## Annex F

## Social Integration survey output

## Social Integration survey

This Annex presents outputs from the baseline and follow-up social integration survey not presented in the main CBEL RCT report.

The Annex sets out below the headline survey results at baseline and follow-up. The results are presented with the baseline results in the left hand columns, and follow-up data in the right hand columns

## Cross-tabulations of survey question

Below are cross-tabulations for each question in the survey by condition assignment (treatment and control) for both waves of the survey. The tables present the raw data, and include the number and rate of respondents who did not know, did not provide, or refused to answer.

The columns to the left are the results of the baseline survey, with the follow-up results on the right. The base is given in the top row of each question. For all but one question, the base was all respondents to the survey. The base for question 10 is for all those with children (collected in question 9).

All percentages have been rounded to the nearest whole number. In some instances, where very low numbers are reported, percentages have been rounded down to zero. In such instances, $\mathrm{a}^{\dagger}$ indicates that though the reported rate is zero, there were some (though very few) responses within the relevant cell. The more accurate rate for these cells would be equal to or less than 0.5 per cent

Table Q1. Apart from your English class, how many people did you speak to last week using English?

|  | Baseline |  |  | Follow-up |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Treatment | Control | Total | Treatment | Control |
