Project Purpose (use the exact wording from the approved Project Proposal Form)

To design a set of strategies by March 2016 that will help the state of Tabasco develop human capital required to fulfill future market demands in the oil & gas industry (O&G).

Was the Purpose achieved? If not, give reasons. Please state your sources of information

Yes, it was. The representative of the British Embassy and the officials of the Education and Energy Secretariats attending the meeting in which the programme was delivered, expressed that the document fulfilled their expectations. For the Secretary of Energy, the programme is an important contribution in the sense that it integrates relevant information regarding the quality and quantity of human resources required by the oil industry, in a medium term. For the Education Ministry, it was important that the document provided a complete diagnostic regarding the education required by the industry. The minister considered it was specially valuable that information from a wide range of sources and stakeholders was taken into account to develop the strategy.

The programme was particulary helpful for the Mexican government because it represented a useful tool to face one of the main challenges posed by the energy reform, namely, the need to train adequate human resources for the industry.

For all of the involved stakeholders, an important feature of the Programme was the feasibility of the strategy proposal.

Were any significant changes to the project design agreed with Post and put in place (outputs, activities, budget, duration etc.) Please describe the changes.

There were no changes.

Did any external factors contribute to the achievement of the Purpose? Please describe

The collaboration with the Energy and Education Ministries of the Government of Tabasco was a factor that significantly favoured the development of the project. Their disposition to collaborate arose from the fact that they viewed the Cluster as an experienced and professional organization which approach appropriately included government agencies, academic institutions, research centres and oil companies. This was considered important to enhance the Programme's feasibility.

Please describe any unplanned consequences from the project

Both the education institutions and the Government of Tabasco now have the profiles of an important number of oil industry occupations. The profiles were organized sistematically and were aligned to the interests of the Asociación de Recursos Humanos de la Industria Petrolera (Human Resources Association of the Oil Industry, ARHIP).

Were all the Milestones / Indicators of Success met or achieved as planned, with the planned results? If yes, please note the results. If not, please explain

Was the project com	pleted on Bud	get?		
Planned total Cost		Actual Total Cost	Variance (difference	
			planned and actual co	osts)
£ 67,962		£ 63,502.96	£4,459.44	

Please explain any variance in planned and actual expenditure, where the difference is greater than 5%

Actual cost was less than planned because flights and meetings costs were overestimated.

What evidence do you have that the benefits of the project will be sustained? Please describe

The Government of Tabasco has stated its commitment to implement the Programme shortly. As a matter of fact, the Cluster elaborated a proposal to obtain resources from the CONACyT-SENER fund to carry the stratefy forward. The proposal is presently being analyzed by the state government.

What were the three main lessons identified that could be applicable to running this type of project again?

1. Including all the stakeholders (academic institutions, government agencies, research centres and oil companies, in this case) in the various stages of the programme ellaboration is critical to obtaining relevant information, yielding an integrated approach and designing feasible strategies.

- 2. It was very convenient that the project's objectives were akin to those of the Strategic Programme of Human Resources Training for the Energy Sector, of the Federal Government. This would support the engagement from the Federal Energy Ministry to the project's implementation.
- 3. It is very important to have a local liaison with decision making and convening capacities, to facilitate communication and speed up task completion.

We would welcome your feedback and comments on FCO procedures and systems in relation to the project

We think that FCO procedures and systems are appropriate.
