Reference Proposed Applications for Llanbrynmair and Carnedd Wen Wind Farms

Dear Sir / Madam,

I wish to strongly object to these proposed wind farm applications.

Although I am now well into my 80's, I was from a farming family and brought up to value and care for our countryside. Although I am old now, these feelings still run very deep. My son's family live on a farm in Montgomeryshire and have been blighted by these proposals for some years now. Such developments and their distribution infrastructure would ruin the beautiful landscape of Mid Wales. It is therefore essential we all consider the full and long term impact of these proposals, not just a wind farm planning application in isolation.

The total impact would be significant if even more applications continue to go through; a landscape covered with wind turbines seen for many miles, a substantial 400Kv National Grid line travelling across upland areas and down valleys to reach existing lines in England and the movement of equipment and turbine parts for years to come on roads that cannot cope with the summer traffic now!

Surely, our Government should listen to the local people of Mid Wales who have made it quite clear that they strongly object to these developments. Surely, our Government should be taking a different approach to generating electricity in Great Britain by:

- Promoting further the generation of electricity locally through households generating their own power and supplying the local network when individual needs are met.
- Investing in new technology that can generate electricity safely and cleanly - after all wind turbines are very 'old hat' and totally inefficient (this has been documented over the past few years) so why pursue something that cannot meet our needs?

Please reject these planning applications on the grounds stated above.

Please reply to confirm you have received this email.

Yours faithfully,
