Programme Impact and Outcomes

Impact: Improved efficient urban development that fosters greater productivity in cities

Governance and Planning

Improved connectivity through better governance and planning mechanisms for urban mobility services within Mexico's cities

Implementation and Delivery

Improved connectivity through the implementation of technologies to deliver better urban mobility services in Mexico's cities

Governance and Planning

1. Improved connectivity through better governance and planning mechanisms for urban mobility services within Mexico's cities

1.11 Integrated transport oriented development planning strategies amongst transport authorities in cities

1.12 Integrated operations and data sharing protocols between departments

Implementation and Delivery

2. Improved connectivity through the implementation of technologies to deliver better urban mobility services in Mexico's cities

2.1 Piloting of integrated transport systems in **three cities** that respond to suitable transport oriented development recommendations

Incubator

Incubator activities

Infrastructure

Development of policy frameworks for the implementation of BIM methodology.

Mobility

Support in the development of a national electromobility strategy;
Roadmap for the implementation of an electromobility pilot project.

Digitalisation

Support the design of a legislative framework for Artificial Intelligence and Digital Governance in Mexico;
Support the Development of a Hub that focuses on Artificial Intelligence and open and big data.
