About these statistics

This is a National Statistics publication produced by HM Revenue and Customs (HMRC). For more information on National Statistics and governance of statistics produced by public bodies please see the UK Statistics Authority website (www.statisticsauthority.gov.uk).

The tables in this publication provide detailed breakdowns of individuals liable to UK income tax (taxpayers) and their incomes using sample based estimates.

New or updated statistics in this release

2015-16 SPI

These statistics were published on 28 March 2018. The tables are derived from the annual Survey of Personal Incomes (SPI). They provide information on taxpayer incomes for sub-UK geographical areas and are consistent with Tables 3.1 to 3.11 and the associated statistical release that was published on 6 March 2018.

2016-17 SPI

National Statistics from SPI survey data for 2016-17 are expected to be released in February 2019. In accordance with the Code of Practice for Official Statistics, the exact date of publication will be given not less than one calendar month before publication on both the HMRC website and Office for National Statistics publication hub.

Delay to the 2008-09 SPI

The 2008-09 SPI is still unavailable but HMRC remains committed to producing the 2008-09 SPI and National Statistics Tables 3.1 to 3.15a for 2008-09 and will announce their publication dates as soon as they have been confirmed.

SECTION 1: Introduction and background information

What is the Survey of Personal Incomes?

The Survey of Personal Incomes (SPI) is based on information held by HMRC on individuals who could be liable to UK income tax. It is carried out annually by HMRC and covers income assessable to tax for each tax year.

Uses of the SPI

The SPI is compiled to provide a quantified evidence base from which to cost proposed changes to tax rates, personal allowances and other tax reliefs for Treasury Ministers. It is used to inform policy decisions within HMRC and the Treasury, as well as for tax modelling and forecasting purposes. In addition, it is used to provide summary information for the National Accounts that are prepared by the Office for National Statistics. Finally, it is used to provide information to Members of Parliament, other Government Departments, companies, organisations and individuals.

Sample Design

HMRC holds information about individuals who could be liable to UK income tax in three operational computer systems.

1. The National Insurance and PAYE Service (NPS) system covers all employees and occupational pension recipients with a Pay-As-You-Earn (PAYE) record. NPS replaced the Computerisation of PAYE (COP) system.
2. The Computerised Environment for Self Assessment (CESA) system covers people with self-employment, rental or untaxed investment income. It also covers those with higher incomes and other people with complex tax affairs. Where people have both NPS and CESA records, their CESA record is selected because it provides a more complete picture of their taxable income.
3. The Claims system covers people without NPS or CESA records who have had too much tax deducted at source and claim a repayment.

Separate samples are drawn from each of these systems and then joined together to create the SPI.

For more information about how the SPI is constructed, its coverage and methodological changes from previous SPIs please see Annex B.

What does this publication tell me?

The statistics in this publication expand on the results already published in Tables 3.1 to 3.11 and focus on estimates for sub-UK regional, administrative and political geographical areas, plus measures of precision for those estimates. The estimates are for individuals liable to UK income tax and their geographical area of residence.

Tables are based on a sample of administrative data for the relevant tax year. Tax liabilities are modelled using the HM Revenue and Customs Personal Tax Model. Methods used to calculate income tax liabilities are described in Annex B of the latest Income Tax Liabilities Statistics bulletin, available at: <https://www.gov.uk/government/collections/income-tax-statistics-and-distributions>.

Who might be interested?

These tables would be of interest to policy makers in government, academics, journalists, think tanks, and other research bodies. They would be of use to individuals or organisations interested in the distributions of numbers and amounts of personal incomes, for example by taxpayer marginal rate or income band. Users may also like to view the tables on Income Tax Liabilities which are available at: <https://www.gov.uk/government/collections/income-tax-statistics-and-distributions>.

User engagement

We are committed to providing impartial quality statistics that meet our users' needs. We encourage our users to engage with us so we can improve our official statistics and identify gaps in the statistics that we produce.

Comments or queries on these statistics can be sent to the statistical contacts named at the end of this section. We will review user comments on a quarterly basis and use this information to influence the development of our official statistics. We will summarise and publish user comments at regular intervals. <https://www.gov.uk/government/organisations/hm-revenue-customs/about/statistics#contact-us>

Publication and revision strategy

These statistics are published annually, usually in January/February. Release dates will be announced on the UK Statistics Hub and the HMRC National Statistics website ([Schedule of updates for HMRC's statistics](#)).

Any delays to the publication date will be announced on the HMRC National Statistics website ([Schedule of updates for HMRC's statistics](#)).

Statistical contacts

SECTION 2: Personal Incomes statistics

The statistics in Section 2 provide analyses of the incomes of UK taxpayers and the income tax to which they are liable for the 2015-16 tax year based on Tables 3.12 to 3.15a in Annex A. These tables are derived from the annual Survey of Personal Incomes where the latest tax year is 2015-16. Data sources and methods are described in more detail in Annex B.

Summary of key statistics

Tables 3.12 to 3.15a provide further geographical breakdowns to tables 3.1 to 3.11 which were published in March 2017. The key findings for 2015-16 are:

- There were 31.0 million individual income taxpayers; 17.8 million were male and 13.2 million were female (Table 3.2).
- Total income was approximately £1,040 billion and the total tax liabilities were around £178 billion (Table 3.3).
- Taxpayers of pension age account for 22% of all taxpayers and 17% of total income (Table 3.12).
- The South East has the highest number of taxpayers of pension age and the largest amount of total income (1,100 thousand and £31.6 billion respectively). Northern Ireland has the fewest taxpayers of pension age and the lowest amount of total income (134 thousand and £3.31 billion respectively) (Table 3.12).
- London was the region with the highest mean and median values for total income, £46,700 and £27,200 respectively (Table 3.13).

Note that individual figures have been rounded independently to three significant figures. Therefore, the sum of component items in the tables may not necessarily add to the totals shown.

Table 3.12 – Income and tax for individuals of pension age, by gender, region and country, 2015-16

Taxpayers only

This table shows the sources of income that comprise total income and income tax for taxpayers of pension age by gender, region and country.

The female State Pension Age is being increased gradually from April 2010 to be equalised with the male State Pension Age by November 2018. Therefore, the female State Pension Age for the purposes of these statistics is 63.0 years old in April 2016.

The numbers of taxpayers, amounts of total income and tax at the higher end of the income distribution will have been affected by behavioural responses to changes in the taxation of dividend income which came into force in April 2016. More information about this change is available from this [Income Tax Policy paper](#) and estimates of the size of the behavioural response is available from the Office for Budget Responsibility's [November 2017 Economic and Fiscal Outlook](#).

Table 3.12 shows that taxpayers of pension age account for 6.87 million (22%) of all taxpayers and £176 billion (17%) of total income. Of the taxpayers of pension age, 3.87 million (56%) were male, and they accounted for £110 billion (63%) of total income for this group.

Figure 2.25 shows that the South East had the highest number of taxpayers of pension age (1,100,000). In contrast, Northern Ireland had the lowest number of taxpayers of pension age (134,000).

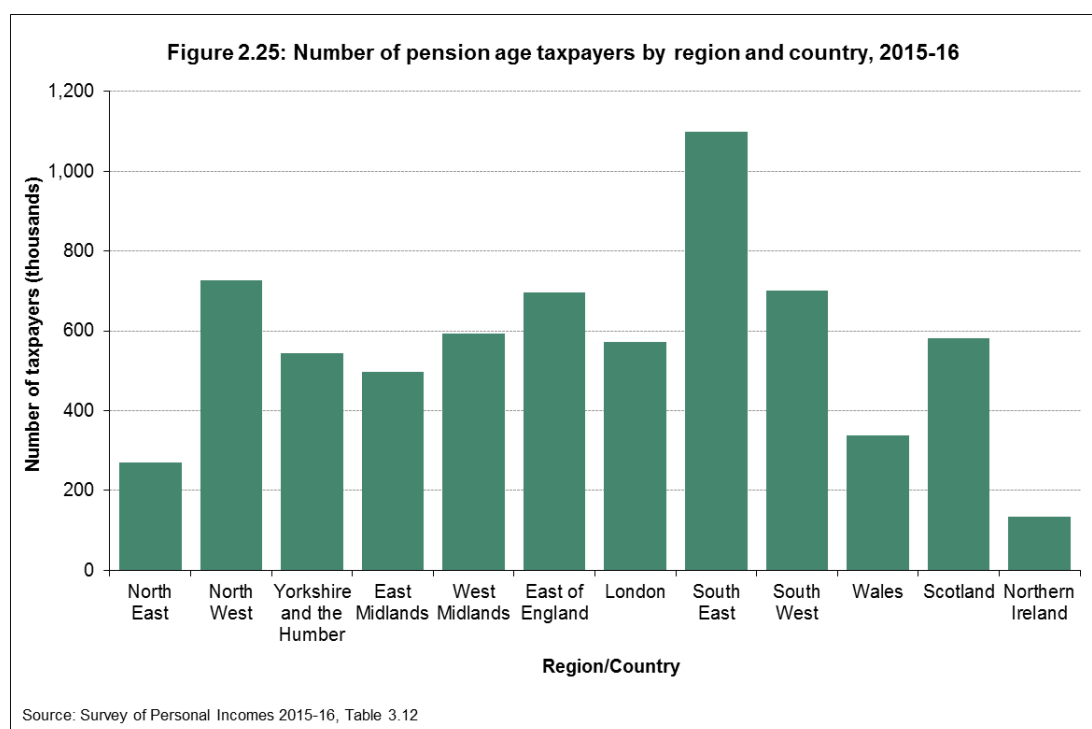

Figure 2.26 shows that the South East had the highest amount of total income from taxpayers of pension age (£31.6 billion). Northern Ireland had the least total income (£3.31 billion).

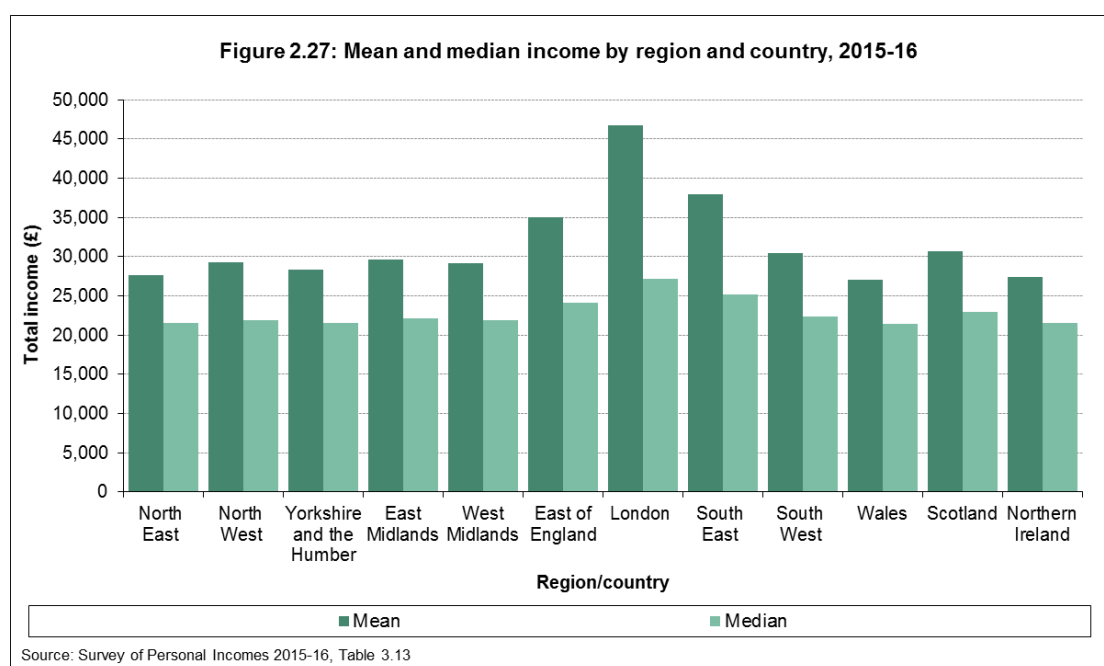

Table 3.13/a – Income and tax by county and region, 2015-16 Taxpayers only

This table provides estimates of mean and median values of income by type, total income and total tax for taxpayers resident in the UK and in each country, region and county.

The numbers of taxpayers, amounts of total income and tax at the higher end of the income distribution will have been affected by behavioural responses to changes in the taxation of dividend income which came into force in April 2016. More information about this change is available from this [Income Tax Policy paper](#) and estimates of the size of the behavioural response is available from the Office for Budget Responsibility's [November 2017 Economic and Fiscal Outlook](#).

Figure 2.27 shows that for regions, London had the highest mean income (£46,700), followed by the South East (£37,900) and the East of England (£35,000). London also had the highest median income (£27,200), followed by the South East (£25,200) and the East of England (£24,100).

At region level, Table 3.13 shows that the highest mean and median values for total tax, £10,500 and £3,090 respectively, are found in London.

At county level, the highest mean values for total income are found in Surrey (£49,800), Buckinghamshire (£46,900) and Hertfordshire (£42,700). The highest median values for total income are found in Surrey (£29,200), Buckinghamshire (£28,100) and Hertfordshire (£27,300).

The highest mean and median values for total tax, £11,400 and £3,350 respectively, are found in Surrey.

These values are sample based estimates; confidence intervals at the 95% level are available in Table 3.13a. For more information on estimates and measures of precision see Annex B.

Table 3.14a – Income and tax by borough and district or unitary authority, 2015-16
Taxpayers only

This table provides estimates of mean and median values of income by type, total income and total tax for taxpayers resident in each country, region, borough and district or unitary authority.

On the 1st April 2015, 11 new districts were established in Northern Ireland to replace the 26 districts that had been in place since 1973. The 2015-16 SPI is the first SPI to reflect this change.

For districts and unitary authorities, Table 3.14 shows that the highest mean values for total income are found in Kensington and Chelsea (£178,000), the City of London (£142,000) and Westminster (£109,000). The highest median values for total income are found in the City of London (£60,000), Westminster (£37,800) and Kensington and Chelsea (£37,500).

The highest mean value for total tax, £61,200, is found in Kensington and Chelsea while the highest median value for total tax, £11,500, is found in the City of London.

These values are sample based estimates; confidence intervals at the 95% level are available in Table 3.14a. For more information on estimates and measures of precision see Annex B.

Table 3.15/a – Income and tax by parliamentary constituency, 2015-16
Income Tax-payers only

This table provides estimates of mean and median values of income by type, total income and total tax for income tax-payers resident in each country, region and parliamentary constituency.

At parliamentary constituency level, Table 3.15 shows that the highest mean values for total income are found in Kensington (£166,000), Chelsea and Fulham (£133,000) and Cities of London and Westminster (£130,000). The highest median values for total income are found in the Cities of London and Westminster (£44,300), Richmond Park (£37,900) and Chelsea and Fulham (£37,200).

The highest mean value for total tax, £56,700, is found in Kensington while the highest median value for total tax, £6,090, is found in the Cities of London and Westminster.

These values are sample based estimates; confidence intervals at the 95% level are available in Table 3.15a. For more information on estimates and measures of precision see Annex B.

Parliamentary constituency refers to Westminster Parliamentary Constituencies.

Annex A: National Statistics Tables 3.12 to 3.15a, 2015-16

Notes on the tables

In all of the tables in this section, the following conventions have been used:

Symbol	Definition
..	Not available, due to small sample size
-	Negligible
.	Not applicable

Individual figures have been rounded independently to three significant figures. Therefore, the sum of component items may not necessarily add to the totals shown.

Source: Survey of Personal Incomes 2015-16
Table updated March 2018

Footnotes

(a) The female State Pension Age is being increased gradually from April 2010 to be equalised with the male State Pension Age by November 2018. The State Pension Age for the purposes of this table is aged 63 years old for females and aged 65 and over for males as at 5 April 2015.

Notes on the Table

1. Estimates for sub-UK geographical areas (eg by country, region, county etc) should be treated with particular caution. (see Personal Incomes Statistics release Annex B)

2. This table shows the same components of income and tax as table 3.11, but for taxpayers of pension age. Information has been presented on a region basis for England. The self employment counts are based on the same definition as used in the table 3.6. The notes to table 3.11 also apply to this table.

3. Self employment income is profit chargeable under the Income Tax (Trading and Other income) Act 2005 less losses brought forward and capital allowances allowed. The number of individuals with self employment income shown in this table is lower than that shown in Table 3.10. In this table only individuals who are liable to tax in 2015-16 are included, whereas Table 3.10 includes all people with a self employment source in 2015-16. Employment income includes all pay from employment, from taxable benefits and from unemployment benefit, income support or Jobseeker's Allowance. In previous years we have used as our definition of self-employed, those who have non-zero profits, capital allowances or losses brought forwards. From 2003-04 we have changed the definition to encompass all taxpayers who have a self-employment source.

4. Incomes are allocated to regions and countries according to the residence of the recipient. The postcode has been used to determine the county and hence the region for the overwhelming majority of cases. Some members of the Forces and Merchant Navy, together with a small number of people serving overseas and people with overseas addresses have not been allocated to regions, but have been included in the UK figures. There are also a small number of people in the sample where it was not possible to identify their postcode and therefore identify the correct region. These have also been included in the UK figures. This explains why the regional amounts do not add up to the UK total.

3.13

Income and tax by county and region, 2015-16

Taxpayers only

Source: Survey of Personal Incomes 2015-16

Table updated March 2018

Notes on the Table

- Estimates for sub-UK geographical areas (eg by country, region, county etc) should be treated with particular caution (see Personal Incomes Statistics release Annex B).
- The notes to Table 3.11 also apply to this table. The self-employment counts are based on the same definition as used in Table 3.6. This table gives mean and median measures for total income and two of its major components and total tax for each borough and district or unitary authority. Generally in the income columns the mean is higher than the median because comparatively few people have incomes that are significantly above the average. An average for a type of income (i.e. employment income) can be larger than the average total income as it only relates to those individuals who have income of that type.
- Self employment income is profit chargeable under the Income tax (Trading and Other Income) Act 2005 less losses brought forward and capital allowances allowed. The number of individuals with self employment income shown in this table is lower than that shown in Table 3.10. In this table only individuals who are liable to tax in 2015-16 are included, whereas Table 3.10 includes all people with a self employment source in 2015-16. Employment income includes all pay from employment, from taxable benefits and from unemployment benefit, income support or Jobseeker's Allowance. In previous years we have used as our definition of self-employed, those who have non-zero profits, capital allowances or losses brought forwards. From 2003-04 we have changed the definition to encompass all taxpayers who have a self-employment source.
- Incomes are allocated to regions and countries according to the residence of the recipient. The postcode has been used to determine the county and hence the region for the overwhelming majority of cases. Some members of the Forces and Merchant Navy, together with a small number of people serving overseas and people with overseas addresses have not been allocated to regions, but have been included in the UK figures. There are also a small number of people in the sample where it was not possible to identify their postcode and therefore identify the correct region. These have also been included in the UK figures. This explains why the regional amounts do not add up to the UK total.
- On the 1st April 2015, 11 new districts were established in Northern Ireland to replace the 26 districts that had been in place since 1973. The 2015-16 SPI is the first SPI to reflect this change.

3.14a Income and tax by borough and district or unitary authority, 2015-16 - Confidence Intervals

Source: Survey of Personal Incomes 2015-16

Table updated March 2018

Notes on the Table

- Estimates for sub-UK geographical areas (eg by country, region, county etc) should be treated with particular caution (see Personal Incomes Statistics release Annex B).
- Parliamentary constituency refers to Westminster Parliamentary constituencies.
- The notes to Table 3.11 also apply to this table. The self-employment counts are based on the same definition as used in Table 3.6. This table gives mean and median measures for total income and two of its major components and total tax for each parliamentary constituency. Generally in the income columns the mean is higher than the median because comparatively few people have incomes that are significantly above the average. An average for a type of income (i.e. employment income) can be larger than the average total income as it only relates to those individuals who have income of that type.
- Self employment income is profit chargeable under the Income Tax (Trading and Other Income) Act 2005 less losses brought forward and capital allowances allowed. The number of individuals with self employment income shown in this table is lower than that shown in Table 3.10. In this table only individuals who are liable to tax in 2015-16 are included, whereas Table 3.10 includes all people with a self employment source in 2015-16. Employment income includes all pay from employment, from taxable benefits and from unemployment benefit, income support or Jobseeker's Allowance. In previous years we have used as our definition of self-employed, those who have non-zero profits, capital allowances or losses brought forwards. From 2003-04 we have changed the definition to encompass all taxpayers who have a self-employment source.
- Incomes are allocated to regions and countries according to the residence of the recipient. The postcode has been used to determine the county and hence the region for the overwhelming majority of cases. Some members of the Forces and Merchant Navy, together with a small number of people serving overseas and people with overseas addresses have not been allocated to regions, but have been included in the UK figures. There are also a small number of people in the sample where it was not possible to identify their postcode and therefore identify the correct region. These have also been included in the UK figures. This explains why the regional amounts do not add up to the UK total.

Source: Survey of Personal Incomes 2015-16
Table updated March 2018

Notes on the Table

1. The notes to the table 3.15 apply to this table.

Annex B: Data sources and Methodology

The data sources and methods used to compile statistics in this release are set out below.

The tables in this publication are derived from the annual Survey of Personal Incomes (SPI).

The SPI is a sample survey which is based on information held by HMRC on persons who could be liable to UK income tax for the income tax year. It is carried out annually and covers the income assessable for tax in each tax year. The tables in this publication are based on the surveys for 2015-16 and earlier.

Samples were selected from three HMRC operational computer systems, which are as follows:

1. The National Insurance and PAYE Service (NPS) system covers all employees and occupational pension recipients with a Pay-As-You-Earn (PAYE) record.
2. The Computerised Environment for Self Assessment (CESA) system covers people with self-employment, rental or untaxed investment income. It also covers directors, those subject to higher rate tax and other people with complex tax affairs. Where people have both NPS and CESA records, their CESA record is selected because it provides a more complete picture of their taxable income.
3. The Claims system covers people without NPS or CESA records who have had too much tax deducted at source and claim a repayment.

Separate samples were drawn from each of these systems and different sampling strategies were used for each. The samples were structured as follows:

(a) The PAYE population from NPS was stratified by gender and by the sum of pay plus occupational pension income for the previous tax year. Where the previous year's income was not available cases were stratified by gender and by whether they were a higher rate or additional rate taxpayer for the current tax year based on information available at the time the sample was drawn. The sampling fractions varied from 1 in 10 for individuals with high incomes and rare allowances to about 1 in 258 for people with low combined pay and pensions. In all, about 410,000 individuals were selected from NPS for inclusion in the 2015-16 SPI.

(b) For the SA population from CESA, the main source of income (self employment or employment/occupational pension) and ranges of income and tax were used to stratify the sample, with the sampling fraction varying from 1 in 1 for cases with very high income or tax up to about 1 in 264 for employees and occupational pensioners with smaller income or tax for 2015-16. In all, about 322,000 individuals were selected from SA for inclusion in the 2015-16 SPI.

(c) For claims cases, a random sample of about 1 in 11 was selected for inclusion in the SPI. This led to around 12,900 cases being selected for the survey.

Once data was collected for the three constituent parts of the sample, the data sets were joined together. After allowing for non-response and for records that failed data validation tests, there were about 745,000 valid cases on the 2015-16 final SPI file.

Coverage of the SPI

Not all of the individuals in the SPI sample are taxpayers. About 22 per cent have no income tax liability because deductions and reliefs and personal allowances exceed their total income. Where income exceeds the threshold for the operation of PAYE (£10,600 for 2015-16), the SPI provides the most comprehensive and accurate official source of data on personal incomes. However, as HMRC does not hold information for all people with personal incomes below this level, the SPI is not a representative data source for this part of the population and no attempt has been made to estimate the numbers of cases below the tax threshold or the amount of their incomes.

Therefore the National Statistics in this and our earlier publication - with the exception of Tables 3.9 and 3.10 - only cover individuals liable to UK income tax (taxpayers) and their incomes.

An individual with income below the personal allowance can still be a taxpayer in some circumstances. This can arise where individuals who have income liable to UK tax do not qualify for a personal allowance under the residence and/ or domicile rules. Some people who do qualify for the personal allowance choose to give up their personal allowance as part of the qualifying conditions for having their income taxed under the "remittance basis". These taxpayers may only have a small amount of income liable to UK tax (i.e. below where the personal allowance is set), but this income is still liable to tax and is charged at the starting, and/ or basic rates.

Most sources of income are liable for income tax and adding all these sources together will give an individual's total income assessable for tax for the tax year. There are some sources of income that are not liable for tax. As they do not contribute towards an individual's taxable income, they are excluded from the SPI; these sources include some social security benefits and income from some tax efficient savings vehicles (e.g. Individual Savings Accounts and some National Savings & Investment products).

Capital Gains arising from the disposal of assets are subject to Capital Gains Tax (CGT) and are not treated as income for income tax purposes, so gains from the disposal of assets are not included in the SPI.

The coverage of investment income for the sample drawn from NPS is incomplete. This is because in order to operate the PAYE system for most individuals HMRC does not need information on interest from which tax has been deducted at source, nor on dividends and associated tax credit. In order to create a full picture of total income for this survey, it is necessary to impute values of bank and building society interest and dividends to some sample cases.

For interest and dividends imputation, the amount for each SPI case:

- is known for cases in Self Assessment from the amount declared on the Self Assessment Return
- can be inferred or estimated reasonably for NPS cases where there is an adjustment to the tax code for higher rate taxpayers
- is supplemented with information from interest paying institutions
- is unknown for NPS cases where there is no coding adjustment - typically no liability at the higher rate.

Where no information at case level is available from HMRC administrative systems, estimated values are imputed to cases so that the population as a whole has amounts consistent with evidence from other sources (for example, amounts of tax accounted for by deposit takers and the propensity to hold interest bearing accounts as indicated by household surveys).

For interest income, starting from control totals at UK level, for the number of cases with interest and the total amount of that interest, the numbers of cases and amounts of interest in Self Assessment cases and those NPS cases with coding adjustments are deducted to leave targets for the remainder of the taxpayer population. These targets are at UK level – no attempt is made to control the targets to sub-UK geographical units. The cases to which amounts are attached by the imputation process and the amounts attached are determined by probabilistic methods with just the UK targets and distributions in mind. For dividend income, the number of non SA cases with dividend income and distribution of imputed amounts were inferred from Family Resources Survey data for 2015-16.

As with investment income, HMRC does not have complete information about superannuation or personal pension contributions.

Under PAYE, tax is paid on pay after the deduction of superannuation contributions and therefore HMRC does not need to record the contributions deducted from gross pay. For a small proportion of individuals, the superannuation contribution has been taken directly from an end of year return submitted by employers. For others, their total amount of superannuation contributions has been estimated and has been distributed among earners in the SPI sample, based on information from the Annual Survey of Hours and Earnings produced by the Office for National Statistics.

Relief at basic rate is given at source for employee contributions to personal pensions. As this is the correct amount of relief for basic rate taxpayer employees, HMRC does not need to collect personal pensions data for this group of taxpayers. To compile complete estimates for personal pensions and total income for the SPI, a significant proportion of the amount of personal pension contributions has been imputed using data from external data sources. The estimated value for this and for superannuation contributions has been combined with other pension reliefs and included in these statistics.

Estimates and measures of precision

Population and sample design

The SPI aims to cover all individuals with a UK income tax liability. The sample drawn from HMRC operational computer systems will include some cases where income is less than allowances so no tax liability arises. The section above explains how the records in each operational computer system are grouped (stratified) before the sample is selected. A random sample of records is drawn from each grouping (stratum) – the proportion of cases selected varies from stratum to stratum.

Reliability of estimates

As with all sample surveys, estimates from the SPI have a sampling error attached to them. A statistic (e.g. an estimate of a mean or a total from a random sample) will be subject to sampling variation – its value will vary from one sample to the next if repeated random samples are drawn. The Standard Error of the statistic measures the extent of the variability. It reflects how much spread exists in the observations from the sample and the size of the sample.

In general, the larger the sample size, the smaller the Standard Error. To a lesser extent, the standard error of the statistic will decline as the proportion of the population surveyed increases, but only by taking measurements for the whole population can sampling error for the statistic be removed entirely.

A Confidence Interval for the statistic is constructed from the Standard Error. It gives an estimated range of values which is likely to include the estimated population size statistic. If independent samples are taken repeatedly from the same population and the Confidence Interval is calculated for each sample, then a proportion (known as the Confidence Level) of such intervals will include the unknown population parameter.

A 95% Confidence Interval is one that if compiled repeatedly would encompass the population parameter 19 times in 20. For a given sample size, narrower intervals can be compiled if a greater risk of failing to encompass the true population value is acceptable, whereas if greater certainty of including the true value is required, the interval will be wider.

The Upper and Lower boundaries of the Confidence Interval are called the Confidence Limits. They are a function of the statistic, the Standard Error of the statistic and the degree of confidence required of the interval.

The calculation of sampling errors assumes a simple random sampling method but can be extended to more complex sample designs. The sample for the SPI, as described earlier, is selected using a stratified sample.

Precision of estimates: sub UK areas

The population is not stratified by geographical area before the SPI sample is selected. Estimates of taxpayer numbers for low level geographical areas of the UK depend on measuring the proportion of the UK population which belong to the area. Typically these proportions are very small and to ensure high precision for any estimated proportion, the sample size across the UK needs to be large.

The table below gives an indication of the level of precision which may be assumed, with 95% confidence, for an estimate of taxpayer numbers from a simple random sample as large as the 2015-16 SPI. It shows that for estimated populations of 2.5 million or more, the estimate will be within 1% of the true population with 95% confidence.

As the estimated population falls, the 95% Confidence Interval increases in size relative to the estimate (far right column). For a typical Parliamentary Constituency with an estimated taxpayer count of 46,000, the true figure may lie between 42,000 and 50,000. The error could be +/- 8% of this estimate. For a large Parliamentary Constituency, the error may be about 4,000 (7% of the estimate), while for a small constituency, the error may be 3,000 (about 9%).

Survey of Personal Incomes: Confidence Intervals for estimates of taxpayer numbers ⁽¹⁾

Geographical area	Estimated value	Confidence Limits		95% Confidence Interval (+/-)	As % of estimate
		Lower limit	Upper limit		
	Number (thousands)	Number (thousands)		Number (thousands)	
Government Office Region (medium)	2,500	2,475	2,525	25.0	1.00%
County (large)	500	488	512	11.6	2.32%
County (small)	200	193	207	7.4	3.69%
Parliamentary Constituency					
Large	57	53	61	4.0	6.93%
Medium	46	42	50	3.6	7.72%
Small	34	31	37	3.1	8.98%

⁽¹⁾Assumes a taxpayer population of 29 million and a simple random sample of 400,000.

In practice, estimates will reflect the more complex SPI sample design.

Broadly speaking, as sample size changes by a factor x , the Confidence Interval will change by a factor $1/\sqrt{x}$, so a fourfold increase in sample size will halve the Confidence Interval.

Year on year changes in published estimates of taxpayer numbers within small geographical areas (e.g. districts and constituencies) should be viewed with caution. They involve measuring small differences between two very small proportions. The Confidence Interval for the difference could be large relative to the measured difference, so any observed change may be due to sampling fluctuation alone.

Similar precision, or relative precision, to that shown in the table above in estimates for subsets of taxpayers (e.g. pensioners or higher rate taxpayers) in small geographical areas (e.g. districts and constituencies) requires even greater national samples, far in excess of the present sample size of the SPI. Estimates in such detail are not considered sufficiently reliable to be published.

Confidence Intervals around estimates at the sub-UK level

(Tables 3.13a, 3.14a and 3.15a)

Tables 3.13a, 3.14a and 3.15a show the upper and lower limits of the 95% confidence interval associated with the sub-UK level estimates.

Confidence intervals for taxpayer numbers, mean incomes and amounts are symmetric about the central estimate (i.e. the upper and lower confidence limits are equidistant from the central estimate), but the confidence intervals for median incomes is asymmetric. The reason for this is that, after estimating the median income level (M), which 50% of the population is expected to exceed, a 95% confidence interval is calculated for the proportion of the population with incomes in excess of M . This confidence interval is symmetric about 50% -say $(50+x)\%$ to $(50-x)\%$. The income levels associated with $50+x\%$ and $50-x\%$ are estimated from the sample, say $M+$ and $M-$. In typical income distributions, the distance from M to $M+$ will usually exceed the distance from M to $M-$ because there are progressively fewer individuals at higher levels of income.

The confidence interval estimates have been calculated without rounding. When displayed using the standard rounding convention, the confidence intervals (for numbers, means and amounts) may not appear to be symmetrical around the central estimate.

Methodological Changes since the 2014-15 SPI

Changes to the PAYE Data

There have been no changes to the PAYE data.

Changes to the Self Assessment Data

There have been no changes to the Self Assessment data.

Changes to the Claims Data

There have been no changes to the claims data.

Changes to the Imputation Process

There have been no changes to the imputation process.

Annex C: Glossary of Terms

Annex C aims to explain acronyms, abbreviations and terms associated with personal incomes and income tax liabilities.

Allowances

The amount of income which an individual can receive before being liable for income tax. The personal allowance is an example of an allowance.

Average rate of tax

The ratio of income tax liability to total income, where income is measured before deductions, reliefs and allowances.

Basic rate limit

The highest income point for taxable income (after allowances) at which basic rate income tax is charged.

CESA (Computerised Environment for Self Assessment)

The computer system used to administer Self Assessment from which SA data for the SPI has been extracted since 1996-97. See Self Assessment (SA).

COP (Computerisation of PAYE)

The computer system which used to administer PAYE until it was replaced by NPS and from which PAYE data for the SPI was extracted for tax years 1997-98 to 2007-08 inclusive.

Deductions and Reliefs

Amounts deducted from total income, along with personal allowances to arrive at the amount of taxable income subject to an income tax charge. This includes amounts for contributions to occupational and personal pensions, and a variety of other Deductions and Reliefs including charitable giving and loss relief etc.

Dividend Income

Income derived from shares.

Geographical Areas

Some tables present information for sub-UK areas described as Government Office Region, County, District and Parliamentary Constituency. Administrative and Political geographical areas are not held on taxpayers' records. For the SPI, the areas are attached by matching the individual's postcode to the Office for National Statistics Postcode Directory.

Industry

Industry categories are based on UK Standard Industrial Classification of Economic Activities 2007 (SIC2007). Income from self employment (sole trade and partner) is assigned an industry using the business text descriptions supplied on Self Assessment Returns.

National Insurance and PAYE System (NPS)

NPS is the computer system HMRC uses to administer PAYE. It replaced COP and is the source of PAYE data for SPI for tax year 2008-09 onwards.

National Insurance Recording System 2 (NIRS2)

The computer system used to monitor payment of National Insurance (NI) contributions and to calculate and prove entitlement to contributory benefits. These include Job Seekers Allowance (JSA) and the National Insurance Pension. It provides contribution information to a number of government departments.

P14s

Form P14 is an End of Year summary for an employment that is submitted by the employer to HMRC, showing pay, tax and NI contributions for the year. The employer provides similar information to the employee on an end of year certificate, form P60.

Pay As You Earn (PAYE)

PAYE is the system used by HMRC to collect and account for income tax on earnings from employment and pensions. Income Tax and National Insurance Contributions are deducted by the employer and paid over to HMRC on behalf of the individual for each pay period.

Personal Allowance

The amount of income you can receive for the tax year without having to pay tax on it.

Savings Income

A particular class of income that includes interest on bank and building society accounts.

Self Assessment (SA)

SA is a system where an individual declares their income and can calculate their own income tax due after the end of the tax year. Taxpayers included in SA can be higher earners, self-employed and taxpayers with complex tax affairs.

Starting rate limit/Starting rate for savings limit

The highest income point for taxable income (after allowances) at which starting rate income tax is charged. From 2008-09 the starting rate was abolished for non-savings income and applied only to non-dividend savings income.

Superannuation contributions

The regular amounts paid by an employee into an employer occupational pension fund; these are deducted from the employee's salary. Superannuation contributions to an authorised fund or scheme are not liable to income tax and the employer would deduct the amount of superannuation contributions from the gross pay before assessing the income tax liability through PAYE.

Survey of Personal Incomes (SPI)

An annual survey of individuals who could be liable for income tax derived from HMRC administrative systems holding data on persons within PAYE, SA and income tax claims.

Tax liabilities

The amount of income tax due on taxable income after applying tax rates to the tax base. The income tax liability for each sample case in SPI is calculated by reference to the amounts of income by type, deductions and reliefs and the tax regime parameters that apply for the year. The calculated liability for a tax year will differ from the amount of tax receipts collected in a financial year.

Tax receipts

The amount of income tax collected by HMRC. The SPI measures the amount of income tax liability for a tax year, but not the amount of receipts in the financial year.

Taxable income

Income assessable to income tax after allowances.

Taxpayer

An individual calculated to have a positive income tax liability for the tax year, based on the income, allowances, reliefs and deductions for the year.

Total income

The sum of an individual's components of income taken into account in calculating income tax. This includes earnings from employment, profits from self-employment, pension income, some social security benefits, savings income, income from shares (dividends), rental income, and income paid from trusts. It excludes:

- gains from the disposal of assets that are classified as capital gains
- interest, dividends or bonuses from tax exempt investments (for example, ISAs and National Savings & Investments Savings Certificates)
- interest and terminal bonuses from Save As You Earn Schemes
- Premium Bond, National Lottery and gambling prize winnings

Total income is calculated before relief for contributions to occupational and personal pensions, other deductions and reliefs or personal allowances.

In the tax system, income is streamed into three main categories: dividends; savings income (not dividends); and non-savings income as different rules apply.
