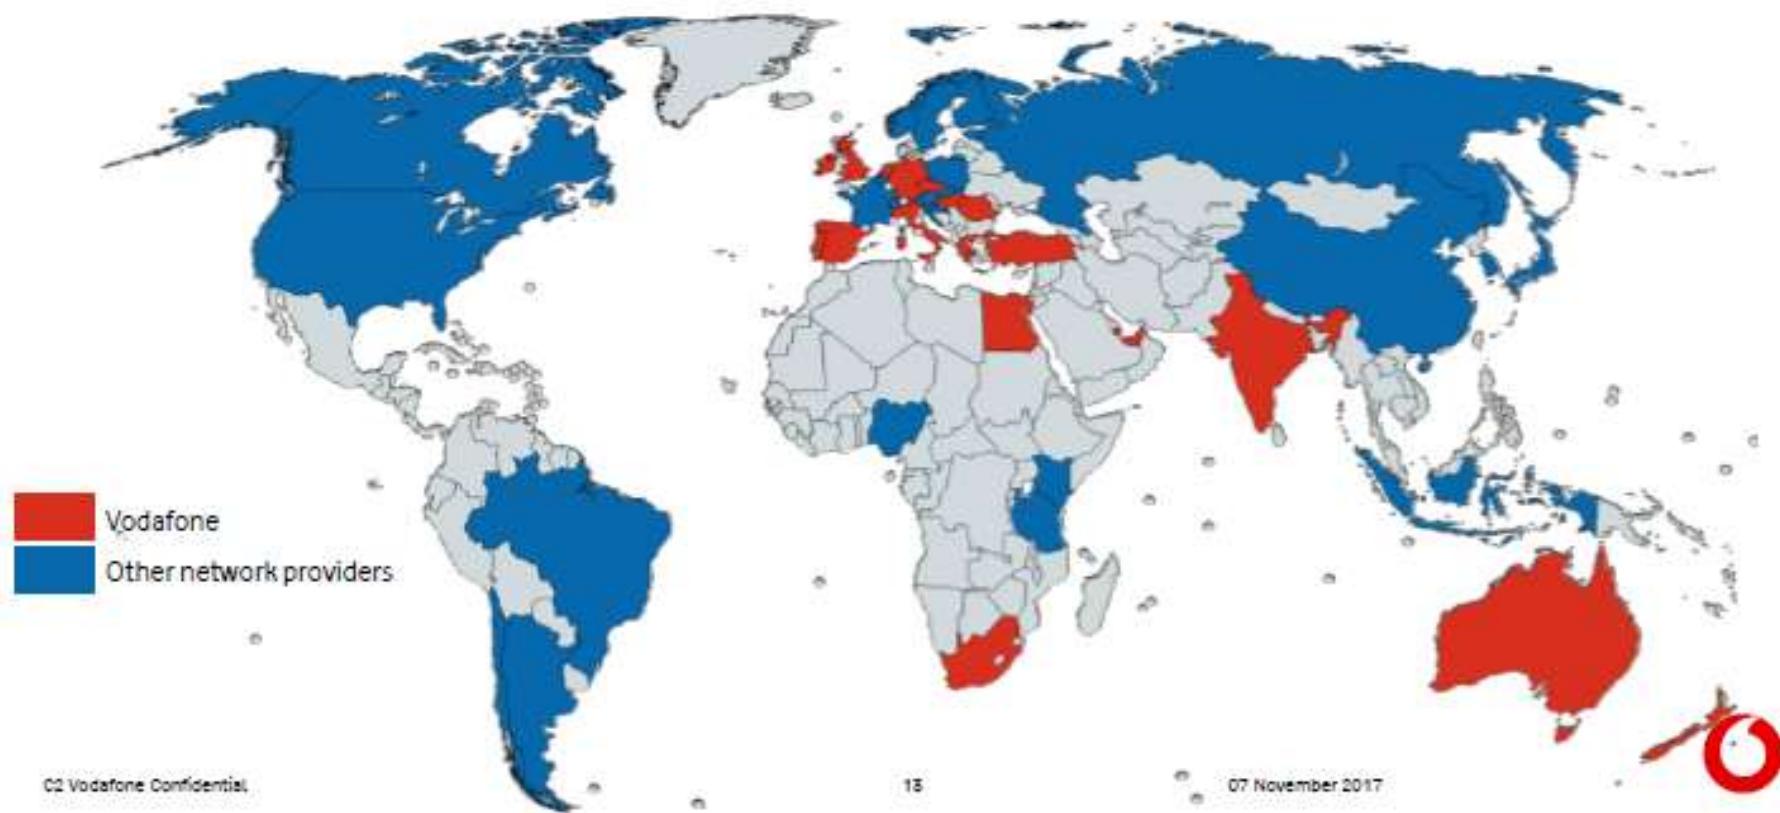

...More market launches to be confirmed!

# Narrowband IoT

## NB-IoT expected roll-out

# Narrowband IoT

Narrowband-IoT Support is global

NB IoT is supported by over 42 of the world's largest operators who provide communications for over 3.4bn customers and geographically serve over 90% of the M2M market

# Examples of UK Artificial Intelligence companies that have been acquired 1

---

**Deepmind:** deep neural networks and reinforcement learning. builds general-purpose algorithms for use in simulations, e-commerce applications, and games. Acquired by **Google** in 2014

Won in five match game of Go against the current world champion.

**Dark Blue Labs:** Deep learning and language translation, dialogue, summarization, sentiment analysis, semantic parsing, question answering and, and mapping language to action. Spun-out of **Oxford University**. Acquired by **Google** in 2015

**Vision Factory:** Deep convolutional neural networks for image recognition. Spun-out of **Oxford University**. Acquired by **Google** in 2015

# Examples of UK Artificial Intelligence companies that have been acquired 2

---

**Evi**, natural language understanding, knowledge base and semantic search for digital personal assistant. Acquired by **Amazon** in 2013

**VocalIQ**, voice recognition for devices and apps. Acquired by **Apple** in 2015.

**Swiftkey**, predictive text recognition for mobile phones. Acquired by **Microsoft** in 2016

**Magic Pony**, video upscaling, compression and enhancement. Acquired by **Twitter** in 2016.

# Artificial Intelligence companies - 1

**Oxbotica:** spun-out of **Oxford University**. Autonomous vehicle imaging processing and software.

**FiveAI:** Bristol and Cambridge (team from Icera and Neul). Autonomous vehicle imaging processing and software.

**Cortexica:** visual search and image recognition technology for the retail fashion industry

**Blippar:** consumer-brand interaction on mobile by image recognition and augmented reality (AR).

**Speechmatics:** spun-out of **Cambridge University**. Deep recurrent neural networks for automatic speech recognition. Converts audio to text.

# Smart City Projects

## Smart City spending plans, March 2016

Falkirk	£1.5 billion	IoT, environment sensing, energy, logistics
Milton Keynes	£10 million	Data hub for transport
Peterborough	£9.5 million	Virtual modelling, sensors
Slough	£5 million	Monitor diabetes patients
Liverpool	£7 million	Sensing of transport and environment
Liverpool	£1 million	Support patients with dementia
Ipswich	£5.2 million	Sensing of transport by mobile phone
Birmingham	£30 million	Business campus, IoT, healthcare, transport
Silvertown, East London	£10 million	Smart homes/buildings: transport, energy, waste management

## Smart City spending plans, March 2016

Manchester	£10 million	IoT sensor network
West London	£700 million	Smart homes, transport, energy, waste
Bristol	£15 million	VR/AR models: traffic, air quality, energy
Newcastle	£200 million	Smart building/homes
Cambridge	£8.15 million	Sensor network, transport, environment
Reading	£14 million	IoT, transport, assisted living, energy
Mobility Fund (across the UK)	£13 million	Venture Capital fund investing in smart transport projects across the UK
Community Action Platform for Energy	£ 100 million	Community energy projects. Developed in Milton Keynes then spread across the UK.

# Applications – Industrial Digitalization

---

UK Government Industrial Digitalization Review,  
November 2017

Focussed on five Industrial Digitalization Technologies:

- Artificial intelligence, machine learning and data analytics,
- Additive manufacturing,
- Robotics and automation,
- Virtual reality and augmented reality,
- The **Industrial Internet of Things (IIoT)** and connectivity (5G, LPWAN, etc.)

The background of the image is a dark, low-light photograph of an industrial facility. It features a complex network of steel structures, overhead conveyor belts, and various industrial equipment. A prominent yellow conveyor belt runs diagonally across the middle of the frame. In the foreground, there is a large, dark, semi-transparent watermark or logo. The word "senseye" is written in a bold, sans-serif font. The letters are split into two colors: pink for "sense" and blue for "eye".

senseye

# problem: downtime

A blurred background image of a factory floor, showing various pieces of industrial machinery, conveyor belts, and structural elements of a manufacturing plant.

24%

Percent of total manufacturing cost attributed to downtime

300%

The amount by which Total Downtime Cost is usually underestimated

90%

Amount of maintenance work categorised as 'crisis work' to fix breakdowns

\$2.5m

The cost per **hour** of downtime in automotive manufacturing

Downtime is expensive

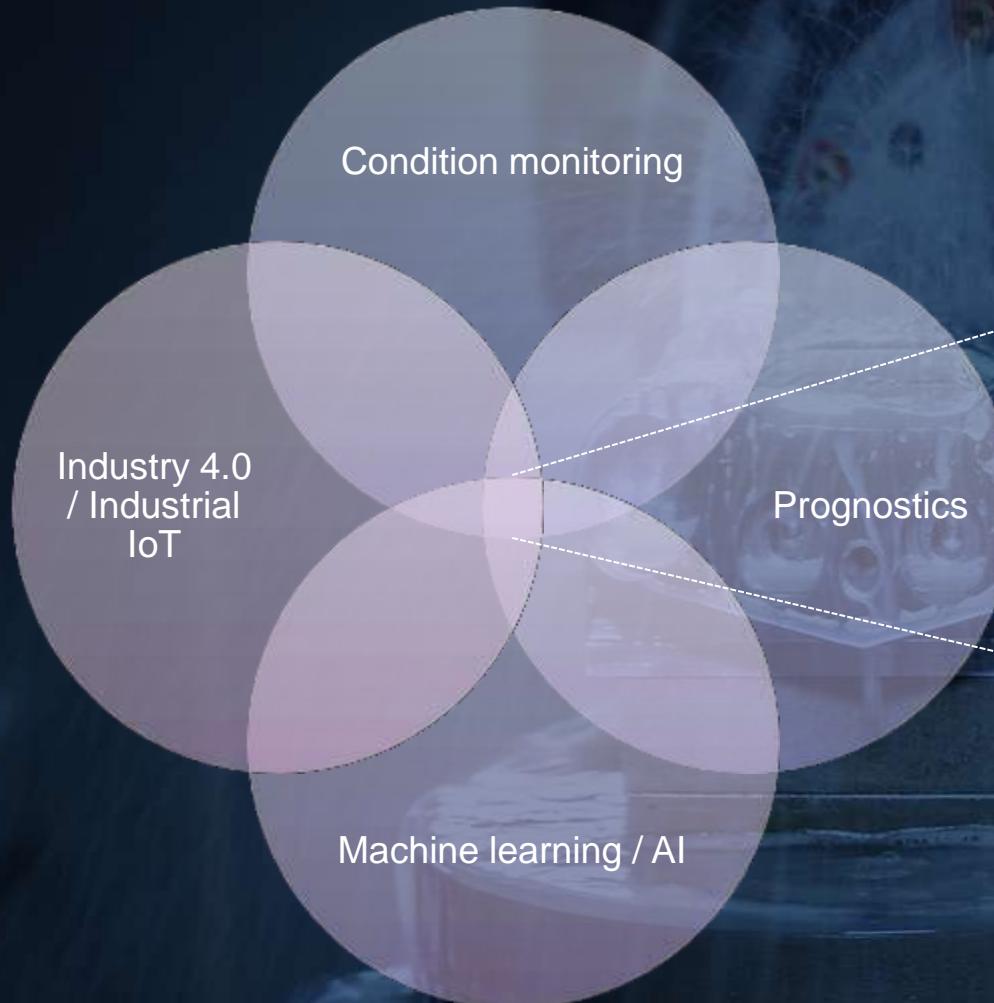

**senseye**

# Scalable Predictive Maintenance

---

Reduce unplanned downtime and maximize OEE with Senseye, the ultimate cloud-based predictive maintenance application

# technology: convergence

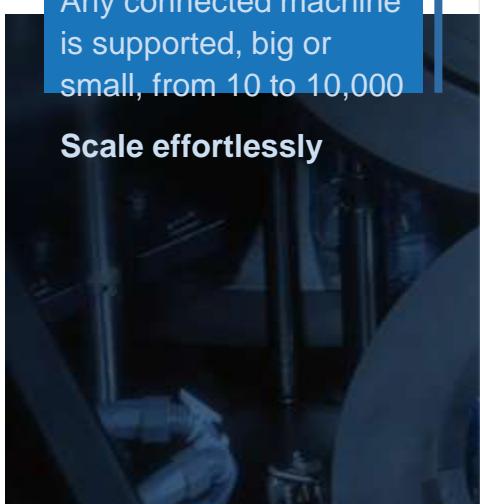

senscye

## Any & many

Any connected machine is supported, big or small, from 10 to 10,000

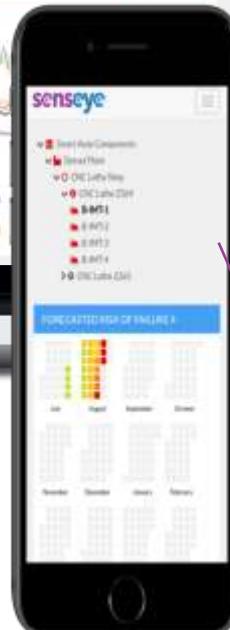

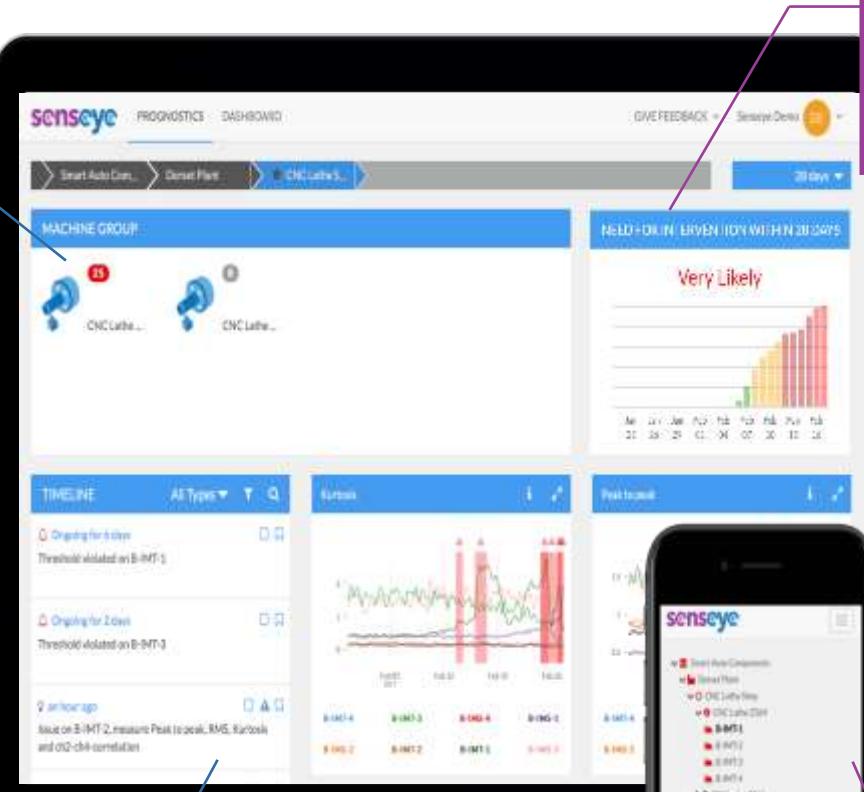

Scale effortlessly

## Condition Monitoring

Automated condition monitoring insights, only relevant information is highlighted.

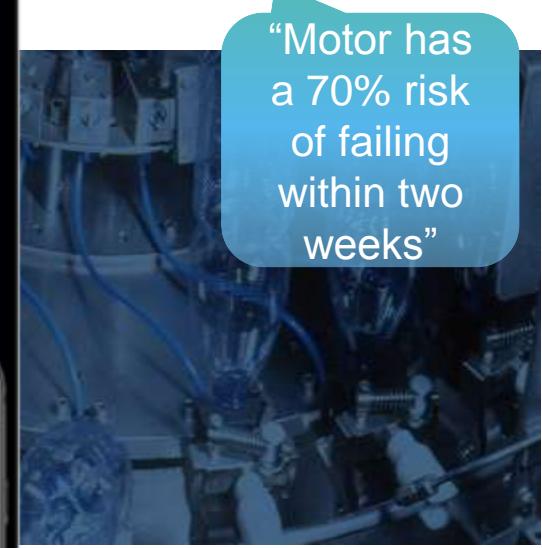

Takes the pain out of asset management

## Remaining Useful Life

Understand for how long your machinery is likely to perform

Improved predictive maintenance

"Motor has a 70% risk of failing within two weeks"

## Web based

Nothing to install or maintain, powered by the cloud and accessible on all devices.

No infrastructure to support

# it's: automated

Cloud based product

Get started right away!

Scalable

From tens to thousands of machines

Know-how

Embedded mechanical knowledge

Prognostics

The only product to give Remaining Useful Life

Easy to use

No technical knowledge necessary

Zero-touch

No configuration needed!

Senseye helps you to avoid downtime and s

# Automotive OEM

## CASE STUDY

### CHALLENGE

A major automotive OEM was embarking on a Condition Based Maintenance programme to help to avoid downtime on the production line, *reducing it by up to 50%*. They were attracted to Senseye by their strong prognostics offering underpinned by machine learning.

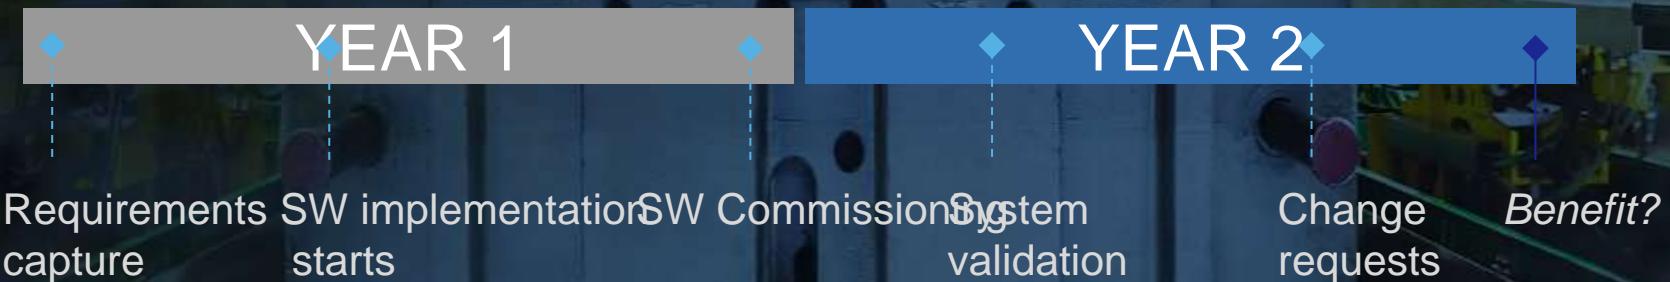

### RESULTS

Senseye works with the OEM by integrating data taken from the factory floor. Identifying anomalies and trends used to forecast machine failure and predict Remaining Useful Life, *automatically*.

- Increased value proposition of their condition

# why: Senseye

Traditional predictive maintenance project:

SW costs alone > £500k + dedicated experts to use it

**senseye**

Connect to data  
*Information in 14 days*  
No customization needed

  - Links with centres of excellence (e.g. universities);
  - Information on tax, regulatory and business planning issues;
  - Information on financial incentives;
  - Information on staff recruitment, retention and training programmes;
  - Assistance with immigration issues

# There are many reasons for which UK is the top investment destination

## Vast market opportunity

- 6th largest economy in the world
- Excellent international accessibility
- Robust infrastructure

## Favourable business environment

- Enterprise zones
- Ease of set-up and operation
  - Language
  - Stable business environment & efficient legal system

## High quality of life

- High standard of living, appreciated by relocating international executives
- Rich cultural heritage easily accessible language-wise

## Easy access to talent

- 4 of the world's top ten universities
- Strong research base
- Educated & flexible workforce

## Attractive tax regime

- Reduction of corporation tax to 17% by 2020
- Most competitive tax regime in G20
- R&D tax credits, Patent Box

# Access to Talent from Top Universities

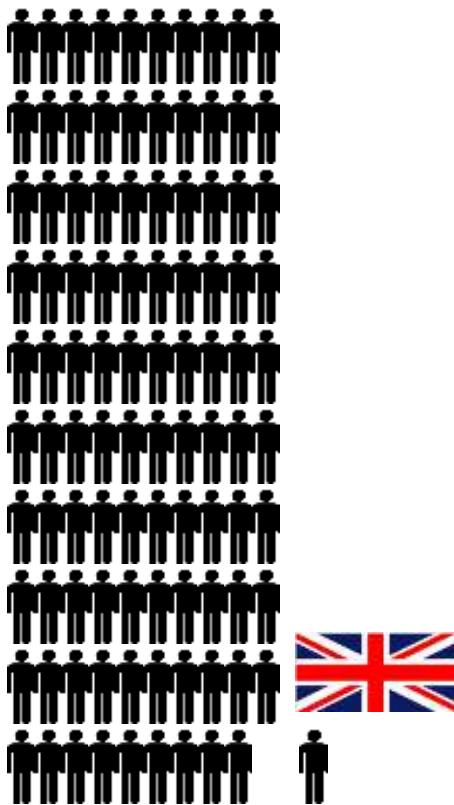

The UK is home to 6 of the top 8 universities in Europe

Shanghai Global Ranking 2017	University	Country
3	University of Cambridge	UK
7	University of Oxford	UK
16	University College London	UK

# TECH NATION 2017

AT THE FOREFRONT  
OF GLOBAL DIGITAL  
INNOVATION

From

FOREWORD

# TECH NATION 2017

@TechCityUK  
#TechNation  
[techcityuk.com/technation](http://techcityuk.com/technation)

THE RT HON THERESA MAY, MP  
THE PRIME MINISTER

Today more than 1.5 million people are already working within the digital sector, or in digital tech roles across other sectors, while the number of digital tech jobs across the UK has grown at more than twice the rate of non-digital tech sectors. From analysts to web developers to software architects, these pioneers of our digital economy are at the forefront of a great British success story.

Britain already leads the world when it comes to new technology. We make more contactless payments than anywhere else and we help to lead the way in everything from FinTech to Artificial Intelligence. We are natural innovators, eager to incorporate the latest innovations into our lives.

As Prime Minister I am determined that we will build on this success as we seize the opportunities that arise from leaving the EU and seek to build a bold new future for our country. That is why support for the digital tech sector is an important element of the government's modern industrial strategy, helping to deliver a high-skilled, high paid Britain where opportunity is spread across every community, not just the traditional areas of London and the South East.

Through close co-operation between government and our tech industry we will help to ensure that Britain remains one of the most competitive places in the world to start and grow a tech business. We will expand the scope of our digital tech industries, funding Artificial Intelligence, robotics, 5G, smart energy and more. We will broaden their reach across the UK, create new Institutes of Technology, and reinvigorate STEM and digital education to equip young people for the workplaces of the future.

In doing so, we will also take an important step in helping to build a future in which everyone - from every background and every part of the country - has the skills and support to reach their full potential. Every entrepreneur, every innovator and every employer in the tech sector and beyond can play a huge part in this, helping to build a country that truly does work for everyone.
